The Ends of Performance Peggy Phelan, Jill Lane, 1998 Bridging the gap between cultural studies performing arts and anthropology performance studies explores myriad ways in which performance creates meaning and shapes our everyday lives

End to End Performance Management on IBM i Hernando Bedoya, Mark Roy, Nandoo Neerukonda, Petri Nuutinen, IBM Redbooks, 2009-11-23 Monitoring and managing your system s performance is critical to ensure that you are keeping pace with the changing demands of your business To respond to business changes effectively your system must change too Managing your system at first glance might seem like just another

time consuming job But the investment soon pays off because the system runs more efficiently and this is reflected in your business It is efficient because changes are planned and managed Managing performance of any system can be a complex task that requires a thorough understanding of that system s hardware and software IBM i is an industry leader in the area of performance management and has many qualities that are not found in other systems such as Unparalleled performance metrics Always on collection of metrics Graphical investigation of performance data While understanding all the different processes that affect system performance can be challenging and resolving performance problems requires the effective use of a large suite of tools the functions offered by IBM i are intended to make this job easier for users This IBM Redbooks publication explains the tasks and rich tools associated with performance management on IBM i **Linux, Apache, MySQL, PHP Performance End to End** Colin McKinnon, 2015-01-10 LAMP Performance End To End is a guide to delivering great page speed while reducing server load and increasing capacity The book covers the entire journey of data from your server s disk to the mind of the end user explaining the critical bottlenecks along the way and providing practical solutions to performance problems Discover how SaaS backoffice systems need a different performance strategy from public facing websites what the currently undocumented Zend Opcode Optimizer flags actually do how to automate content optimization how to tune your TCP stack for mobile clients which MySQL architecture is right for you and more 112 000 words Links to 240 web published articles and videos 368 pages PDF version **High-End Performance with Low-End Hardware** Christopher Mollén, 2019-01-14 Massive MIMO multiple input multiple output is a multi antenna technology for cellular wireless communication where the base station uses a large number of individually controllable antennas to multiplex users spatially This technology can provide a high spectral efficiency One of its main challenges is the immense hardware complexity and cost of all the radio chains in the base station To make massive MIMO commercially viable inexpensive low complexity hardware with low linearity has to be used which inherently leads to more signal distortion This thesis investigates how the degenerated linearity of some of the main components power amplifiers analog to digital converters ADCs and low noise amplifiers affects the performance of the system with respect to data rate power consumption and out of band radiation The main results are Spatial processing can reduce PAR peak to average ratio of the transmit signals in the downlink to as low as 0B this however does not necessarily reduce power consumption In environments with isotropic fading one bit ADCs lead to a reduction in effective signal to interference and noise ratio SINR of 4dB in the uplink and four bit ADCs give a performance close to that of an unquantized system An analytical expression for the radiation pattern of the distortion from nonlinear power amplifiers is derived It shows how the distortion is beamformed to some extent that its gain never is greater than that of the desired signal and that the gain of the distortion is reduced with a higher number of served users and a higher number of channel taps Nonlinear low noise amplifiers give rise to distortion that partly combines coherently and limits the possible SINR It is concluded that spatial processing with a large number of antennas

reduces the impact of hardware distortion in most cases As long as proper attention is paid to the few sources of coherent distortion the hardware complexity can be reduced in massive MIMO base stations to overcome the hardware challenge and make massive MIMO commercial reality Massiv MIMO eng multiple input multiple output r en flerantennsteknologi f r cellu-
