**Subject Guide to Books in Print**, 1997      **Mathematics in Action** Consortium for Foundation Mathematics, 2003-12

This introductory algebra text based on standards in the AMATYC Crossroads document motivates college math students to develop mathematical literacy and a solid foundation for future study in mathematics and other disciplines This second book of a three book series presents mathematical concepts and skills through relevant activities derived from real life situations these activities are meaningful to students because they illustrate how mathematics arises naturally from real world situations and problems The Mathematics in Action series is based on the assumption that students learn mathematics best by doing mathematics in a meaningful context Students take an active role in their own learning by working in groups thereby developing communication skills a sense of independence and a can do attitude about mathematics Technology is integrated throughout the book so that students learn to interpret real life data numerically symbolically and graphically Regardless of their level of preparation for the course students can use this text to increase their knowledge of mathematics
