Civilisation The Undeniable Truth is an in depth look at what we are who we are and the ultimate purpose of our existence The cosmos is a grand miracle and though we dont know its origin or purpose one thing does remain true and that is that the entire cosmos is made up of energy the energy of creation The Earth is a living biosphere that is a product of the atomic expansion of the universe The Earths containment system allows for the sustainability of life During the early stages of civilization life was reckless barbaric and uncontained It would take thousands of years for the primitive energy to evolve into a sophisticated civilized energy One of the key factors for a shift in human behavior was through the conception of ego energy The ego would be responsible for the governing power of civilization known as The Mass of Collective Energy Civilisation explores illusionary perceptions projections and reflections of the ego Civilisation is a presentation of conscious awareness

**Energy Systems in the Era of Energy Vectors** Fabio Orecchini, Vincenzo Naso, 2011-10-17 What lies beyond the era of fossil fuels While most answers focus on different primary energy resources Energy Systems in the Era of Energy Vectors provides a completely new approach Instead of providing a traditional consumption analysis of classical primary energy resources such as oil coal nuclear power and gas Energy Systems in the Era of Energy Vectors describes and assesses energy technologies markets and future strategies focusing on their capacity to produce exchange and use energy vectors Special attention is given to the renewable energy resources available in different areas of the world and made exploitable by the integration of energy vectors in the global energy system Clear definitions of energy vectors and energy systems are used as the basis for a complete explanation and assessment of up to date available technologies for energy resources transport and storage systems conversion and use The energy vectors scheme allows the potential realization of a worldwide sustainable energy system to fulfill global development expectations by minimizing both the impact on the environment and the international political frictions for access to limited and concentrated resources Energy Systems in the Era of Energy Vectors is an informative read for researchers and advanced students in industrial energy and environmental engineering It also contains valuable information for managers and technicians working in the energy sector
