Elements of Deductive Inference Joseph Bessie, Stuart Glennan, 2000 The text covers elementary logic from statement logic through relational logic with identity and function symbols The authors acquaint students with formal techniques at a level appropriate for undergraduates but extends far enough and deep enough into the subject that it is suitable for a brief first year graduate course The text covers full and brief truth tables and presents the method of truth consistency trees and natural deduction for the whole of elementary logic The text s organization allows instructors to cover just statement logic or statement logic combined with various extensions into predicate logic monadic logic with or without identity or the preceding plus relational logic with or without identity and with or without function symbols At each stage the instructor may elect to pursue truth trees and or natural deduction A final chapter provides a perspective for further study and applications of logic The text may be used with or without the accompanying software *Elements of Deductive Inference* Joseph
