Monahan, 1994-01-14 The compaction guide to greater profits less hassle Boost your bottom line with the expert efficient soil compaction techniques and technological solutions in this fully updated Second Edition This revision will provide the contractor fill inspector and geotechnical engineer with greater coverage of environmental topics including Septic system site investigation evaluation design and construction plus existing system renovation repair maintenance and management The latest uses of artificial fills from around the world foam plastics Elastizell Geocell Solite and waste materials like shredded tires and wood chips New material and helpful case studies on the correlation of Standard and Modified Proctor densities and a method for determining numerical values of bearing capacities for Proctor densities In addition to the current state of the art of fill technology basic insights into soil behavior are provided Innovative and patented methods of design are presented especially valuable for young practitioners and those responsible for their supervision and continuing education Reviewed as conversational humorous full of wisdom and practical this unusually readable resource is a profit maker no construction professional can afford to do without *Techniques of Archaeological Excavation* Philip Barker, 1993 Immediately hailed as the standard work and one of the most widely used archaeological field manuals Philip Barker's survey of current excavation techniques now in its third edition remains an indispensable guide for archaeologists **General Technical Report PSW.**, 1978 **Field Methods and Post-Excavation Techniques in Late Antique Archaeology**, 2016-04-26 Archaeologists working on late antique sites have not spent enough time thinking about methodology Their focus has been on recovering and cataloguing evidence or on the study of specific historical problems Digging has often been more important than publishing which has rarely extended beyond the basic summaries found in preliminary reports The re emergence of clearance excavation fuelled by the demands of tourism has further reduced the value of urban excavations in the East Mediterranean Here late antique levels have suffered in the hunt for photogenic early imperial architecture This volume attempts to address this situation by offering a critique of present practice and a series of exemplars alongside discussion articles on field technique and post excavation analysis The articles range from urban survey to the study of finds The book also considers if we need to develop specific field methods appropriate to the study of late antiquity Contributors are John Bintliff Jeremy Evans Axel Gering Stefan Groh Yoshiki Hori Nikolaos D Karydis Veli Kise Luke Lavan Zsolt Magyar Philip Mills John Pearce Steve Roskams Helga Sedlmayer Ellen Swift Itamar Taxel Douglas Underwood Lutgarde Vandeput and Joe Williams Malyan Excavation Reports, Volume I Ilene M. Excavation Chang-Yu Ou, 2014-04-21 With continued economic development and increasing urbanization excavations go deeper and become larger in scale and are sometimes even carried out in difficult soils These conditions require advanced analysis and design methods and construction technologies Most books on general foundation engineering introduce the basic analysis and design of excavation but do not delve into practical considerations This book examines both theory and practice from basic to advanced and discusses the major methods currently in practice around the world Each chapter also includes problems and their solutions to develop a practical real world understanding *The Civil Engineering Handbook* W.F. Chen, J.Y. Richard Liew, 2002-08-29 Providing extensive coverage of all major areas of civil engineering the second edition of this award winning handbook features contributions from leading professionals and academicians and is packed with formulae data tables and definitions vignettes on topics of recent interest and additional sources of information It includes a wealth of material in areas such as coastal engineering polymeric materials computer methods shear stresses in beams and pavement performance evaluation Its wide range of information makes it an essential resource for anyone working in civil structural or environmental engineering **Methods of Studying Root Systems** W. Böhm, 2012-12-06 Root research under natural field conditions is still a step child of science The reason for this is primarily methodological The known methods are tedious time consuming and the accuracy of their results is often not very great Many research workers have been discouraged by doing such root studies The need for more information on the development and distribution of plant roots in different soils under various ecological conditions is however obvious in many ecological disciplines Especially the applied botanical sciences such as agriculture horticulture and forestry are interested in obtaining more data on plant roots in the soil This book will give a survey of existing methods in ecological root research Primarily field methods are presented techniques for pot experiments are described only so far as they are important for solving ecological problems Laboratory methods for studying root physiology are not covered in this book Scientific publications on roots are scattered in many different journals published all over the world By working through the international root literature I found that about ten thousand papers on root ecology have been published at the present This is not very much compared with the immense literature on the aboveground parts of the plants but is however too much to cite in this book General Design Standards United States.
