Instructional Technology Barbara B. Seels, Rita C. Richey, 2012-10-01. The Association officially endorses this definition of Instructional Technology, which has been developed over three years by the Committee on Definition and Terminology. The Association recognizes that other theoretical frameworks exist and that these are valid but believes that

these are part of the more inclusive theoretical framework of Instructional Technology used in this definition. In making this definition and the document explaining it available we hope to help other organizations clarify their relationship to the broad field of Instructional Technology. Although the Association offers this definition as its current position it is committed to a continuous reevaluation of the definition and to revising and publishing it so that it reflects changing concepts and terminology. A document of this magnitude can only be produced as the result of the dedication and effort of the persons who formed the committee and of its chairperson Barbara Seels and her collaborator Rita C Richey. Without their energies, skill, perseverance and willingness to risk stating their perceptions in this format we could not have offered this document. Whether or not we agree with the statements presented here they will provide a benchmark and a point of dialogue for further development of a profession which seeks to provide conditions for effective learning.

The Evolution of American Educational Technology Paul Saettler, 2004-03-01. The primary purpose of this book is to trace the theoretical methodological foundations of American educational technology. It must be emphasized that this work is essentially a history of the process of educational technology rather than of products in the form of devices or media. Although media have played an important role in educational technology the reader should not lose sight of the central process which characterizes and underlies the true historical meaning and function of educational technology. Moreover the assumption is made that all current theory, methodology and practice rests upon the heritage of the past. Indeed a common problem in the field has been the failure in many instances to take adequate account of past history in planning for the present or the future. A related purpose of this book is to provide a selective survey of research in educational technology as it relates to the American public schools. Such research reviews are not intended to be comprehensive but were included because of their historical importance and their relevance in understanding the process of educational technology.
