## **Human Development Tb:**

Context and Development Robert Cohen, Alexander W. Siegel, 2014-02-04 The purpose of this book is to explore meaningful integrations of developmental processes and functioning with conceptualizations of context a term traditionally denoting physical settings social arenas or perceptual or social backdrops in relation to a focal point However the study of context has taken a considerably more unique and vibrant form in recent years the term is becoming more than a substitute for background independent variables Rather the contributions of context to behavior thought feelings and vice versa are becoming central issues in many research domains This text is a collection of empirical and theoretical accounts for understanding context its focus is on integrating the study of context with the science of developmental psychology Although the authors work in many different areas of the field and with different populations they all converge on a central methodological conceptual theme of contextualism which is presented as the dynamic integration of intraindividual factors with environmental and social environmental factors

Tuberculosis: An Interdisciplinary Perspective John M Grange,John D H Porter,1999-03-26 The fact that the World Health Organization has declared tuberculosis a global emergency indicates the serious inadequacy of the ways in which the control methods at our disposal are used Several books on tuberculosis have been published in recent years but none have taken a deep and detailed look at the holistic aspects of global tuberculosis control even though international agencies are increasingly aware of the importance of the numerous factors other than the design and efficacy of therapeutic drug regimens This unique book fills that gap Although it deals specifically with tuberculosis the principles outlined and discussed are relevant to many other areas of global medicine including the ever growing problem of HIV AIDS The book is aimed principally at those involved in the design establishment and management of disease control programmes at international national and local levels and also at a more general readership of epidemiologists public health officers community psychologists and others interested in understanding the human dimension of disease control a Tuberculosis Wellman
