## **Generative Touch:**

**Rhetorical Touch** Shannon Walters, 2014-10-20 Rhetorical Touch argues for an understanding of touch as a rhetorical art by approaching the sense of touch through the kinds of bodies and minds that rhetorical history and theory have tended to exclude. In resistance to a rhetorical tradition focused on shaping able bodies and neurotypical minds, Shannon Walters explores how people with various disabilities—psychological, cognitive, and physical—employ touch to establish themselves as communicators and to connect with disabled and nondisabled audiences. In doing so, she argues for a theory of rhetoric that understands and values touch as rhetorical. Essential to her argument is a redefinition of key concepts and terms: the rhetorical situation, rhetorical identification, and the appeals of ethos, character, pathos, emotion, and logos, logic, or message. By connecting Empedoclean and sophistic theories to Aristotelian rhetoric and Burkean approaches, Walters's methods mobilize a wide range of key figures in rhetorical history and theory in response to the context of disability. Using Empedocles' tactile approach to logos, Walters shows how the iterative writing processes of people with psychological disabilities shape crucial spaces for identification based on touch in online and real-life spaces. Mobilizing the touch-based properties of the rhetorical practice of *mētis*, Walters demonstrates how rhetors with autism approach the crafting of ethos in generative and embodied ways. Rereading the rhetorical practice of *kairos* in relation to the proximity between bodies, Walters demonstrates how writers with physical disabilities move beyond approaches of pathos based on pity and inspiration. The volume also includes a classroom-based exploration of the discourses and assumptions regarding bodies in relation to haptic or touch-based technologies. Because the sense of touch is the most persistent of the senses, Walters argues that in contexts of disability and in situations in which people with and without disabilities interact, touch can be a particularly vital instrument for creating meaning, connection, and partial identification. She contends that a rhetoric thus reshaped stretches contemporary rhetoric and composition studies to respond to the contributions of disabled rhetors and transforms the traditional rhetorical appeals and canons. Ultimately, Walters argues a rhetoric of touch allows for a richer understanding of the communication processes of a wide range of rhetors who use embodied strategies.

**Bodies of Knowledge** A. Abby Knoblauch, Marie E. Moeller, 2022-07-15 Bodies of Knowledge challenges homogenizing misunderstandings of knowledge construction and provides a complex discussion of what happens when we do not attend to embodied rhetorical theories and practices. Because language is always a reflection of culture, to attempt to erase language and knowledge practices that reflect minoritized and historically excluded cultural experiences obscures the legitimacy of such experiences both within and outside the academy. The pieces in Bodies of Knowledge draw explicit attention to the impact of the body on text, the impact of the body in text, the impact of the body as text, and the impact of the body upon textual production. The contributors investigate embodied rhetorics through the lenses of race and ethnicity, gender and sexuality, disability and pain, technologies and ecologies, clothing and performance, and scent, silence, and touch. In doing so, they challenge the false notion that academic knowledge

that is real knowledge is disembodied and therefore presumed white middle class cis het able bodied and male This collection lays bare how myriad bodies invent construct deliver and experience the processes of knowledge building Experts in the field of writing studies provide the necessary theoretical frameworks to better understand productive and unproductive uses of embodied rhetorics within the academy and in the larger social realm To help meet the theoretical and pedagogical needs of the discipline Bodies of Knowledge addresses embodied rhetorics and embodied writing more broadly though a rich varied and intersectional approach These authors address larger questions around embodiment while considering the various impacts of the body on theories and practices of rhetoric and composition Contributors Scot Barnett Margaret Booker Katherine Bridgman Sara DiCaglio Kristie S Fleckenstein Vyshali Manivannan Temptuous Mckoy Julie Myatt Julie Nelson Ruth Osorio Kate Pantelides Caleb Pendygraft Nadya Pittendrigh Kellie Sharp Hoskins Anthony Stagliano Megan Strom

Mamodiya, Udit, Kalam, Akhtar, Bossoufi, Badre, Awad, M. M., Somwanshi, Devendra Kumar, 2025-05-09 The convergence of artificial intelligence AI and haptics in the context of healthcare applications is useful for advancing the healthcare field Through cutting edge research AI can be used for sensing systems and feedback technologies Ultimately it can be applied to advance rehabilitation robotics and telesurgery As a result real world implementations of AI may revolutionize medical robots diagnostics and patient care Thus the convergence of AI and haptics is crucial for inspiring future collaboration and fostering global progress in healthcare technologies Integrating AI With Haptic Systems for Smarter Healthcare Solutions advances the knowledge base in the rapidly evolving fields of medical robotics and haptic technologies By addressing key challenges such as precision security and energy efficiency it drives innovation in healthcare improves patient outcomes and contributes to interdisciplinary advancements across AI robotics and medicine Covering topics such as augmented sensory perception neuro feedback and patient centric healthcare systems this book is an excellent resource for biomedical engineers healthcare technologists

clinicians surgeons policymakers professionals researchers scholars academicians and more      Perspective Taking: building a neurocognitive framework for integrating the “social” and the “spatial” Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08

Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint In the past social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far

Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines

Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics
