about breaking records but also about understanding the fundamental constraints that govern motion in the universe Did you know that terminal velocity limits the speed of a skydiver or that the speed of light is considered the ultimate cosmic speed limit The book progresses from basic physics concepts like velocity and acceleration to real world examples like high speed vehicles and spacecraft and then delves into the science behind the speed of sound and light Speed Facts uniquely examines both achievements in speed and the limitations that physics imposes giving a grounded view of what is possible It highlights the interdisciplinary nature of speed connecting physics with engineering biology and even space travel and presents information in an accessible way for anyone curious about science
