**Meeting** Nina Kiriki Hoffman, 2011-08-04 When Maya Andersen and her family moved to Spores Ferry, Oregon, they didn't know there'd be magic right next door. Their new neighbors in the Janus House Apartments all have unusual powers, and the basement is a Grand Central Station to other worlds. Maya and her alien companion Rimi are learning how to live together and how to keep their secret, which becomes a lot harder as they help the Janus Housers track down the Krithi, the race who snatched Rimi from her home planet in an attempt to rule the universe. *Welcome to My World* Chris Boone Cleveland, 2004 Methods professors and other professionals in education try to prepare education majors for the world that awaits them after graduation, but in *Welcome to My World: A Strategy Guide for New Teachers*, author Chris Cleveland puts the new teacher directly into his or her first classroom and answers all the questions a first-year teacher may ask. The book serves as a practical and immediately useful guide for new teachers, as Cleveland touches on everything from preparing the classroom for students to creating an effective learning environment. In order to be successful, a teacher can convince the students that their education is paramount; then the students and the teacher can reap unbelievable educational and personal rewards. Cleveland can help new teachers get started on the right path to successfully educating young people. In addition, veteran teachers whose desire to excel has been thwarted by the realities of teaching will likely find answers in *Welcome to My World*, as to where and why their enthusiasm has dwindled and will remember how important their initial goal was.

**Working on Mars** William J. Clancey, 2012 Beginning in 2004, a team of geologists and other planetary scientists did field science in a dark room in Pasadena, exploring Mars from NASA's Jet Propulsion Laboratory (JPL) by means of the remotely operated Mars Exploration Rovers (MER). Clustered around monitors, living on Mars, time painstakingly plotting each movement of the rovers and their tools, sensors, and cameras, these scientists reported that they felt as if they were on Mars themselves, doing field science. The MER created a virtual experience of being on Mars. This book examines how the MER has changed the nature of planetary field science. NASA cast the rovers Spirit and Opportunity as robotic geologists and ascribed machine initiative to remotely controlled actions. Clancey argues that the actual explorers were not the rovers but the scientists who imaginatively projected themselves into the body of the machine to conduct the first overland expedition of another planet. The author investigates how the design of the rover mission enables field science on Mars, explaining how the

scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them
