**Global Bioethics** Ronald M. Green, Aine Donovan, Steven A. Jauss, 2008-11-06 Medical care and biomedical research are rapidly becoming global Ethical questions that once arose only in the narrow context of the physician patient relationship in relatively prosperous societies are now being raised across societies cultures and continents For example what should be the standard of care for clinical trials of medical innovations in poorer countries Are researchers obligated to compare new therapies or drugs with the best known ones available or can they use as a benchmark the actual treatments or lack of treatments available to poor people Should pharmaceutical companies seeking to lower the costs of new drug trials be allowed to enrol citizens of less developed countries in them even when those individuals cannot afford and will not be eligible for the resulting drugs More generally should the norms of medicine and research be the same across cultures or can they adapt to local social economic or religious conditions Global Bioethics gathers some of the world's leading bioethicists to explore many of the new questions raised by the globalization of medical care and biomedical research Among the topics covered are the impact of globalization on the norms of medical ethics the conduct of international research the ethics of international collaborations challenges to medical professionalism in the international setting and the relation of religion to global bioethics

**Contemporary Issues in Biomedical Ethics** John W. Davis, Barry Hoffmaster, Sarah J. Shorten, 2012-12-06 Not long ago a colleague chided me for using the term the biological revolution Like many others I have employed it as an umbrella term

to refer to the seemingly vast rapidly moving and frequently bewildering developments of contemporary biomedicine psychosurgery genetic counseling and engineering artificial heart lung machines organ transplants and on and on The real biological revolution he pointed out began back in the nineteenth century in Europe For it was then that death rates and infant mortality began to decline the germ theory of disease was firmly established Darwin took his famous trip on the Beagle and Gregor Mendel stumbled on to some fundamental principles of heredity My friend I think was both right and wrong The biological revolution did have its roots in the nineteenth century that is when it first began to unfold Yet like many intellectual and scientific upheavals its force was not felt for decades Indeed it seems fair to say that it was not until after the Second World War that the full force of the earlier discoveries in biology and medicine began to have a major impact an impact that was all the more heightened by the rapid biomedical developments after the war
