### Human reproduction

Humans reproduce by sexual reproduction involving male and female reproductive cells called gametes. The reproductive system includes organs called gonads that produce gametes and hormones; ducts for transport, storage and composition of gametes; accessory organs and glands for fluid secretion; and internal genitalia. Reproduction is regulated by hormones produced by the gonads, the hypothalamus and the pituitary gland. Fertilisation involves the introduction of sperm into the vagina. The sperm travels through the female reproductive tract until it encounters an ovulated, a female secondary gamete. Fertilisation can then take place.

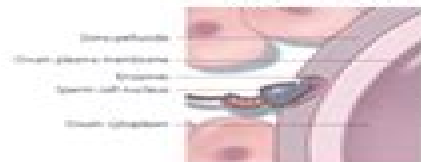

### Male reproductive system

The adult male reproductive system is a collection of two primary external structures, the testes and the penis. The testes are divided into thousands of tiny compartments or lobules containing seminiferous tubules, tightly coiled structures where sperm formation takes place.

The testes are situated in a sac called the scrotum, which provides support and regulates the position of the testes relative to the body. The scrotum moves because of the testes' need to change its external temperature to maintain the proper temperature within the testes for sperm formation.

Seminiferous tubules produce sperm cells, which are transported to the epididymis, where they are stored until they are ready for use. The epididymis and vas deferens of the testis regulate the development of male secondary sex characteristics.

### Acrosomal reaction

### Fusion of plasma membranes

### Fertilization

The upper portion of the vagina leads to the vaginal canal for fertilisation. Millions of sperm travel through the female reproductive tract, utilizing cilia, until they reach the egg. Within a sperm, the nucleus contains the genetic material. The sperm travels through the female reproductive tract, utilizing cilia, until they reach the egg. ### Female reproductive system

The internal structures of the adult female reproductive system include the vagina, uterus, ovaries and fallopian tubes. These structures form a pathway allowing the release of an egg cell, fertilisation, its growth and delivery of a developed fetus. The vagina is a muscular canal that leads from the uterus to the outside of the body. It is the lower part of the uterus. It channels through the cervix allows the passage of sperm and menstrual discharge. The uterus is a hollow pear-shaped organ with muscular walls that contract during childbirth. The lower lining of the uterus is the endometrium, which thickens during each menstrual cycle in preparation for implantation by a fertilised egg. This lining is shed during menstruation if fertilisation does not occur.

### Spermatogenesis

The ovaries, located on each side of the uterus, are responsible for producing ova as well as the female sex hormones estrogen and progesterone. Estrogen is responsible for the development of the female reproductive structures, menstrual characteristics, and breast development. Progesterone prepares the uterus lining for implantation of a fertilised egg and is necessary for breast milk production. The ovaries are connected to the uterus by the ovarian tubes, narrow ducts that provide a passageway for the egg to reach the uterus.

### Ovulation phases

### Ovulation & the menstrual cycle

The menstrual cycle refers to the sequence of events that occurs in the endometrium, the cell lining lining the uterus. The cycle normally lasts approximately 28 days. The purpose is to prepare the uterus for possible pregnancy. The menstrual cycle is governed by the endocrine system. If fertilisation does not occur, declining estrogen and progesterone levels initiate menstruation and the cycle begins again.

### Sex chromosomes

### Sex determination

Each parent contributes one sex chromosome. The mother always contributes an X sex chromosome, while the father contributes either an X or a Y sex chromosome. An XX combination produces a girl, while a XY sex is an XY combination.

Ellison, 2017-09-04 The study of human reproductive ecology represents an important new development in human evolutionary biology Its focus is on the physiology of human reproduction and evidence of adaptation and hence the action of natural selection in that domain But at the same time the study of human reproductive ecology provides an important perspective on the historical process of human evolution a lens through which we may view the forces that have shaped us as a species In the end all actions of natural selection can be reduced to variation in the reproductive success of individuals Peter Ellison is one of the pioneers in the fast growing area of

reproductive ecology He has collected for this volume the research of thirty one of the most active and influential scientists in the field Thanks to recent noninvasive techniques these contributors can present direct empirical data on the effect of a broad array of ecological behavioral and constitutional variables on the reproductive processes of humans as well as wild primates Because biological evolution is cumulative however organisms in the present must be viewed as products of the selective forces of past environments The study of adaptation thus often involves inferences about formative ecological relationships that may no longer exist or not in the same form Making such inferences depends on carefully weighing a broad range of evidence drawn from studies of contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism s contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with Current Catalog National Library of Medicine (U.S.),1979 Includes subject section name section and 1968 1970 technical reports

The book delves into Human Reproductive Physiology. Human Reproductive Physiology is a crucial topic that must be grasped by everyone, from students and scholars to the general public. The book will furnish comprehensive and in-depth insights into Human Reproductive Physiology, encompassing both the fundamentals and more intricate discussions.

1. This book is structured into several chapters, namely:
  - Chapter 1: Introduction to Human Reproductive Physiology
  - Chapter 2: Essential Elements of Human Reproductive Physiology
  - Chapter 3: Human Reproductive Physiology in Everyday Life
  - Chapter 4: Human Reproductive Physiology in Specific Contexts
  - Chapter 5: Conclusion
2. In chapter 1, the author will provide an overview of Human Reproductive Physiology. The first chapter will explore what Human Reproductive Physiology is, why Human Reproductive Physiology is vital, and how to effectively learn about Human Reproductive Physiology.
3. In chapter 2, this book will delve into the foundational concepts of Human Reproductive Physiology. The second chapter will elucidate the essential principles that must be understood to grasp Human Reproductive Physiology in its entirety.
4. In chapter 3, this book will examine the practical applications of Human Reproductive Physiology in daily life. This chapter will showcase real-world examples of how Human Reproductive Physiology can be effectively utilized in everyday scenarios.
5. In chapter 4, the author will scrutinize the relevance of Human Reproductive Physiology in specific contexts. This chapter will explore how Human Reproductive Physiology is applied in specialized fields, such as education, business, and technology.
6. In chapter 5, this book will draw a conclusion about Human Reproductive Physiology. This chapter will summarize the key points that have been discussed throughout the book.

This book is crafted in an easy-to-understand language and is complemented by engaging illustrations. It is highly recommended for anyone seeking to gain a comprehensive understanding of Human Reproductive Physiology.
