Fieldwork in Geography: Reflections, Perspectives and Actions Rod Gerber, Goh Kim Chuan, 2013-03-14

Geographers regard fieldwork as a vital instrument for understanding our world through direct experience for gathering basic data about this world and as a fundamental method for enacting geographical education The range of international geography and educational experts who contributed to this volume has demonstrated that the concept of fieldwork has a considerable history in the field of geography They have demonstrated that the theoretical aspects of fieldwork have been interpreted differently in regions around the world but the importance of fieldwork remains strong globally A fresh look at the pedagogic implications for fieldwork in formal education offers ideas both for promoting it in geographical education and for maintaining its place in the geography curriculum Audience Forward looking geographers and educators now recognise that alternative strategies especially those involving the use of information technology should be developed to reaffirm the centrality of fieldwork in geographical and wider education

Wu,Tricia Seow,Kim Irvine,2018-05-08 This book provides a collection of critical pieces that support the idea that good teaching and learning of geography in fieldwork and using technology should consider the dimensions of curriculum design instructional design and resource provision as well as assessment for such learning activities Further it clearly describes the thinking experiences and critical comments concerning two broad areas of learning outside the traditional classroom in the field and with technology *Geography, Culture and Education* Rod Gerber,M. Williams,2013-04-17 An important challenge for our world is to understand how cultural understanding and geographical education can be linked and used to improve the global society We readily accept that our world is constituted by numerous groups of people who are organised by committees tribes regions nations or continental entities How these groups interact show concern for each others well being and progress is still an unpredictable activity Intercultural tensions racial conflicts and religious clashes have all led to the challenges for enacting a constructive world Fundamental perspectives challenge moderate ones and the resulting tensions

produce elements of fear doubt and distrust The extremist views of terrorist groups exaggerate these tensions to the extent that some different cultural groups do not prefer to live in peace with their neighbours Deep seated intercultural tensions predominate over peaceful co existence Such challenges may easily dominate the interaction between racial groups tribes indigenous peoples and colonisers However we know that through the sound practice of intercultural understanding cultural groups in different contexts around the world can interact and co exist successfully and productively In fact they can work together to seek to improve their society This does not mean that one group will dominate the other Rather it means that both groups work together to improve their collective lives Education has played an important role in the long term achievement of such harmony This volume has been developed to demonstrate that geographical education can be a potent force in the development of cultural understanding in different societies *Researching Geography* Gopal Krishan,Nina Singh,2019-08-21 This book is a one stop comprehensive guide to geographical inquiry The volume traces the step by step account of the whys and the hows of research methodology introduces complexities of the geographical perspective selection of research topic choice of supervisor and formulation of research proposal fine tunes the sequence of data collection analysis representation and interpretation and spells out the skill of writing research with geographic flavour and reinforces concepts and ideas with examples so as not to leave any scope for ambiguity The second edition updates on the variety of emerging perspectives in geographic research use of spatial technologies in practice sampling at different spatial levels and insightful interpretation of data Lucid engaging and accessible this book will be an essential companion for researchers and students of geography social sciences and South Asian studies **Unifying Geography** David T. Herbert,John A. Matthews,2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus Unifying Geography focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline Unifying Geography will give the discipline renewed strength and direction thus improving its status both within and outside geography
