In Synchrony with the Heavens, Volume 1 Call of the Muezzin David King,2004-02-01 This is

the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices Muslim Spain Reconsidered Richard Hitchcock, 2014-02-18 This introduction to Muslim Spain covers the period from 711 to 1502 giving readers a substantial overview of what it was that made it a unique and successful society and of its powerful legacy in the formation of modern Spain Using a chronological framework and pushing the main historical developments to the forefront the author keeps in view the shifting social patterns caused by the changing balance between town and country major and minor dynasties foreign groupings and repeated invasions from North Africa He also includes discussion of topics such as inter faith relations multi ethnic competing groups and how intellectual life was enriched by pluralism and influence from abroad

Journal of Islamic Science, 2005 Lost Maps of the Caliphs Yossef Rapoport, Emilie Savage-Smith, 2018-12-11 About a millennium ago in Cairo an unknown author completed a large and richly illustrated book In the course of thirty five chapters this book guided the reader on a journey from the outermost cosmos and planets to Earth and its lands islands features and inhabitants This treatise known as The Book of Curiosities was unknown to modern scholars until a remarkable manuscript copy surfaced in 2000 Lost Maps of the Caliphs provides the first general overview of The Book of Curiosities and the unique insight it offers into medieval Islamic thought Opening with an account of the remarkable discovery of the manuscript and its purchase by the Bodleian Library the authors use The Book of Curiosities to re evaluate the development of astrology geography and cartography in the first four centuries of Islam Their account assesses the transmission of Late Antique geography to the Islamic world unearths the logic behind abstract maritime diagrams and considers the palaces and walls that dominate medieval Islamic plans of towns and ports Early astronomical maps and drawings demonstrate the medieval understanding of the structure of the cosmos and illustrate the pervasive assumption that almost any visible celestial event had an effect upon life on Earth Lost Maps of the Caliphs also reconsiders the history of global communication networks at the turn of the previous millennium It shows the Fatimid Empire and its capital Cairo as a global maritime power with tentacles spanning from the eastern Mediterranean to the Indus Valley and the East African coast As Lost Maps of the Caliphs makes clear not only is The Book of Curiosities one of the greatest achievements of medieval mapmaking it is also a remarkable contribution to the story of Islamic civilization that opens an unexpected window to the medieval Islamic view of

Contemporary Issues in Islam Asma Afsaruddin, 2015-08-31 This book deals with certain hot button contemporary issues in Islam that are often the focus of public scrutiny including the Sharia jihad the caliphate women's status and interfaith relations Notably it places the discussion of these topics within a longer historical framework in order to reveal their multiple interpretations and contested applications over time Most public and some academic discourses however present the Islamic tradition as unchanging and therefore unable to respond to the modern world Such an ahistorical approach fosters the belief that Muslim and Western societies are destined to clash with one another In contrast this book allows the reader to see the diversity and transformations within Islamic thought over time Focusing on this internal diversity permits us to appreciate the scriptural and intellectual resources available within the Islamic tradition for responding to the challenges of modernity even as it interrogates and shapes modernity itself

Science Under Islam Sayyed M. Deen, 2007 The book describes the rise of science and technology in the Islamic Golden Age examines the causes that led to its decline reviews failed later attempts for its revival and finally discusses social and religious reformation needed for it to flourish in contemporary Muslim societies Social reformation covers rule of law democratic infrastructure and human rights while religious reformation involves the reinterpretation of scripture It is argued that without such a social and religious reformation Muslims a quarter of the earth's population will be less able to participate in the science driven 21st century world Note that Muslim leaders in the UK and elsewhere are not addressing the need of such an essential reformation without which Muslims as a people will remain in a limbo and thus continue to be vulnerable to extremist ideas Therefore this book should be a must for all those interested in the creation of a harmonious one world Look at www.scienceunderislam.com for more information
