Role of the Transcriptome in Breast Cancer Prevention Jose Russo,Irma H. Russo,2012-11-07 This book will provide the latest advances in molecular and cellular biology for establishing the foundation of a complete understanding of the mechanisms of breast differentiation leading to cancer prevention The authors are based on the epidemiological evidence indicating that early first full term pregnancy is a protective factor in human against breast cancer and they have used this paradigm and developed experimental systems in both in vivo and in vitro that have demonstrated mechanistically how the differentiation at the organ and cellular level takes place This knowledge has provided the blueprint for developing better understanding of the basis of cancer prevention The transcriptoma analysis of the breast of pre and post menopausal women has established a genomic signature imprinted in the breast that differs according to the reproductive history of the woman showing that early first full term pregnancy reprogram the organ This reprogramming takes place at the chromatin level by changing the transcriptional process The modification of the transcriptional control is due to the expression of non coding RNA sequences and posttranscriptional control driven by the spliceosome The plasticity of the genome of the human breast make possible this reprogramming that is not only induced by the physiological process of pregnancy but by the use of hormones that mimic pregnancy without pregnancy The author have established the basis of clinical trials for prevention and the discovery that short 15aa peptides of the chorionic gonadotropin hormone can be used in human breast cancer prevention based on preclinical and clinical data

Integration of Multisource Heterogenous Omics Information in Cancer Victor

Jin,Junbai Wang,Binhua Tang,2020-01-30 Multisource heterogenous omics data can provide unprecedented perspectives and insights into cancer studies but also pose great analytical problems for researchers due to the vast amount of data produced This Research Topic aims to provide a forum for sharing ideas tools and results among researchers from various computational cancer biology fields such as genetic epigenetic and genome wide studies *The Retina and Circadian Rhythms* Gianluca Tosini,P. Michael Iuvone,Douglas G. McMahon,Shaun P. Collin,2014-01-09 Daily rhythms are a ubiquitous feature of living systems Generally these rhythms are not just passive consequences of cyclic fluctuations in the environment but instead originate within the organism In mammals including humans the master pacemaker controlling 24 hour rhythms is localized in the suprachiasmatic nuclei of the hypothalamus SCN This circadian clock is responsible for the temporal organization of a wide variety of functions ranging from sleep and food intake to physiological measures such as body temperature heart rate and hormone release Moreover accumulating evidence suggests that dysfunction of the circadian rhythms due to genetic mutations or environmental factors i e jet lag or shift work contribute to the development of many pathologies including sleep disorders mood and affective disorders such as major depression bipolar disorder and schizophrenia as well as the risk of metabolic and cardiovascular disorders Genetic Response and Resistance in Plants towards Abiotic and Biotic Stresses, 2nd edition Sushil Satish Chhapekar,Sachin Gorakshnath Chavan,2024-12-20

Models and Estimation of Genetic Effects

José M Álvarez-Castro, Rong-Cai Yang, 2015-04-17 Ronald Fisher needed to develop elaborate models of genetic effects in

order to set the foundations of Quantitative Genetics in his 1918 paper The correlation between relatives on the supposition

of Mendelian inheritance Since then many significant implementations have been made to model genetic effects However at

the verge of one century after Fisher's kick off models of genetic effects keep on being discussed and implemented Indeed

the relatively recent advent of QTL analyses challenged the state of the art of this field by providing researchers the

opportunity to obtain and analyze estimates of genetic effects from real data In this context the development of this field was

not exempt of some polemics like the debate about the convenience of the functional and the statistical epistasis approaches

This research topic is meant to provide recent developments in models and estimation of genetic effects and to enrich the

discussion about how and why models of genetic effects must be further developed and applied The articles in this Research

Topic shall thus extend refine and or provide a refresh look at Fisher's original models of genetic effects and their application

to genetic effects estimation and to improve our understanding of evolutionary processes and breeding programs

MEDINFO 2019: Health and Wellbeing e-Networks for All L. Ohno-Machado, B. Séroussi, 2019-11-12 Combining and

integrating cross institutional data remains a challenge for both researchers and those involved in patient care Patient

generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life

conditions and also helping patients play a more active role in their own care This book presents the proceedings of

All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks interpreting health and biomedical data supporting care delivery enabling precision medicine and public health and the human element in medical informatics. The posters are divided into the same four groups. The book presents an overview of state of the art informatics projects from multiple regions of the world it will be of interest to anyone working in the field of medical informatics.
