Closs,Barbara Downes,Andrew Boulton,2009-04-01 Freshwater ecosystems are under increasing pressure as human
populations grow and the need for clean water intensifies The demand for ecologists and environmental managers who are
trained in basic freshwater ecology has never been greater Students and practitioners new to the field of freshwater ecology
and management need a text that provides them with an accessible introduction to the key questions while still providing
sufficient background on basic scientific methods Gerry Closs Barbara Downes and Andrew Boulton have written a text that
meets the requirements of these students Following an introduction to scientific methodology and its application to the study
of ecology several key concepts in freshwater ecology are reviewed using a wide range of scientific studies into fundamental
and applied ecological questions Key ecological questions that are explored in a freshwater context include the role of animal
dispersal and predators on freshwater community structure and the impact of pollutants and introduced species on
freshwater ecosystems This book represents the only freshwater ecology textbook that is specifically aimed at an
introductory level It will also be a useful primer for students who have not previously taken a specialized freshwater course
but who require an accessible overview of the subject General reviews on the methods of science influence of scale and the
main features of freshwater systems Coverage of several fundamental and applied ecological questions A logical structure in
each chapter that builds from a general observation of an ecological pattern to an exploration of the various scientific
approaches that can be used to investigate such patterns Suggested further reading lists for each chapter *Techniques of*
