Although this interdependence is a reality of our existence we are just beginning to understand that we have evolved as social creatures with interwoven brains and biologies The human brain itself is a social organ and to truly understand being human we must understand not only how we as whole people exist with others but how our brains themselves exist in relationship to other brains The first edition of this book tackled these important questions of interpersonal neurobiology that the brain is a social organ built through experience using poignant case examples from the author's years of clinical experience Brain drawings and elegant explanations of social neuroscience wove together emerging findings from the research literature to bring neuroscience to the stories of our lives Since the publication of the first edition in 2006 the field of social neuroscience has grown at a mind numbing pace Technical advances now provide more windows into our inner neural universe and terms like attachment empathy compassion and mindfulness have begun to appear in the scientific literature Overall there has been a deepening appreciation for the essential interdependence of brain and mind More and more parents teachers and therapists are asking how brains develop grow connect learn and heal The new edition of this book organizes this cutting edge abundant research and presents its compelling insights reflecting a host of significant developments in social neuroscience Our understanding of mirror neurons and their significance to human relationships has continued to expand and deepen and is discussed here Additionally this edition reflects the gradual shift in focus from individual brain structures to functional neural systems an important and necessary step forward A great deal of neural overlap has been discovered in brain activation when we are thinking about others and ourselves This raises many questions including how we come to know others and whether the notion of an individual self is anything more than an evolutionary strategy to support our interconnection In short we are just beginning to see the larger implications of all neurological processes how the architecture of the brain can help us to better understand individuals and our relationships This book gives readers a deeper appreciation of how and why relationships have the power to reshape our brains throughout our life

In *Relationship Economics* Lindon Robison and Bryan Ritchie argue that what needs to be understood is not just whether relationships matter, which of course they do, but also how much and in what circumstances they should matter. Providing a rigorous and measurable definition of the way that relationships among individuals create a capital, social capital, that can be saved, spent, and used like other forms of capital, Robison and Ritchie use numerous examples and insightful analysis to explain how social capital shapes our ability to reduce poverty, understand corruption, encourage democracy, facilitate income equality, and respond to globalization. The first part of the book explains how social capital can be manipulated, stored, expended, and invested. The second part explores how levels of social capital within relationships influence economic transactions, both positively and negatively, which in turn shape poverty levels, economic efficiency levels, and types of political participation and institutional structures.
