Field Linguistics William J. Samarin, 1967 Non Aboriginal material *Field Linguistics* Terry Crowley, 2007-01-18
Crowley's voice of experience brings us the best practical fieldwork guide to date. Sensible, frank and comprehensive, this book prepares beginning field workers for the rigours ahead and will save years of costly trial and error. N. J. Enfield. This book is a comprehensive practical guide to field linguistics. It deals in particular with the problems arising from the documentation of endangered languages. Deploying a mixture of methodology and practical advice and drawing on his own immense experience, Terry Crowley shows how to record, analyse and describe a language in the field. He covers the challenges and problems the researcher is likely to encounter, offers guidance on issues ranging from ethics to everyday diplomacy and provides full discussions of corpus elicitation, how to keep track of data, salvage fieldwork dealing with unexpected circumstances and many other central topics. We all learn by our mistakes, he writes, and I have plenty of my own to share with you. **Field Linguistics** William J. Samarin, 1976 Linguistic Fieldwork Jeanette Sakel, Daniel L. Everett, 2012-02-02
A handy beginner's guide, this textbook introduces the various stages of linguistic fieldwork from the preparation of the work to the presentation of the results. Drawing on over forty years of fieldwork experience between them in over two dozen languages, the authors pack the book with examples and anecdotes from their experiences and include practical exercises for students to test what they have learned. Independent of any particular perspective, the methods can be applied to a wide range of fieldwork settings for projects with very different theoretical backgrounds and without the need to travel too far. The book covers traditional fieldwork such as language description and documentation as well as less typical methods including language contact and quantitative studies with experiments or questionnaires. Linguistic Fieldwork C. Bowern, 2015-02-10
Linguistic Fieldwork offers practical guidance on areas such as applying for funding, the first session on a new language, writing up the data and returning materials to communities. This expanded second edition provides new content on the results of research on prosody, elicitation on field experiment design and on working in complex syntax.

Causatives and Causation Jae Jung Song, 2014-06-11

Causatives and Causation is the first comprehensive study of causative constructions found in the world's languages. This important new research based on a data base of more than 600 languages not only investigates fully the richness and variety of causative types but also presents an alternative perspective to the traditional typological approach. The new typology enables a better understanding of how the human mind cognizes causation and how this is reflected in language. Causatives and Causation is also an important attempt to integrate language typology with diachrony by constructing a diachronic model of causative affixes on the basis of this new typology. Drawing on the theoretical insight of Role and Reference Grammar, this book provides a case study of the causative constructions in Korean providing additional support for both the proposed new typology and the diachronic model. It also examines the pragmatic foundations of causatives, an important but previously unexplored area of study.

Child Language Barbara C. Lust, 2006-09-21. The remarkable way in which young children acquire language has long fascinated linguists and developmental psychologists alike. Language is a skill that we have essentially mastered by the age of three and with incredible ease and speed despite the complexity of the task. This accessible textbook introduces the field of child language acquisition, exploring language development from birth. Setting out the key theoretical debates, it considers questions such as what characteristics of the human mind make it possible to acquire language, how far acquisition is biologically programmed and how far it is influenced by our environment, what makes second language learning in adulthood different from first language acquisition and whether the specific stages in language development are universal across languages. Clear and comprehensive, it is set to become a key text for all courses in child language acquisition within linguistics, developmental psychology and cognitive science.

People Studying People

Robert A. Georges, Michael O. Jones, 1980-03-13. The authors of this book demonstrate that fieldwork is first and foremost a human pursuit. They draw upon published and unpublished accounts of fieldworkers' personal experiences to develop the thesis that an appreciation of fieldwork as a unique mode of inquiry depends upon an understanding of the role the human element plays in it. They analyze the processes involved when people study people firsthand, focusing upon the recurrent human problems that arise and must

be solved The human processes and problems they argue are common to all fieldwork regardless of the disciplinary backgrounds or the specific interests of individual researchers

The Bilingual Mind Aneta Pavlenko, 2014-02-06 If languages influence the way we think do bilinguals think differently in their respective languages And if languages do not affect thought why do bilinguals often perceive such influence For many years these questions remained unanswered because the research on language and thought had focused solely on the monolingual mind Bilinguals were either excluded from this research as unusual or messy subjects or treated as representative speakers of their first languages Only recently did bi and multilinguals become research participants in their own right Pavlenko considers the socio political circumstances that led to the monolingual status quo and shows how the invisibility of bilingual participants compromised the validity and reliability of findings in the study of language and cognition She then shifts attention to the bilingual turn in the field and examines its contributions to the understanding of the human mind
