Jeffrey Meldrum, Charles E. Hilton, 2011-06-27 The inspiration for this volume of contributed papers stemmed from conversations between the editors in front of Chuck Hilton's poster on the determinants of hominid walking speed presented at the 1998 meetings of the American Association of Physical Anthropologists AAPA Earlier at those meetings Jeff Meldrum with Roshna Wunderlich had presented an alternate interpretation of the Laetoli footprints based on evidence of midfoot flexibility As the discussion ensued we found convergence on a number of ideas about the nature of the evolution of modern human walking From the continuation of that dialogue grew the proposal for a symposium which we called From Biped to Strider the Emergence of Modern Human Walking The symposium was held as a session of the 69th annual meeting of the AAPA held in San Antonio Texas in 2000 It seemed to us that the study of human bipedalism had become overshadowed by the often polarized debates over whether australo pithecinines were wholly terrestrial in habit or retained a significant degree of arboreality      The Origin & Evolution of Man Ashley Montagu, 1973      Resources for the Teaching of Anthropology David G. Mandelbaum, Gabriel W. Lasker, Ethel M. Albert, 2023-11-15      *A Topical Guide to the American Journal of Physical Anthropology, Volumes 22-53 (1964-1980)* M. Yaşar Işcan, 1983      **Man As the Prayer** Yup Lee, 2000 In this book a totally new picture of five million years of human evolutionary history is presented Male and female hominids lived separately in different areas for most of the last five million years They met together once a year and stayed together for a brief period What they did for and during this annual mating

season is the key to the proper and correct understanding of human evolution Five million years ago the last common ancestors of the African great apes and humans lived in an extensive rain forest encompassing a river and a lake There was a system of mountains a lake and a river all of which were linked together Ever since then mountains rivers and lakes were intimately involved with humankind When the climate turned arid the riverside forest broke into fragments of small forests In desperate need of food the last common ancestors were forced to visit the trees which dotted the river shore They developed a unique mode of terrestrial locomotion to move between the main forest and the scattered patches of forest One day during drought a small group of apes ventured to a faraway tract of forest beside the river On the road they were caught in heavy rain and in the resulting frenzy they lost their way back home During their wanderings they evolved into gorillas Almost at the same time another small group of apes met the same fate and evolved into chimpanzees As the climate grew increasingly arid the year divided itself into dry and wet seasons During the dry season males were forced to remain in the nearby mountain ranges because there weren't enough food in the home forest to support both males and females As a result males and females parted ways during the annual dry season These were the ancestral hominids who evolved into australopithecines Two and a half million years ago as the climate became increasingly arid the forest surrounding the lake began to break up and disappear Finally the female hominids the inhabitants of the forest at the margin of the lake were forced down to the ground They became fully terrestrial but they did not know where to find food and water Consequently females began to follow herds of Hipparion horses Later they switched to one-toed horses Following these migrating horses some hominids ended up in East Asia from Africa about 2 million years ago In the same fashion some hominids later wound up in Europe In the meantime male hominids developed and acquired unique behavior As rain began to fall they went downstream to their courting ground There they beat the ground with sticks to attract and seduce mates They beat pebbles sand the bones of dead animals or anything else on the ground leaving behind piles of fractured dented and broken bones These stone debris are erroneously called Oldowan tools by archaeologists and anthropologists Rain was so important to our remote ancestors because the rain was a harbinger of the brief annual mating season They prayed for the coming of rain as the climate became arid They prayed earnestly by beating the ground with sticks in their place of courtship In due course hominids became prayers Later as rain began to fall irregularly the rain lost its foremost importance Instead the horse ascended in importance Now males prayed for the coming of the horse accompanied by their mates About 32 000 years ago Upper Palaeolithic Europeans began to pray for the coming of the horse by carving engraving and painting horses on the cave walls Painting was simply another version of prayer The same was true for language Human language was developed out of verbal prayer In this book the common thread running through the entire history of human evolution is crisply and clearly explicated The origins of construction music sculpture handicrafts painting and languages are all clarified as variations of the same theme That theme was prayer

Human Evolution John L. Bradshaw, 2014-01-02 The last decade has

seen an explosive burst of new information about human origins and our evolutionary status with respect to other species. We have long been considered unique as upright bipedal creatures endowed with language, the ability to use tools, to think and introspect. We now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories. Our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology, primatology, ethology, archaeology, palaeontology, comparative linguistics and molecular biology. It is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions: our origin and place in the animal kingdom, whether unique or otherwise, which makes the general topic so fascinating to layperson, student and expert alike. The book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with particular reference to language, praxis and aesthetics. A chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates, hominids and the advent of bipedalism. There follows a more detailed account of the various species of *Homo*, the morphology and origin of modern *H. sapiens sapiens* as seen from the archaeological, palaeontological and molecular biological perspectives. The origins of art and an aesthetic sense in the Acheulian and Mousterian through to the Upper Palaeolithic are seen in the context of the psychology of art. Two chapters on language address its nature and realization centrally and peripherally; the prehistory and neuropsychology of speech and evidence for speech and/or language in our hominid ancestors. A chapter on tool use and praxis examines such behaviour in other species, primate and non primate; the neurology of praxis and its possible relation to language. Encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence, social intelligence, consciousness and self awareness. A final chapter reviews the issues covered. The book of around 70 000 words of text includes over 500 references, over half of which date from 1994 or later. Human Evolution Joseph Benjamin

Birdsell, 1972. **Physical (Biological) Anthropology** P. Rudan, 2009-07-29. Physical Biological Anthropology theme is a component of Encyclopedia Of Biological, Physiological And Health Sciences EOLSS which is an integrated compendium of twenty one Encyclopedias. Biological anthropology also known as physical anthropology is a scientific discipline concerned with the biological and behavioral aspects of human beings, their related non human primates and their extinct hominin ancestors. It is a subfield of anthropology that provides a biological perspective to the systematic study of human beings. This volume is aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers, NGOs and GOs. *Understanding Human Evolution* Jeffrey K. McKee, Frank E. Poirier, W Scott McGraw, 2015-10-16. For the one term course in human evolution, paleoanthropology or fossil hominins taught at the junior/senior level in departments of anthropology or biology. This new edition provides a comprehensive overview to the field of paleoanthropology, the study of human evolution by analyzing fossil

remains It includes the latest fossil finds attempts to place humans into the context of geological and biological change on the planet and presents current controversies in an even handed manner
