Human Evolution Paul F. Kisak, 2016-04-17 Human evolution is the evolutionary process that led to the emergence of anatomically modern humans The topic typically focuses on the evolutionary history of the primates in particular the genus Homo and the emergence of Homo sapiens as a distinct species of the hominids or great apes rather than studying the earlier history that led to the primates The study of human evolution involves many scientific disciplines including physical anthropology primatology archaeology paleontology neurobiology ethology linguistics evolutionary psychology embryology and genetics Genetic studies show that primates diverged from other mammals about 85 million years ago in the Late Cretaceous period and the earliest fossils appear in the Paleocene around 55 million years ago Within the Hominoidea apes superfamily the Hominidae family diverged from the Hylobatidae gibbon family some 15-20 million years ago African great apes subfamily Homininae diverged from orangutans Ponginae about 14 million years ago the Hominini tribe humans Australopithecines and other extinct biped genera and chimpanzees parted from the Gorillini tribe gorillas about 8 million years ago and in turn the subtribes Hominina humans and biped ancestors and Panina chimps separated about 7.5 million years ago The basic adaptation of the hominin line is bipedalism The earliest bipedal hominin is considered to be either Sahelanthropus or Orrorin alternatively either Sahelanthropus or Orrorin may instead be the last shared ancestor between

chimps and humans Ardipithecus a full biped arose somewhat later and the early bipeds eventually evolved into the australopithecines and later into the genus Homo The earliest documented representative of the genus Homo is Homo habilis which evolved around 2.8 million years ago and is arguably the earliest species for which there is positive evidence of the use of stone tools The brains of these early hominins were about the same size as that of a chimpanzee although it has been suggested that this was the time in which the human SRGAP2 gene doubled producing a more rapid wiring of the frontal cortex During the next million years a process of rapid encephalization occurred and with the arrival of Homo erectus and Homo ergaster in the fossil record cranial capacity had doubled to 850 cm³ Such an increase in human brain size is equivalent to each generation having 125 000 more neurons than their parents It is believed that Homo erectus and Homo ergaster were the first to use fire and complex tools and were the first of the hominin line to leave Africa spreading throughout Africa Asia and Europe between 1.3 to 1.8 million years ago According to the recent African origin of modern humans theory modern humans evolved in Africa possibly from Homo heidelbergensis Homo rhodesiensis or Homo antecessor and migrated out of the continent some 50 000 to 100 000 years ago gradually replacing local populations of Homo erectus Denisova hominins Homo floresiensis and Homo neanderthalensis Archaic Homo sapiens the forerunner of anatomically modern humans evolved in the Middle Paleolithic between 400 000 and 250 000 years ago This book discusses the latest comprehensive information about human evolution and is designed to be a reference and provide an overview of the topic and give the reader a structured knowledge to familiarize yourself with the topic at the most affordable price possible The accuracy and knowledge is of an international viewpoint as the edited articles represent the inputs of many knowledgeable individuals and some of the most current knowledge on the topic based on the date of publication

Human Evolution and Prehistory Haviland, 1996-10 Human Evolution and Prehistory William A. Haviland, 2013 Creativity in Human Evolution and Prehistory Steven Mithen, 2005-08-10 The book examines how our understanding of human creativity can be extended by exploring this phenomenon during human evolution and prehistory Encyclopedia of Human Evolution and Prehistory Ian Tattersall, Eric Delson, John A. Van Couvering, 1988 **Society in Prehistory** Tim Megarry, 1995-10-01

Since the 1960s spectacular advances have been made in the study of prehistory It is now possible to reconstruct the behavior and social life of pre human ancestors as much as two million years ago These findings have forced us to revise dramatically our view of human evolution the study of which is only complete through an integrated perspective that emphasizes biological and social factors Archaeology primate studies genetics palaeontology hunter gatherer studies and anthropology have all contributed to significant breakthroughs in our understanding of human origins necessitating an approach to prehistory that is not tied to a particularly disciplinary approach Stressing the importance of culture as a formative agent in the evolutionary emergence of modern humans Society in Prehistory provides an impressive interdisciplinary and deeply informed survey of prehistory Individual chapters focus on culture and evolution biology and

culture primate societies the first hominids tools and culture the economics of foraging modern humans and human behavior sex and the division of labor and sexuality and social life The book reveals that while social behavior is biologically grounded it is not biologically determined **Human Evolution and Prehistory - eBook** Robert Wall, 1753 **Biocultural Evolution** Clare L. Boulanger, 2012-04-23 In a writing style that will captivate those new to the subject Boulanger presents an understanding of human biological and cultural evolution that is both scientific and humanistic in keeping with classic anthropological ideals The aim of this reasonably priced text is to help students think critically about what being human has been what it is at present and what it may be in the future While the book focuses on the anthropological subfields of biological anthropology and archaeology information and insights are also drawn from cultural anthropology and anthropological linguistics Bouldangers absorbing treatment in contrast to other texts on human evolution features an opening chapter that seeks to negotiate fairly without defensiveness or condescension a pathway for creationists to follow into the topic The next three chapters provide background on the history of evolutionary science the biology of inheritance and population change and primatology Chapters 5 through 9 focus on human biocultural evolution from the time of the ancestor we share with chimpanzees through the development of agriculture and the founding of states The last chapter deals with the issue of race how it has affected our interpretation of the past and how it continues to influence the present In addition to an extensive glossary the fully illustrated textbook features numerous topic enhancing sidebars questions for discussion and review and student exercises **Human Evolution and Prehistory** KENDALL HUNT PUB CO, 2011-08-30 **A Pocket History of Human Evolution: How We Became Sapiens** Silvana Condemi, François Savatier, 2019-11-01 Why aren't we more like other apes How did we win the evolutionary race Find out how wise Homo sapiens really are Prehistory has never been more exciting New discoveries are overturning long held theories left and right Stone tools in Australia date back 65 000 years a time when we once thought the first Sapiens had barely left Africa DNA sequencing has unearthed a new hominid group the Denisovans and confirmed that crossbreeding with them and Neanderthals made Homo sapiens who we are today A Pocket History of Human Evolution brings us up to date on the exploits of all our ancient relatives Paleoanthropologist Silvana Condemi and science journalist François Savatier consider what accelerated our evolution Was it tools our large brains language empathy or something else entirely And why are we the sole survivors among many early bipedal humans Their conclusions reveal the various ways ancient humans live on today from gossip as modern grooming to our gendered division of labor and what the future might hold for our strange and unique species Human Prehistory Deborah Barsky, 2022-08-18 This book provides a concise overview of human prehistory It shows how an understanding of the distant past offers new perspectives on present day challenges facing our species and how we can build a sustainable future for all life on planet Earth Deborah Barsky tells a fascinating story of the long term evolution of human culture and provides up to date examples from the archaeological record to illustrate the different phases of human history Barsky also

presents a refreshing and original analysis about issues plaguing modern globalized society such as racism institutionalized religion the digital revolution human migrations terrorism and war Written in an accessible and engaging style Human Prehistory is aimed at an introductory level audience Students will acquire a comprehensive understanding of the interdisciplinary scientific study of human prehistory as well as the theoretical interpretations of human evolutionary processes that are used in contemporary archaeological practice Definitions tables and illustrations accompany the text
