**Fundamentals of High-Performance Concrete** Nawy, 2000-11 High Performance Concrete Optimal Composition Design Leonid Dvorkin, Vadim Zhitkovsky, Oleh Bordiuzhenko, Yuri Ribakov, 2023-09-01 Concrete and reinforced concrete remain the main building materials for construction of modern fortifications The book presents experimental and theoretical results allowing production of special high strength rapid hardening concrete and fiber reinforced concrete It describes a method for effective proportioning of high strength fast setting concrete and fiber reinforced concrete with high dynamic strength as well as selecting proper technological parameters methodology for design of reinforced concrete structures using such concrete Particular attention is paid to ensuring the early strengthening of concrete within 24 hours after casting and to constructing structures with limited energy resources at the site

*Super-High-Strength High Performance Concrete* Pu Xincheng, 2012-09-20 When produced correctly concrete can be extremely strong with high load bearing capacity and superior durability Another noteworthy property is the relatively low amount of energy and resources consumed during production Super High Strength High Performance Concrete brings together the results of a major research project by the National Natural Science Foundation of China and the Doctoral Foundation of the Ministry of Education of China This ten year project explored the properties performance and potential of super high strength high performance SHSHP concrete With a view towards improved production that optimizes the strength and durability of concrete the book presents a host of topics on the cutting edge of concrete research These include A new method for the specific strength analysis of the pozzolanic effect of active mineral admixtures Analysis of the strength composition of SHSHP concrete Optimization of raw materials and mix proportion parameters for strength and flowability Analysis of the

mechanical properties deformation and durability of SHSHP concrete Methods for decreasing autogeneous shrinkage Testing methods for SHSHP concrete The book concludes with a consideration of the practical and economic benefits of these optimized concretes A systematic study of the different aspects of this essential commodity as well as the future direction of concrete science and technology this book is a valuable resource for material scientists and engineers engaged in developing better structures

Ultra-High Performance Concrete UHPC Ekkehard Fehling, Michael Schmidt, Joost Walraven, Torsten Leutbecher, Susanne Fröhlich, 2015-04-20 Selected chapters from the German concrete yearbook are now being published in the new English Beton Kalender Series for the benefit of an international audience Since it was founded in 1906 the Ernst Sohn Beton Kalender has been supporting developments in reinforced and prestressed concrete The aim was to publish a yearbook to reflect progress in ferro concrete structures until as the book's first editor Fritz von Emperger 1862 1942 expressed it the tempestuous development in this form of construction came to an end However the Beton Kalender quickly became the chosen work of reference for civil and structural engineers and apart from the years 1945 1950 has been published annually ever since Ultra high performance concrete UHPC is a milestone in concrete technology and application It permits the construction of both more slender and more durable concrete structures with a prolonged service life and thus improved sustainability This book is a comprehensive overview of UHPC from the principles behind its production and its mechanical properties to design and detailing aspects The focus is on the material behaviour of steel fibre reinforced UHPC Numerical modelling and detailing of the connections with reinforced concrete elements are featured as well Numerous examples worldwide bridges columns facades and roofs are the basis for additional explanations about the benefits of UHPC and how it helps to realise several architectural requirements The authors are extensively involved in the testing design construction and monitoring of UHPC structures What they provide here is therefore a unique synopsis of the state of the art with a view to practical applications

**Design of High-performance Pre-engineered Steel Concrete Composite**

**Beams for Sustainable Construction** Ming-Shan Zhao, Sing-Ping Chiew, Guan-Feng Chua, Miao Ding, Yi Yang, Zhengxia Cong, 2024-08-05 This accessible and practical shortform book details the properties and advantages of high performance pre engineered steel concrete composite beams HPCBs for improving the sustainability of construction techniques It also explains the analysis methods for testing HPCB systems The authors describe a new HPCB system that has been developed to reduce the input of raw materials and embodied CO2 commonly associated with heavily loaded and long spanned industrial buildings which predominately comprise reinforced concrete and improve the sustainability of the construction process They provide several resources throughout to facilitate adoption by professionals Design equations derived from Eurocode 4 approach for ultimate limit state and serviceability limit state and worked examples are included throughout The authors discuss the feasibility for both materials and the full scale beams and CO2 reduction methods including use of recycled concrete aggregate ground granulated blast furnace and silica fume to replace natural coarse aggregates and Ordinary

Portland Cement Guidance for testing HPCBs including setup test procedure and data collection and interpretation is also given. The authors also elaborate on recommendations for finite element analysis for HPCBs. Design examples are appended to illustrate typical current practice using a 12 x 12 m grid floor with live load of 15 kPa. Various considerations for different parameters such as fire resistance are discussed. Finally, the authors present a case study of a recently completed industrial building in Singapore to quantify the benefits of using HPCBs over reinforced concrete and conventional composite construction. Structural engineering professionals whose work relates to long span and heavy loading industrial or commercial buildings will benefit from the detailed guidance and focus on practical applications provided throughout this book. Post graduate students of advanced steel and composite structures will also benefit from these descriptions.

Designing and Building with UHPFRC Jacques Resplendino, François Toulemonde, 2013-01-29 This book contains the proceedings of the international workshop Designing and Building with Ultra High Performance Fibre Reinforced Concrete UHPFRC State of the Art and Development organized by AFGC the French Association for Civil Engineering and French branch of fib in Marseille France November 17-18 2009. This workshop was focused on the experience of a lot of recent UHPFRC realizations. Through more than 50 papers, this book details the experience of many countries in UHPFRC construction and design including projects from Japan, Germany, Australia, Austria, USA, Denmark, the Netherlands, Canada, and France. The projects are categorized as novel architectural solutions, new frontiers for bridges, new equipments, and structural components, and extending the service life of structures. The last part presents major research results, durability, and sustainability aspects, and the updated AFGC Recommendations on UHPFRC. **Innovative Computing and Information**
