Homotopy Methods In Topological Fixed:

Homotopy Methods in Topological Fixed and Periodic Points Theory Jerzy Jezierski, Waclaw Marzantowicz, 2006-01-17 The notion of a xed point plays a crucial role in numerous branches of mat matics and its applications Information about the existence of such points is often the crucial argument in solving a problem In particular topological methods of xed point theory have been an increasing focus of interest over the last century These topological methods of xed point theory are divided roughly speaking into two types The rst type includes such as the Banach Contraction Principle where the assumptions on the space can be very mild but a small change of the map can remove the xed point The second type on the other hand such as the Brouwer and Lefschetz Fixed Point Theorems give the existence of a xed point not only for a given map but also for any its deformations This book is an exposition of a part of the topological xed and periodic point theory of this second type based on the notions of Lefschetz and Nielsen numbers Since both notions are homotopy invariants the deformation is used as an essential method and the assertions of theorems typically state the existence of xed or periodic points for every map of the whole homotopy class we refer to them as homotopy methods of the topological xed and periodic point theory [Handbook of Topological Fixed Point Theory](#) Robert F. Brown, 2005-06-10 This book will be especially useful for post graduate students and researchers interested in the fixed point theory particularly in topological methods in nonlinear analysis differential equations and dynamical systems The content is also likely to stimulate the interest of mathematical economists population dynamics experts as well as theoretical physicists exploring the topological dynamics *Method of Guiding Functions in Problems of Nonlinear Analysis* Valeri Obukhovskii, Pietro Zecca, Nguyen Van Loi, Sergei Kornev, 2013-05-13 This book offers a self contained introduction to the theory of guiding functions methods which can be used to study the existence of periodic solutions and their bifurcations in ordinary differential equations differential inclusions and in control theory It starts with the basic concepts of nonlinear and multivalued analysis describes the classical aspects of the method of guiding functions and then presents recent findings only available in the research literature It describes essential applications in control theory the theory of bifurcations and physics making it a valuable resource not only for pure mathematicians but also for students and researchers working in applied mathematics the engineering sciences and physics **Topological Fixed Point Theory of Multivalued Mappings** Lech Górniewicz, 2006-06-03 This book is an attempt to give a systematic presentation of results and methods which concern the xed point theory of multivalued mappings and some of its applications In selecting the material we have restricted ourselves to studying topological methods in the xed point theory of multivalued mappings and applications mainly to differential inclusions Thus in Chapter III the approximation on the graph method in xed point theory of multivalued mappings is presented Chapter IV is devoted to the homological methods and contains more general results e.g. the Lefschetz Fixed Point Theorem the xed point index and the topological degree theory In Chapter V applications to some special problems in xed point theory are

formulated Then in the last chapter a direct applications to differential inclusions are presented Note that Chapters I and II have an auxiliary character and only results connected with the Banach Contraction Principle see Chapter II are strictly related to topological methods in the fixed point theory In the last section of our book see Section 75 we give a bibliographical guide and also signal some further results which are not contained in our monograph The author thanks several colleagues and my wife Maria who read and commented on the manuscript These include J Andres A Buraczewski G Gabor A Gorka M Goźniiewicz S Park and A Wieczorek The author wish to express his gratitude to P Konstanty for preparing the electronic version of this monograph

Dynamics and Numbers Sergii Kolyada; Martin Möller, Pieter Moree, Thomas Ward, 2016-07-27 This volume contains a collection of survey and research articles from the special program and international conference on Dynamics and Numbers held at the Max Planck Institute for Mathematics in Bonn Germany in 2014 The papers reflect the great diversity and depth of the interaction between number theory and dynamical systems and geometry in particular Topics covered in this volume include symbolic dynamics Bratelli diagrams geometry of laminations entropy Nielsen theory recurrence topology of the moduli space of interval maps and specification properties

Periodic Differential Equations in the Plane Rafael Ortega, 2019-05-06 Periodic differential equations appear in many contexts such as in the theory of nonlinear oscillators in celestial mechanics or in population dynamics with seasonal effects The most traditional approach to study these equations is based on the introduction of small parameters but the search of nonlocal results leads to the application of several topological tools Examples are fixed point theorems degree theory or bifurcation theory These well known methods are valid for equations of arbitrary dimension and they are mainly employed to prove the existence of periodic solutions Following the approach initiated by Massera this book presents some more delicate techniques whose validity is restricted to two dimensions These typically produce additional dynamical information such as the instability of periodic solutions the convergence of all solutions to periodic solutions or connections between the number of harmonic and subharmonic solutions The qualitative study of periodic planar equations leads naturally to a class of discrete dynamical systems generated by homeomorphisms or embeddings of the plane To study these maps Brouwer introduced the notion of a translation arc somehow mimicking the notion of an orbit in continuous dynamical systems The study of the properties of these translation arcs is full of intuition and often leads to non rigorous proofs In the book complete proofs following ideas developed by Brown are presented and the final conclusion is the Arc Translation Lemma a counterpart of the Poincaré Bendixson theorem for discrete dynamical systems Applications to differential equations and discussions on the topology of the plane are the two themes that alternate throughout the five chapters of the book

Fixed Point Theory for Decomposable Sets Andrzej Fryszkowski, 2006-02-21 Decomposable sets since T R Rockafellar in 1968 are one of basic notions in nonlinear analysis especially in the theory of multifunctions A subset K of measurable functions is called decomposable if Q for all and measurable A This book attempts to show the present stage of decomposable analysis from the point of view of fixed point

theory The book is split into three parts beginning with the background of functional analysis proceeding to the theory of multifunctions and lastly the decomposability property Mathematicians and students working in functional convex and nonlinear analysis differential inclusions and optimal control should find this book of interest A good background in fixed point theory is assumed as is a background in topology Topological Methods in Nonlinear Analysis, 2007 **Topological Fixed Point Theory and Applications** Boju Jiang, 2006-11-14 This selection of papers from the Beijing conference gives a cross section of the current trends in the field of fixed point theory as seen by topologists and analysts Apart from one survey article they are all original research articles on topics including equivariant theory extensions of Nielsen theory periodic orbits of discrete and continuous dynamical systems and new invariants and techniques in topological approaches to analytic problems Juliusz Schauder Center Winter School on Methods in Multivalued Analysis Lech Górniewicz, Wojciech Kryszewski, Sławomir Plaskacz, 2006 *Topological Fixed Point Principles for Boundary Value Problems* J. Andres, Lech Górniewicz, 2013-04-17 The book is devoted to the topological fixed point theory both for single valued and multivalued mappings in locally convex spaces including its application to boundary value problems for ordinary differential equations inclusions and to multivalued dynamical systems It is the first monograph dealing with the topological fixed point theory in non metric spaces Although the theoretical material was tendentiously selected with respect to applications the text is self contained Therefore three appendices concerning almost periodic and derivo periodic single valued multivalued functions and multivalued fractals are supplied to the main three chapters **Discrete and Continuous Dynamical Systems**, 2008 Triangulations and Simplicial Methods Chuangyin Dang, 2012-12-06 As a new type of technique simplicial methods have yielded extremely important contributions toward solutions of a system of nonlinear equations Theoretical investigations and numerical tests have shown that the performance of simplicial methods depends critically on the triangulations underlying them This monograph describes some recent developments in triangulations and simplicial methods It includes the D1 triangulation and its applications to simplicial methods As a result efficiency of simplicial methods has been improved significantly Thus more effective simplicial methods have been developed **Metrical Almost Periodicity and Applications to Integro-Differential Equations** Marko Kostić, 2023-06-06 The theory of almost periodic functions is a very active field of research for scholars This research monograph analyzes various classes of multi dimensional metrically almost periodic type functions with values in complex Banach spaces We provide many applications of our theoretical results to the abstract Volterra integro differential inclusions in Banach spaces *Encyclopedia of Optimization* Christodoulos A. Floudas, Panos M.
