Strube,K.F. Wender,1993-10-01 The present book is a result of a seven year 1986 1992 national research program in cognitive science in Germany presumably the first large scale cognitive science program there Anchored in psychology and therefore christened Wissenpsychologie psychology of knowledge it has found interdisciplinary resonance especially in artificial intelligence and education The research program brought together cognitive scientists from over twenty German universities and more than thirty single projects were funded The program was initiated by Heinz Mandl and Hans Spada the main goals of which were to investigate the acquisition of knowledge the access to knowledge and the modification and application of knowledge from a psychological perspective Emphasis was placed on formalisms of knowledge representation and on the processes involved In many of the projects this was combined with computer simulations A final but equally important goal was the development of experimental paradigms and methods for data analysis that are especially suited to investigate knowledge based processes The research program has had a major impact on cognitive psychology in Germany Research groups were established at many universities and research equipment was provided It also inspired a considerable number of young scientists to carry out cognitive research employ modeling techniques from artificial intelligence for psychological theorizing and construct intelligent tutoring systems for education Close contacts with cognitive scientists in

the U S have helped to firmly integrate the program with international research endeavours Each year one or two workshops were held The present volume is the result of the final workshop which was held in September 1992 Selected results from seventeen projects are presented in this book The volume is enriched by three guest scholars who agreed to participate in the final workshop and to comment on the chapters of the book *Uncommon Knowledge* Al McDowell, 2009 This book develops new science of gravity and light based on the century old Le Sage theory of an ether that was replaced by Einstein's Theory of Relativity After presenting astrophysical data contradicting the theory that the universe is expanding from a Big Bang experiments believed to prove Relativity are shown to actually prove the ether theory instead Freedom from the speed limit of light enables a science of subatomic particles traveling faster than light to produce gravity electric and magnetic fields light and radio waves Major technical innovations include solving the two fundamental problems with the Le Sage gravity theory and extending this theory to electromagnetism and consciousness This is a theory of everything that explains the heretofore unknown causes of the forces of nature This book builds on the works of Zecharia Sitchin and other authors to explain how life developed on Earth and that evolution requires direction from intelligence that dwells in the subatomic particles on which this theory of gravity and light is based Our biblical God is shown to be a composite of Sitchin's extraterrestrial gods who colonized Earth and the intelligence that dwells alongside our own mind in the particles from which the universe is constructed and powered General Knowledge 2020-Competitive Exam Book 2021 R.K.
