Education Autonomy And Critical Thinking:

Education, Autonomy and Critical Thinking Christopher Winch, 2006 The concepts of autonomy and of critical thinking are of key importance in many contemporary accounts of the aims of education Education Autonomy and Critical Thinking analyzes their relationship to each other and to education explores their roles in morality and politics and examines the part critical thinking has to play in fulfilling the educational aim of preparing young people for autonomy Assessing the significance of the concern with critical rationality as a key intellectual component for a worthwhile life involving autonomy this book also examines important views about what critical thinking is and how it can be cultivated Drawing from discussions on epistemology and the philosophy of language which concern the nature of rationality Christopher Winch produces a powerful critique of concepts central to contemporary philosophy of education autonomy and critical thinking

Education's Epistemology Harvey Siegel, 2017 Education's Epistemology extends and defends Siegel's reasons conception of critical thinking developing it in both philosophical and educational directions Of particular note is its emphasis on epistemic quality and epistemic rationality and its concerted defense of universal educational and philosophical ideals in the face of multicultural postmodern and other challenges *Education and Free Will* Johan Dahlbeck, 2018-10-09 Education and Free Will critically assesses and makes use of Spinoza's insights on human freedom to construe an account of education that is compatible with causal determinism without sacrificing the educational goal of increasing students autonomy and self determination Offering a thorough investigation into the philosophical position of causal determinism Dahlbeck discusses Spinoza's view of self determination and presents his own suggestions for an education for autonomy from a causal determinist point of view The book begins by outlining the free will problem in education before expanding on a philosophical understanding of autonomy and how it is seen as an educational ideal It considers Spinoza's determinism and discusses his denial of moral responsibility Later chapters consider the relationship between causal determinism and autonomy the educational implications of understanding free will and how free will can be utilised as a valuable fiction in education This book will be of great interest to academics and postgraduate students in the field of education especially those with an interest in moral education and philosophy of education It will also be of interest to those in the fields of philosophy and psychology and specifically those focusing on the free will problem on Spinoza studies and on the relation between moral psychology and external influence Leaders in Philosophy of Education, 2008-01-01 Since the 1960s we have witnessed the development of philosophy of education as a vital intellectual field Beginning with the work of Israel Scheffler at Harvard and spreading rapidly to the United Kingdom under the influence of R S Peters and Paul Hirst at the London Institute of Education analytical philosophers of education worked toward a new understanding of such central educational concepts as teaching learning explanation curriculum aims and objectives freedom and authority equality and liberal education They also examined theoretical issues in educational research and critiqued reigning ideas in educational psychology By the 1970s

interest in the analysis of educational concepts and research methods had waned. A new generation of philosophers of education turned to new issues including intellectual and practical virtues, individual well-being, the education of girls and women, the ethics of care, creative thinking and imagination, multicultural education, globalization and many others. In this book, 24 leading philosophers of education since 1970 who remain influential today present the fascinating stories of their lives and important new contributions to the field. They trace their early experiences, initial encounters with philosophy and philosophy of education, creative directions in their work, mature ideas and perceptions of future directions for the field. Each chapter contains a list of works chosen by the authors as their personal favorites.

Educational Change in International Early Childhood Contexts Linda R. Kroll, Daniel R. Meier, 2014-12-05. Co-published with the Association for Childhood Education International (ACEI). *Educational Change in International Early Childhood Contexts: Crossing Borders of Reflection* examines the role of teacher reflection in a variety of educational contexts worldwide. Using a case study approach that integrates research, theory, policy and practice, international contributors show how in some settings local traditions and values are honored while in others international educational ideas and programs become modified to suit local needs. Cases from Japan, China, Palestine, South Africa, Kenya, Finland, Italy and New Zealand are discussed as well as models from the United States. Through its thorough investigation into teacher reflection practices throughout the world, *Educational Change in International Early Childhood Contexts: Crossing Borders of Reflection* focuses on the transformative value of these practices to promote change in early childhood education. Framing commentary from Linda R. Kroll and Daniel R. Meier provides context and places the case studies in conversation with one another, allowing for productive international comparisons in this dynamic collection.

Philosophy and the Metaphysical Achievements of Education Ryan McInerney, 2021-06-17. Tracing the deep connections between philosophy and education, Ryan McInerney argues that we must use philosophy to reflect on the significance of educational practice to all human endeavour. He uses a broad approach which takes in the relationships governing philosophy, education and language to reveal education's fundamental achievements and metaphysical significance. The realization of educational ideals and policies are read alongside growing skepticism regarding the theoretical and practical significance of philosophical thinking and the emphasis on resource efficiency and measurable outcomes which characterise schooling today. It is from this context that McInerney defends the value inherent to the philosophy of education. Drawing upon contemporary continental and analytic thinkers including Nietzsche, Gadamer and Wittgenstein, McInerney charts the role of education in shaping the child's metaphysical transformation through language acquisition. Connecting early years and primary school education, McInerney pinpoints rationality as the crucial factor which produces critical thinking beings. He presents the pursuit of philosophically minded education as a rational pursuit which enables us to philosophise and educate others in turn, dispensing with the epistemological and conceptual foundationalisms of the past.
