behavior a specific illness or health problem or a single set of determinants One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change The book is thus organized primarily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks the second part moves from smaller to larger systems informing the reader about basic research that demonstrates how health behavior is determined by personal family social institutional and cultural factors These distinctions reflect some arbitrariness the family organizations and institutions for example are social units
