## **Human Cytokines:**

**Cytokines in Human Reproduction** Joseph A. Hill, 1999-12-24 The role of cytokines in the pathogenesis of disease is an area of research offering exciting challenges for scientists developing new disease interventions Cytokines are proteins secreted by immune and inflammatory cells that circulate in the blood or extracellular space and bind to specific receptors activating a cascade of intracellular signals which ultimately affect the growth differentiation and viability of cells The effect of too little or too much of an individual cytokine or cytokines as a potential source of disease has led to novel treatment strategies designed to control the processes affecting cytokine levels Cytokines in Human Reproduction is the first reference to examine the role and effect of cytokines in reproduction specifically how they cause and prevent disease Edited by one of the foremost authorities in reproductive immunology this important work includes the latest in cytokine research from leading specialists In its thirteen chapters the book includes discussion of cytokines in both testicular and ovarian function cytokines in early pregnancy cytokines in disease development uterine leiomyomas and tumors as well as The role of psycho neuro endocrine immunology in reproduction Cytokine networks in the human placenta Cytokines in the human fallopian tube Cytokines in the peritoneal environment Cytokines in endometriosis Oncogenes and growth factors in gynecologic oncology Authoritative and up to date Cytokines in Human Reproduction offers the first comprehensive look at cytokines in reproductive science and is a valuable resource in the library of the maternal fetal specialist reproductive immunologist obstetrician gynecologist as well as researcher or student Cytokines and Cytokine Receptors Constantin A.

Bona, Jean-Pierre Revillard, 2003-09-02 The field of cytokine research is expanding at a rapid pace Contributions from the major leading groups in the world on the structure and biological properties of cytokine and cytokine receptors as well as integrated reviews on cytokines in various physiological and pathological conditions were presented in three issues of International Reviews of Immunology This collection of articles provided a unique source of information However important discoveries are emerging very rapidly and some of the reviews written in 1997 are already outdated In this book the editors assemble reviews that have been updated by their authors to include all the recent publications and unpublished data from the authors laboratories This volume should serve as an excellent reference source for all those concerned by the multiple faces of cytokines in basic research and in the clinic **Handbook of Human Immunology** Maurice R.G. O'Gorman, Albert D. Donnenberg, 2008-02-15 Since the publication of the first edition of the Handbook of Human Immunology in 1997 major scientific achievements have directly contributed to an increased understanding of the complexities of the human immune system in health and disease Whether as a result of the sequencing of the entire human genome or of technological advancements several

**Molecular Farming of Plants and Animals for Human and Veterinary Medicine** L. Erickson, W.-J. Yu, J. Brandle, R. Rymerson, 2013-04-18 Molecular farming has been hailed as the third wave of genetically modified organisms produced through biotechnology for the bio based economy of the future Unlike products of the first

wave such as herbicide resistant crop plants which were perceived to benefit only the farmers who used them and the agrochemical companies who developed them products of molecular farming are designed specifically for the benefit of the consumer Such products could be purified from food or non food organisms for a range of applications in industry as well as animal and human health Alternatively the products of this technology could be consumed more directly in some edible format such as milk eggs fruits or vegetables There is a rapidly growing interest On the part of the public as well as in the medical community in the role food plays in health especially in the immunophysiological impact of food over and above the role of basic nutrition
