How the Mind Explains Behavior Bertram F. Malle, 2006-08-11 In this provocative monograph Bertram Malle describes behavior explanations as having a dual nature as being both cognitive and social acts and proposes a comprehensive theoretical model that integrates the two aspects When people try to understand puzzling human behavior they construct behavior explanations which are a fundamental tool of social cognition But Malle argues behavior explanations exist not only in the mind they are also overt verbal actions used for social purposes When people explain their own behavior or the behavior of others they are using the explanation to manage a social interaction by offering clarification trying to save face or casting blame Malle's account makes clear why these two aspects of behavior explanation exist and why they are closely linked along the way he illustrates the astonishingly sophisticated and subtle patterns of folk behavior explanations Malle begins by reviewing traditional attribution theories and their simplified portrayal of behavior explanation A more realistic portrayal he argues must be grounded in the nature function and origins of the folk theory of mind the conceptual framework underlying people's grasp of human behavior and its connection to the mind Malle then presents a theory of behavior explanations focusing first on their conceptual structure and then on their psychological construction He applies this folk conceptual theory to a number of questions including the communicative functions of behavior explanations and the differences in explanations given for self and others as well as for individuals and groups Finally he highlights the strengths of the folk conceptual theory of explanation over traditional attribution theory and points to future research applications

Mind, Brain and the Elusive Soul Mark Graves, 2016-04-22 Does science argue against the existence of the human soul Many scientists and scholars believe the whole is more than the sum of the parts This book uses information and systems theory to describe the more that does not reduce to the parts One sees this in the synapses or apparently empty gaps between the neurons in one's brain where informative relationships give rise to human mind culture and spirituality Drawing upon the disciplines of cognitive science computer science neuroscience general systems theory pragmatic philosophy and Christian theology Mark Graves reinterprets the traditional doctrine of the soul as form of the body to frame contemporary scientific study of the human soul

Cognitive Gadgets Cecilia Heyes, 2018-04-16 Adult humans have impressive pieces of cognitive equipment but in Cecilia Heyes's view these cognitive gadgets are not programmed in the genes They are constructed over the course of childhood through social interaction From birth our malleable minds learn from our culture soaked human environment not only what to think but how to think it

Polish Psychological Bulletin, 2005 *Theories in Social Psychology* Derek Chadee, 2022-03-01 THEORIES IN SOCIAL PSYCHOLOGY Theories in Social Psychology develops a deeper more robust understanding of the theoretical framework underlying the field Providing rich insights into the central theories and perspectives that continue to shape the discipline this edited volume brings together a panel of distinguished scholars to address thirteen social psychological theories relating to social cognition social comparison social reinforcement

and self In depth critical discussions examine topics including cognitive dissonance reactance attribution social comparison relative deprivation equity interdependency social identity and more The expanded second edition fills a substantial gap in current literature by articulating the important psychological theories rather than placing emphasis on applied research New and revised content helps students understand the construction and complexity of key theories while inspiring researchers of social behavior to reflect on their current work and consider future areas of investigation This comprehensive resource Identifies and discusses the theoretical perspectives and specific theories that form the foundation of the study of social psychology Features work from leading scholars including Bertram F Malle Paul R Nail Richard E Petty Thomas Mussweiler Faye J Crosby and Miles Hewstone Helps students move from introductory concepts to multifaceted theoretical frameworks Theories in Social Psychology Second Edition remains the perfect textbook for academics and students wanting to study and discuss important social psychological perspectives and theories and attain a deeper understanding of the theoretical framework This book will be a very valuable tool for students and professionals alike who wish to learn theories in social psychology and the role they have played in the development of the discipline It is comprehensive in its coverage and covers the theories in an objective and engaging way Robert J Sternberg Professor Department of Psychology College of Human Ecology Cornell University Honorary Professor of Psychology University of Heidelberg Germany In this wonderful new edition of compilation of theories at the core of modern social psychology presented to us by Derek Chadee we are given a special gift that enriches scholars teachers and students of psychology in social and general psychology We are treated to a clear exposition of these theories some of the research and controversy that each has generated and are given some guidelines to new paths for future exploration of their implications My research career has benefitted from working in the domains of dissonance attribution and social comparison theories but my teaching and textbook writing has relied on all of the theories and their concepts so elegantly orchestrated here Phillip G Zimbardo Ph D Professor Emeritus Stanford University

The Material Image Donald H. Wacome, 2020-09-29 In The Material Image Donald H Wacome sets out to reconcile the Christian faith and contemporary science by embracing rather than evading its naturalistic implications The sciences are our best way to know ourselves and the world we inhabit Wacome argues but this does not make belief in miracles unreasonable The sciences reveal that we are fully material beings the product of unguided natural selection God created human persons for the vocation of sharing in the everlasting Triune life and work but this creation does not involve design The mind is the embodied socially situated brain There is no immaterial soul we are the material image of our transcendent Creator This materialist conception does not preclude the resurrection of the body The freedom that matters for the human creature is compatible with our being governed by the laws of nature Morality and religion are natural merely human legacies of our evolutionary history which God employs in pursuit of fellowship with us Christians can faithfully and enthusiastically welcome the image of human beings given in contemporary science

The Timespace of Human Activity

Theodore R. Schatzki, 2010-04-12 This book shows that a concept of activity timespace drawn from the work of Martin Heidegger provides new insights into the nature of activity society and history Although the book is a work of theory it has significant implications for the determination and course not just of activity but of sociohistorical change as well Drawing on empirical examples the book argues 1 that timespace is a key component of the overall space and time of social life 2 that interwoven timespaces form an essential infrastructure of important social phenomena such as power coordinated actions social organizations and social systems and 3 that history encompasses constellations of indeterminate temporalspatial events The latter conception of history in turn yields a propitious account of how the past exists in the present In addition because the concept of activity timespace highlights the teleological character of human action the book contains an extensive defense of the teleological character of such allegedly ateleological forms of activity as emotional and ceremonial actions Since finally the book's ideas about timespace and activity as an indeterminate event derive from an interpretation of Heidegger the work furthers understanding of the relevance of his thought for social and historical theory The book combines textual interpretation theoretical argumentation and empirical substantiation Many of its empirical examples are taken from the Blue Grass Horse Country around Lexington Kentucky where the author resides Art, Imagination and Christian Hope Trevor A. Hart, Jeremy Begbie, Gavin Hopps, 2012 In Christian faith the present is continuously re shaped by ventures of hopeful and expectant living In art the poetic interplay between past present and future takes specific concrete forms furnishing vital resources for sustaining an imaginative ecology of hope This volume attends to the contributions that architecture drama literature music and painting can make as artists trace patterns of promise resisting the finality of modernity's despairing visions and generating hopeful living in a present which although marked by sin and death is grasped imaginatively as already pregnant with future **Beyond Pleasure and Pain** E. The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book

Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and son on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind Social Psychology, Second Edition Arie W.
