In A Human Search:

Search Algorithms and Applications Nashat Mansour, 2011-04-26 Search algorithms aim to find solutions or objects with specified properties and constraints in a large solution search space or among a collection of objects. A solution can be a set of value assignments to variables that will satisfy the constraints or a sub structure of a given discrete structure. In addition, there are search algorithms mostly probabilistic that are designed for the prospective quantum computer. This book demonstrates the wide applicability of search algorithms for the purpose of developing useful and practical solutions to problems that arise in a variety of problem domains. Although it is targeted to a wide group of readers (researchers, graduate students, and practitioners), it does not offer an exhaustive coverage of search algorithms and applications. The chapters are organized into three parts: Population based and quantum search algorithms; Search algorithms for image and video processing; and Search algorithms for engineering applications.

Visual Search 2 A.G. Gale, K. Carr, D. Brogan, 2003-09-02 The concept of visual search embraces a wide range of processing activities from human cognitive phenomena to applied problems for both human and machine vision in industrial, medical, and military environments. This book, the second in the series, is derived from the series of international conferences on visual search organized under the auspices of the Applied Vision Association. It brings together research from a variety of disciplines, enabling the reader to share experiences at the cutting edge, accessing knowledge which might otherwise be locked away in specialist journals or grey literature.

AI and Robotics Applications in Disaster Response Menka Chopra, 2025-01-24 AI and Robotics Applications in Disaster Response explores the innovative use of artificial intelligence and robotics in managing emergency situations. We discuss how AI-driven tools and robotic systems can aid search and rescue missions, risk assessment, and disaster recovery operations. The book highlights real-world case studies, including the use of drones for disaster mapping and robots for hazardous material handling. We also address the ethical implications and challenges of deploying AI in critical situations. This book is an essential guide for emergency responders, policymakers, and technology enthusiasts aiming to leverage AI and robotics for disaster management.

Perspective provides readers with the necessary robotics and mathematical tools required to realize the correct architecture. The architecture discussed in the book is not confined to environment monitoring but can also be extended to search and rescue, border patrolling, crowd management and related applications. Several law enforcement agencies have already started to deploy UAVs but instead of using teleoperated UAVs, this book proposes methods to fully automate surveillance missions. Similarly, several government agencies like the US EPA can benefit from this book by automating the process. Several challenges when deploying such models in real missions are addressed and solved, thus laying stepping stones towards realizing the architecture proposed. This book will be a great resource for graduate students in Computer Science, Computer Engineering, Robotics, Machine Learning and Mechatronics. Analyzes the constant conflict between machine learning models and robot resources. Presents a novel range estimation framework tested on real robots, custom built and commercially available.

Being as Communion William A. Dembski, 2016-04-15 For a thing to be real it must be able to communicate with other things. If this is so, then the problem of being receives a straightforward resolution: to be is to be in communion. So the fundamental science, indeed the science that needs to underwrite all other sciences, is a theory of communication. Within such a theory of communication, the proper object of study becomes not isolated particles but the information that passes between entities. In *Being as Communion*, philosopher and mathematician William Dembski provides a non-technical overview of his work on information. Dembski attempts to make good on the promise of John Wheeler, Paul Davies and others that information is poised to replace matter as the primary stuff of reality. With profound implications for theology and metaphysics, *Being as Communion* develops a relational ontology that is at once congenial to science and open to teleology in nature. All those interested in the intersections of theology, philosophy and science should read this book.

Elements of Human Performance Andries Frans Sanders, 1998 The book focuses on 2 aspects of human performance: theory, reaction processes and attention. These aspects are often ignored by treatments of cognitive psychology but are central to understanding an individual's performance.
