Modern State Intervention in the Era of

Globalisation Nikolaos Karagiannis, Zagros Madjd-Sadjadi, 2007-06-26 Modern State Intervention in the Era of Globalisation is a thoughtful and well researched assessment of the evolving role of the state in the contemporary world economy This work is provocative because it goes against the predominant arguments in favor of a minimal state as commonly asserted by neoclassical economics Instead Karagiannis and Madjd Sadjadi think outside of the box and produce both theoretical arguments and evidence from important cases such as the EU Singapore and Hong Kong to support the idea of a viable and continuing role for the Developmental State The scholarship underlying this very readable book which includes contemporary material as well as ancient economic thought is truly impressive Readers will be left with much to reconsider about the benefits of globalisation Patrick James University of Southern California US

Profitability and the Great Recession Ascension Mejorado, Manuel Roman, 2013-10-23 From the mid 1980s investors in the US increasingly directed capital towards the financial sector at the expense of non financial sectors lured by the perception of higher profits This flow of capital inflated asset prices creating the stock market and housing bubbles which burst when the imbalance between stagnant incomes and rising debts triggered the banking meltdown Profitability and the Great Recession analyses these trends in profitability and capital accumulation which the authors identify as the root cause of the financial crisis in the context of the US and other major OECD countries Drawing on insights from Adam Smith David Ricardo John Stuart Mill and Karl Marx the authors interpret the relationship between capital accumulation and profitability trends through the conceptual lens of classical political economy The book provides extensive empirical evidence of declining rates of US non financial corporate accumulations from the mid 1960s and profitability trends in that sector falling from post war highs In contrast to this it is shown that there was a vigorous rise of profitability in the financial sector from a 1982 trough to the early part of the twenty first century which led to the bloating of that sector The authors conclude that the long term falling accumulation trend in the non financial corporate sector highlighted by the bankruptcy of major automobile corporations stands out as the underlying force that transformed the

financial crisis into a fully fledged Great Recession This book will be of interest to students and researchers in the areas of economics political economy business and finance Innovation in Business and Enterprise: Technologies and Frameworks
