Fields, Networks, Computational Methods, and Systems in Modern Electrodynamics Peter Russer, Mauro Mongiardo, 2014-01-15 Fields, Networks, Computational Methods, and Systems in Modern Electrodynamics Peter Russer, Mauro Mongiardo, 2013-04-17 On June 1st 2004 the Faculty of Electrical Engineering and Information Technology of the Technische Universität München bestowed the degree of the doctor honoris causa to Leopold B Felsen for extraordinary achievements in the theory of electromagnetic fields On this occasion on June 1st and 2nd 2004 at the Technische Universität München a symposium on Fields Networks Computational Methods and Systems A Modern View of Engineering Electrodynamics in honor of Leopold B Felsen was organized The symposium topic focused on an important area of Leopold Felsen research interests and as the title emphasizes on a modern view of applied Electrodynamics While the fundamental physical laws of electrodynamics are well known research in this field is experiencing a steady continuous growth The problem solving approaches of say twenty years ago may seem now fairly obsolete since considerable progress has been made in the meantime In this monograph we collect samples of present day state of the art in dealing with electromagnetic fields their network theory representation their computation and finally on system applications The network formulation of field problems can improve the problem formulation and also contribute to the solution methodology Network theory systematic approaches for circuit analysis are based on the separation of the circuit into the connection circuit and the circuit elements Many applications in science and technology rely on computations of the electromagnetic field in either man made or natural complex structures Deutsche Nationalbibliografie ,2005 *Mathematical Reviews* ,2005 Time Domain Methods in Electrodynamics Peter Russer, Uwe Siart, 2010-11-19 This book consists of contributions given in honor of Wolfgang J R Hoefer Space and time discretizing time domain methods for electromagnetic full wave simulation have emerged as key numerical methods in computational electromagnetics Time domain methods are versatile and can be applied to the solution of a wide range of electromagnetic field problems Computing the response of an electromagnetic structure to an impulsive excitation localized in space and time provides a comprehensive characterization of the electromagnetic properties of the structure in a wide frequency range The most important methods are the Finite Difference Time Domain FDTD and the Transmission Line Matrix TLM methods The contributions represent the state of the art in dealing with time domain methods in modern engineering electrodynamics for electromagnetic modeling in general the Transmission Line Matrix TLM method the application of network concepts to electromagnetic field modeling circuit and system applications and finally with broadband devices systems and measurement techniques **Computational Methods in Electromagnetic Compatibility** Dragan Poljak, Khalil El Khamlichi Drissi, 2018-05-10 Offers a comprehensive overview of the recent advances in the area of computational electromagnetics Computational Method in Electromagnetic Compatibility offers a review of the most recent advances in computational electromagnetics The authors noted experts in the field

examine similar problems by taking different approaches related to antenna theory models and transmission line methods. They discuss various solution methods related to boundary integral equation techniques and finite difference techniques. The topics covered are related to realistic antenna systems including antennas for air traffic control or ground penetrating radar, antennas grounding systems such as grounding systems for wind turbines, biomedical applications of electromagnetic fields such as transcranial magnetic stimulation and much more. The text features a number of illustrative computational examples and a reference list at the end of each chapter. The book is grounded in a rigorous theoretical approach and offers mathematical details of the formulations and solution methods. This important text provides a trade off between a highly efficient transmission line approach and antenna theory models providing analysis of high frequency and transient phenomena. Contains the newest information on EMC analysis and design principles. Discusses electromagnetic field coupling to thin wire configurations and modeling in bioelectromagnetics. Written for engineering students, senior researchers and practicing electrical engineers. **Computational Method in Electromagnetic Compatibility** provides a valuable resource in the design of equipment working in a common electromagnetic environment.

Computational Methods for Electromagnetic Phenomena Wei Cai, 2013-01-03. The state of the art numerical methods described include Statistical fluctuation formulae for the dielectric constant, Particle Mesh Ewald, Fast Multipole Method and image based reaction field method for long range interactions, High order singular hypersingular Nyström collocation, Galerkin boundary and volume integral methods in layered media for Poisson Boltzmann electrostatics, electromagnetic wave scattering and electron density waves in quantum dots, Absorbing and UPML boundary conditions, High order hierarchical Nd-lec edge elements, High order discontinuous Galerkin, DG and Yee finite difference time domain methods, Finite element and plane wave frequency domain methods for periodic structures, Generalized DG beam propagation method for optical waveguides, NEGF Non equilibrium Green's function and Wigner kinetic methods for quantum transport, High order WENO and Godunov and central schemes for hydrodynamic transport, Vlasov Fokker Planck and PIC and constrained MHD transport in plasmas.

Computational Methods for Electromagnetic and Optical Systems Partha P. Banerjee, John M. Jarem, 2000-06-28. This text introduces and examines a variety of spectral computational techniques including k space theory, Floquet theory and beam propagation that are used to analyze electromagnetic and optical problems. The book also presents a solution to Maxwell's equations from a set of first order coupled partial differential equations.

Electromagnetic Field Computation by Network Methods Leopold B. Felsen, Mauro Mongiardo, Peter Russer, 2009-03-05. In this monograph the authors propose a systematic and rigorous treatment of electromagnetic field representations in complex structures. The architecture suggested in this book accommodates use of different numerical methods as well as alternative Green's function representations in each of the

subdomains resulting from a partitioning of the overall problem The subdomains are regions of space where electromagnetic energy is stored and are described in terms of equivalent circuit representations based either on lumped element circuits or on transmission lines Connection networks connect the subcircuits representing the subdomains The connection networks are lossless don t store energy and represent the overall problem topology This is similar to what is done in circuit theory and permits a phrasing of the solution of EM field problems in complex structures by Network oriented methods
