Scott M. Gelber,2011-09-28 The University and the People chronicles the influence of Populism a powerful agrarian movement on public higher education in the late nineteenth century Revisiting this pivotal era in the history of the American state university Scott Gelber demonstrates that Populists expressed a surprising degree of enthusiasm for institutions of higher learning More fundamentally he argues that the mission of the state university as we understand it today evolved from a fractious but productive relationship between public demands and academic authority Populists attacked a variety of elites professionals executives scholars and seemed to confirm academia's fear of anti intellectual public oversight The movement's vision of the state university highlighted deep tensions in American attitudes toward meritocracy and expertise Yet Populists also promoted state supported higher

education with the aims of educating the sons and sometimes daughters of ordinary citizens blurring status distinctions and promoting civic engagement Accessibility utilitarianism and public service were the bywords of Populist journalists legislators trustees and sympathetic professors These academic populists encouraged state universities to reckon with egalitarian perspectives on admissions financial aid curricula and research And despite their critiques of college ivory towers Populists supported the humanities and social sciences tolerated a degree of ideological dissent and lobbied for record breaking appropriations for state institutions *The History of Science in the United States* Marc Rothenberg,2001 Annotation This Encyclopedia examines all aspects of the history of science in the United States with a special emphasis placed on the historiography of science in America Contains more than 500 entries written by experts in the field **The Agricultural Scientific Enterprise** Lawrence M Busch,William B Lacy,2019-07-11 The State Agricultural Experiment Stations have played a fundamental role in the development of science and agriculture in the United States From their inception in 1887 the experiment stations have attempted to wed basic research with practical application and have helped institutionalize a utilitarian approach to agricultural science Agricultural research and the new technology it helped to generate were major factors in the transformation of U S agriculture into a high technology mechanized science based industry Moreover the experiment stations as the first large scale publicly supported scientific research institutions in the United States have also long been models for scientific institutions both here and abroad Compiled for the 1987 centennial of the State Agricultural Experiment Stations this volume critically examines past performance current issues and future directions for public agricultural research in the United States Each of the authors drawn from disciplines as diverse as philosophy and agronomy focuses on a central concern for the scientific enterprise Issues include priority setting maintaining and promoting disciplinary and interdisciplinary effectiveness supporting higher education for agriculture and efficacious dissemination of research findings By setting these issues in their historical and philosophical context the volume suggests new approaches for meeting the continuing challenge to achieve equity efficiency sustainability flexibility conservation and consistency with other objectives of U S society Creating Consumers Carolyn M. Goldstein,2012 Home economics emerged at the turn of the twentieth century as a movement to train women to be more efficient household managers At the same moment American families began to consume many more goods and services than they produced To guide women in the **Labor's Millennium** Brett H. Smith,2010-01-01 Historians have traditionally interpreted the American land grant higher education movement as the result of political and economic forces Little attention has been given however to any explicit or implicit theological motivations for the movement This book tells the story of how the Christian belief of many founders of the University of Illinois motivated their educational theory and practice Constructing a social gospel of labor s millennium their shorthand for God s kingdom being enhanced through agricultural and mechanical education they initially proposed that the university would impart a millenarian blessing for the larger society by providing abundant food economic prosperity

vocational dignity and a charitable spirit of sacred unity and public service Rich in primary source research Smith's account builds a compelling case for at least one such institution's adaptation of an inherited evangelical educational tradition transitioning into a new era of higher learning that has left its mark on university life today
