*EUDISED European educational research yearbook*, 1996      **Why Science Needs Art** Richard A. P. Roche, Roche Richard, Sean Commings, Francesca Farina, 2018 *Why Science Needs Art* explores the complex relationship between these seemingly polarised fields Reflecting on a time when art and science were considered inseparable and symbiotic pursuits the book discusses how they have historically informed and influenced each other before considering how public perception of the relationship between these disciplines has fundamentally changed Science and art have something very important in common they both seek to reduce something infinitely complex to something simpler Using examples from diverse areas including microscopy brain injury classical art and data visualization the book delves into the history of the intersection of these two disciplines before considering current tensions between the fields The emerging field of neuroaesthetics and its attempts to scientifically understand what humans find beautiful is also explored suggesting ways in which the relationship between art and science may return to a more co operative state in the future *Why Science Needs Art* provides an essential insight into the relationship between art and science in an appealing and relevant way Featuring colorful examples throughout the book will be of interest to students and researchers of neuroaesthetics and visual perception as well as all those wanting to discover more about the complex and exciting intersection of art and science      **D'Arcy Wentworth Thompson's Generative Influences in Art, Design, and Architecture** Ellen K. Levy, Charissa N. Terranova, 2020 Scottish zoologist D Arcy Wentworth Thompson's visionary ideas in *On Growth and Form* continue to evolve a century after its publication aligning it with current developments in art and science Practitioners theorists and historians from art science and design reflect on his ongoing influence Overall the anthology links evolutionary theory to form generation in both scientific and cultural domains It offers a close look at the ways cells organisms and rules become generative in fields often otherwise disconnected United by Thompson's original exploration of how physical forces propel and shape living and nonliving forms essays range from art art history and neuroscience to architecture design and biology Contributors explore how translations are made from the discipline of biology to the cultural arena They reflect on how Thompson's study relates to the current sciences of epigenesis self organization biological complex systems and the expanded evolutionary synthesis Cross disciplinary contributors explore the wide ranging aesthetic ramifications of these sciences A timeline links the history of evolutionary theory with cultural achievements providing the reader with a valuable resource
