present study was conducted in five Village Development Committees with 150 households of Udayapur district in Nepal. The present research aims to study the perception of farmers about climate change, the impact of climate change on agriculture and food security. It also documents the adaptation strategies that farmers practice. The study also attempts to study the agricultural policies through a gender perspective and identify the gaps in the policy. Both primary and secondary sources were used for data collection. The production of the major food crops like wheat, maize, rice, fruits, fresh vegetables and livestock has been in relative decline since the past several years. Sometimes total crop failure occurred due to drought, excessive rainfall or an epidemic of insects, pests and diseases. The change in the climatic pattern has resulted in decreased crop productivity that increases food insecurity of the people. Farmers use different adaptation measures to cope with the adverse effect of climate change. These helped to minimise crop losses and improve the food security situation of women farmers by preventing crop loss. The national agricultural policy was found lacking in gender sensitivity. Based on the analysis of the data, recommendations have been made to the government.

*Food Security and Land Use Change under Conditions of Climatic Variability* Victor R. Squires, Mahesh K. Gaur, 2020-05-12. This volume analyzes the global challenges of food security, land use changes and climate change impacts on food production in order to recommend sustainable development policies, anticipate future food services and demands and identify the economic benefits and trade offs of meeting food security demands and achieving climate change mitigation objectives. The key points of analysis that form the conclusions of this book are based on measuring the quantity and quality of land and water resources and the rate of use of sustainable management of these resources in the context of socio-economic factors including food security, poverty and climate change impacts. In six parts, readers will learn about these crucial dimensions of the effects of climate change on food security and will gain a better understanding of how to assess the trade offs when combating multiple climate change challenges and how to develop sustainable solutions to these problems. The book presents multidimensional perspectives from expert contributors offering holistic and strategic approaches to link knowledge on climate change and food security with action in the form of policy recommendations with a focus on sociological and socio-economic components of climate change impacts. The intended audience of the book includes students and researchers engaged in climate change and food security issues, NGOs and policy makers.

This assessment was conducted between 2013 and 2017 as the first of a series of monitoring and assessment reports under the guidance of the HIMAP Steering Committee. Eklavya Sharma (ICIMOD), Atiq Raman (Bangladesh), Yuba Raj Khatri (Nepal), Linxiu Zhang (China), Surendra Pratap Singh (India), Tandong Yao (China) and David Molden (ICIMOD and Chair of the HIMAP SC). This First HKH Assessment Report consists of 16 chapters which comprehensively assess the current state of knowledge of the HKH region, increase the understanding of various drivers of change and their impacts, address critical data gaps and develop a set of evidence-based and actionable policy solutions and recommendations. These are linked to nine mountain priorities for the mountains and people of the HKH, consistent with the Sustainable Development Goals. **Food Security in Small Island States** John Connell, Kristen Lowitt, 2019-06-25 This book provides a contemporary overview of the social, ecological and economic vulnerabilities that produce food and nutrition insecurity in various small island contexts, including both high islands and atolls from the Pacific to the Caribbean. It examines the historical and contemporary circumstances that have accompanied the shift from subsistence production to the consumption of imported processed foods and drinks and the impact of this transition on nutrition and the rise of non-communicable diseases. It also assesses the challenges involved in reversing this trend and how more effective social and economic policies, agricultural and fisheries strategies and governance arrangements could promote more resilient and sustainable small island food systems. It offers both theoretical and practical perspectives and brings together a broad range of policy areas, e.g. agriculture, food commerce, health, planning and socio-economic policy. Given its scope, the book offers a valuable resource for a range of disciplines in a number of regional contexts and for the growing number of scholars and practitioners working on and in small island states. It will be of particular value as the first book to examine the diversity and commonalities of island states around the globe as they confront issues of food security.
