**Developmental Psychobiology and Behavioral Ecology** Elliott M. Blass, 2012-12-06 The previous volume in this series Blass 1986 focused on the interface between developmental psychobiology and developmental neurobiology The volume emphasized that an understanding of central nervous system development and function can be obtained only with reference to the behaviors that it manages and it emphasized how those behaviors in turn shape central development The present volume explores another natural interface of developmental psychobiology behavioral ecology It documents the progress made by developmental psychobiologists since the mid 1970s in identifying capacities of learning and conditioning in birds and mammals during the very moments following birth indeed during the antenatal period These breakthroughs in a field that had previously lain dormant reflect the need to meet the infant where it is in order for behavior to emerge Accordingly studies have been conducted at nest temperature infants have been rewarded by opportunities to huddle suckle or obtain milk behaviors that are normally engaged in the nest In addition there was rejection of the excessive deprivation extreme handling and traumatic manipulation studies of the 1950s and 1960s that yielded information on how animals could respond to trauma but did not reveal mechanisms of normal development In their place has arisen a series of analyses of how naturally occurring stimuli and situations gain control over behavior and how specifiable experiences impose limitations on subsequent development Constraints were identified on the range of interactions that remained available to developing animals as a result of particular events

**Gesture and Multimodal Development** Jean-Marc Colletta, Michèle Guidetti, 2012-06-13 We gesture while we talk and children use gestures prior to words to communicate during the first year Later as words become the preferred form of communication children continue to gesture to reinforce or extend the spoken messages or even to replace them This volume originally published as a Special Issue of *Gesture* 10 2 3 2010 brings together studies from language acquisition and developmental psychology It provides a review of common theoretical methodological and empirical themes and the contributions address topics such as gesture use in prelinguistic infants with a special and new focus on pointing the relationship between gestures and lexical development in typically developing and deaf children and even how gesture can help to learn mathematics All in all it brings additional evidence on how gestures are related to language communication and mind development

**The Role of Behavior in Evolution** Henry C. Plotkin, 1988 These six original essays focus on a potentially important aspect of evolutionary biology the possible causal role of phenotypic behavior in evolution Balancing theory with actual or potential empiricism they provide the first full examination of this topic Plotkin's opening chapter outlines the conceptual minefields that the contributors attempt to negotiate What is an adequate theory of evolution What is behavior and is it possible to maintain a distinction between behavior and other attributes of the phenotype is all or only a

special subset of behavior both a cause and a consequence of evolution And what do the theoretical issues mean in empirical terms He concludes that any attempt to understand the causal role of behavior in evolution requires a more complicated theoretical structure than that of orthodox neoDarwinism a conceptualization of behavior as a distinctive set of phenotypic attributes and the accumulation of more data David L Hull Northwestern University provides an alternative account of the evolutionary process by developing a hierarchy of replicators interactors lineages to replace the traditional one of genes organisms species Robert N Brandon Duke University also posits hierarchy as an appropriate architecture for the theoretical complexity needed to support an examination of the role of behavior in evolution F J Odling Smee Brunei University outlines a theoretical structure to encompass the behavior of phenotypes concentrating on the unrestricted definition of behavior everything that an animal does The remaining chapters are as much concerned with evidence as with theory Plotkin concentrates on a restricted definition of behavior behavior that is a product of choosing intelligence reviewing our empirical knowledge of how learning might influence evolution R I M Dunbar University College London uses empirical studies of vertebrate social behavior to deal with the question of how the social systems especially of primates might have a causal role in species evolution A Bradford Book

### **Brain Mechanisms in**

**Problem Solving and Intelligence** Robert Thompson, Francis M. Crinella, Jen Yu, 2013-11-21 This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat. It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence. During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls. Under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability. Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities. Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain. One objective of this volume was to make these maps available in a single source. Another was to provide a description of learning syndromes arising from local lesions to different parts of the brain.

Searching Merrelyn Emery, 1999-12-15 Searching explains how to make the fundamental cultural change required for a desirable sustainable future. It describes the two stage model of open systems social science in action and covers two major methods: the Search Conference for strategic planning and community development and the Participative Design Workshop for the genotypical design and redesign of organizational structures. The result of nearly 50 years of integrated conceptual and practical development, Searching shows that by replacing 200 years of mechanistic assumptions with concepts and principles which accurately capture human and social realities, these methods

generate intrinsic motivation and release human potentials for change Starting with the building blocks of this internally consistent theoretical framework Part I explains the interrelations and shows how the power of the methods for achieving this cultural change is generated Part II of the book describes the methods and illustrates their flexibility by discussing some of their most common variations
