unfinished businesses their impasses and their resistance to change The second purpose of the book is to help those therapists in therapy training by presenting the theory and methods of the Gestalt approach with examples and thus contribute to the raising of their therapeutic knowledge and skill levels

Chronicles of Care: A Design History of the COVID-19 Virus Paul A. Rodgers, Fernando Galdon, Craig Bremner, 2024-04-16 The Covid 19 crisis and the designed interventions that the authors have catalogued in this book prove definitively that design does care The authors documented this as it evolved every day from the 1st January 2020 to 31st May 2020 inclusive Then they looked at all of this care and caring from the point of view of design and by the sheer volume of design interventions they have documented illustrate that design is good in a crisis What the Covid 19 pandemic illustrated is that for the first time in modern history capital was totally irrelevant Money could not save your life Only design could Rapidly designed masks shelters hospitals instructional posters infographics dashboards respirators sanitisers virtual and local communities emerged to save us From January 2020 design became king The Covid 19 global pandemic presented an ontological reality design is more than margins or profit In fact design became extremely valuable when it stopped concentrating on those things and started to care about peoples lives This brief episode in history is still repositioning the status of design and reconfiguring its signifier from consumption to care The contents of this book cover the outbreak lockdown and the beginning of the reopening in the UK In between the book functions as a history of pandemic crisis design interventions As such it is a research in the moment project where we have illustrated our thoughts and insights in tables charts and diagrams We have accepted all design interventions as valid and given them the same role and status by presenting each of them in a standard format No curation No selection No position The task of critical analysis must follow perhaps by us certainly by others

The Psychology of Radicalization and Terrorism Willem Koomen, Joop Van Der Pligt, 2015-11-19 Terrorism and radicalization have a long history but in recent years their prominence has been a particularly conspicuous and influential feature of the global political landscape This important book presents an overview of the processes involved in radicalization and terrorism and introduces a systematic framework which captures the most crucial individual and social factors involved in determining these processes The authors begin by considering the possible role of prejudice economic deprivation and discrimination and the cognitive responses and emotions they can trigger Such responses tend in turn to increase the importance of group membership and promote intergroup differentiation and polarization a process which is often accompanied by more pronounced and more extreme religious and ideological beliefs The book also describes the role of cultural values and social climate in processes of radicalization as well as the role of personality factors and demographics such as age and marital status As for violent terrorist action itself this final most radical stage is elicited by a number of group factors such as groupthink isolation and leadership Certain cognitive mechanisms for example dehumanizing the target and attributing responsibility elsewhere can also provide excuses for violence The book explores why some groups turn to violence and others don't and it addresses

processes of disengagement deradicalization programs and other methods used to inhibit the spread of radicalization and terrorism The Psychology of Radicalization and Terrorism takes a unique and systematic approach to a vital topic integrating knowledge from diverse literatures and using social psychology as a basis for comprehending human behaviour It will be essential reading for students and researchers from all disciplines seeking a greater understanding of terrorism and violent political conflict in all its forms

The Evolution of Emotional Communication Eckart Altenmüller,Sabine Schmidt,Elke Zimmermann,2013-01-24 Why do we think that we can understand animal voices such as the aggressive barking of a pet dog and the longing meows of the family cat Why do we think of deep voices as dominant and high voices as submissive Are there universal principles governing our own communication system Can we even see how close animals are related to us by

constructing an evolutionary tree based on similarities and dissimilarities in acoustic signaling Research on the role of emotions in acoustic communication and its evolution has often been neglected despite its obvious role in our daily life When we infect others with our laugh soothe a crying baby with a lullaby or get goose bumps listening to classical music we are barely aware of the complex processes upon which this behavior is based It is not facial expressions or body language that are affecting us but sound They are present in music and speech as emotional prosody and allow us to communicate not only verbally but also emotionally This groundbreaking book presents a thorough exploration into how acoustically conveyed emotions are generated and processed in both animals and man It is the first volume to bridge the gap between research in the acoustic communication of emotions in humans with those in animals using a comparative approach With the communication of emotions being an important research topic for a range of scientific fields this book is valuable for those in the fields of animal behaviour anthropology evolutionary biology human psychology linguistics musicology and neurology
