Improving Database Usability And Responsiveness:

Improving Database Usability and Responsiveness Peter Scheuermann, 1982 The theme of usability and responsiveness has been enlarged to include new meanings of these words as they are reflected in a number of recent areas of database research Distributed database systems allow for decentralized control and location of data and they facilitate its usability by ensuring upward growth more reliability and faster access Semantic modeling has been accepted as an important tool in logical database design and in communication between users and designers In physical database design developments have occurred such as database machines which offload a substantial part of the work from the central processor to achieve more reliability and better performance The papers selected reflect these new interests and the continuing efforts to improve usability and responsiveness in query languages integrity concurrency consistency data translation and identification

Whinston, 2012-12-06 This volume is based on lectures presented at the N A T O Advanced Studies Institute on Data Base Management Theory and Applications The meeting took place in Estoril Portugal for a two week period in June 1981 The lecturers represented distinguished research centers in industry government and academia Lectures presented basic material in data base management as well as sharing recent developments in the field The participants were drawn from data processing groups in government industry and academia located in N A T O countries All participants had a common goal of learning about the exciting new developments in the field of data base management with the potential for application to their fields of interest In addition to formal lectures and the informal discussions among participants which are characteristic of N A T O AS gatherings participants had the opportunity for hands on experience in building application systems with a data base management system Participants were organized into groups that designed and implemented application systems using data base technology on micro computers The collection of papers is organized into four major sections The first section deals with various aspects of data modeling from the conceptual and logical perspectives These issues are crucial in the initial design of application systems *Gis: Technology And Applications: Proceedings Of The Far East Workshop On Geographic Information Systems* Beng Chin Ooi, Hongjun Lu, 1993-06-14

During the past decade we have witnessed the sharp increase in the use of Geographic Information Systems GIS for spatial data analysis particularly in the Far East This proceedings is a compilation of papers that range from advanced applications of GIS to the development of GIS The papers present new research problems and results experience and strategies in developing GIS projects Query Processing in

Database Systems W. Kim,D.S. Reiner,Don Batory,2012-12-06 This book is an anthology of the results of research and development in database query processing during the past decade The relational model of data provided tremendous impetus for research into query processing Since a relational query does not specify access paths to the stored data the database management system DBMS must provide an intelligent query processing subsystem which will evaluate a number of potentially efficient strategies for processing the query and select the one that optimizes a given performance measure The degree of sophistication of this subsystem often called the optimizer critically affects the performance of the DBMS Research into query processing thus started has taken off in several directions during the past decade The emergence of research into distributed databases has enormously complicated the tasks of the optimizer In a distributed environment the database may be partitioned into horizontal or vertical fragments of relations Replicas of the fragments may be stored in different sites of a network and even migrate to other sites The measure of performance of a query in a distributed system must include the communication cost between sites To minimize communication costs for queries involving multiple relations across multiple sites optimizers may also have to consider semi join techniques

Database Machines H.-O. Leilich, M. Missikoff, 2012-12-06 The International Workshop on Database Machines in Munich is the third of its kind preceeded by the meetings in Florence Sept 81 and San Diego Sept 82 The workshop is aimed at providing an interchange of ideas and experience on computer systems designed to perform database operations more efficiently than general purpose computers with a software database management system Many proposals have been published during the past 10 years but now several systems have been built and practically implemented and some are even commercially available so that confrontation with the real world is starting to occur The kinds of question which arise during this phase of coming to maturity are those involved with evaluation and measurement The emphasis of the workshop is therefore on performance evaluation and the respective modelling techniques and methodology Data flow and other new topics including algorithms are also treated with respect to performance and efficiency We are glad to be able to include some papers on existing commercial products from both the designer and the user viewpoints We hope to encourage critical comments in this field and have arranged a session with the title Where Database Machines Are Going to be followed by a panel dis ussion

Foundations of Data Organization Sakti P. Ghosh, Yahiko Kambayashi, Katsume Tanaka, 2012-12-06 Foundations of data organization is a relatively new field of research in comparison to other branches of science It is close to twenty years old In this short life span of this branch of computer science it has spread to all corners of the world which is reflected in this book This book covers new database application areas databases for advanced applications and CAD VLSI databases computational geometry file allocation distributed databases database models including non traditional database models database machines query processing physical structures for relational databases besides traditional file organization hashing index file organization mathematical file organization and consecutive retrieval property in order to identify new trends of database research The papers in this book originally represent talks given at the International Conference on Foundations of Data Organization which was held on May 21 24 1985 in Kyoto Japan This conference was held at Kyoto University and sponsored by the organizing committee of the International Conference on Foundations of Data Organization and the Japan Society for the Promotion of Science The conference was in cooperation with ACM SIGMOD IEEE Computer Society Information

Design of Office Information Systems Clarence A. Ellis, Najah Naffah, 2012-12-06 The goal of this book is to present a framework within which the myriad of office technologies and office systems design techniques can be better understood There are a number of office books which deal with the social organizational aspects of office automation or with office equipment introduction strategies This book differs from those in that it is written by technical computer people for technical computer people As such it assumes a general computer literacy and contains a technical emphasis with a social fiber woven in Besides the framework we also present the current state of office primitives office tools and office technology We cover relevant work on going by international standards bodies and we discuss the concepts that are emerging or which we feel will be emerging from universities and industrial research laboratories Office technologies and techniques are classified as personal environment aids versus communal environment aids We now fully realize how difficult it is to write a coherent book within this fuzzy interdisciplinary rapidly changing field Concepts have been stressed wherever possible there are some sub areas where the generalizing concepts have not yet emerged We also realize the potential danger of obsolescence We have tried to combat this somewhat by the presentation of concepts generic tool design and emphasizing our framework This book is not a substitute for reading of the current periodical literature that is where the most timely information lies

Data Structures for Raster Graphics Laurens R.A. Kessener, Frans J. Peters, Marloes L.P. van Lierop, 2012-12-06 Raster graphics differs from the more traditional vector or line graphics in the sense that images are not made up from line segments but from discrete elements orderly arranged in a two dimensional rectangular region There are two reasons for the growing popularity of raster graphics or bit mapped displays 1 the possibilities they offer to show extremely realistic pictures 2 the dropping prices of those displays and associated processors and memories With the rise of raster graphics all kinds of new techniques methods algorithms and data representations are associated such as ray tracing raster operations and quadrees bringing with them a lot of fruitful research As stated above raster graphics allows to create extremely realistic synthesized pictures There are important applications in such diverse areas as industrial design flight Simulation education image processing and animation Unfortunately many applications are hampered by the fact that with the present state of the art they require an excessive amount of computing resources Hence it is worthwhile to investigate methods and techniques which may be of help in reducing computer costs associated with raster graphics applications Since the choice of data structures influences the efficiency of algorithms in a crucial way a workshop was set up in order to bring together a limited number of experienced researchers to discuss this topic The workshop was held from 24 to 28 June 1985 at Steensel a tiny village in the

neighbourhood of Eindhoven the Netherlands
