Human Evolution Roger Lewin, 2004-09-17 The brief length and focused coverage of Human Evolution An Illustrated Introduction have made this best selling textbook the ideal complement to any biology or anthropology course in which human evolution is taught The text places human evolution in the context of humans as animals while also showing the physical context of human evolution including climate change and the impact of extinctions Chapter introductions numerous drawings and photographs and an essential glossary all add to the accessibility of this text The fifth edition has been thoroughly updated to include coverage of the latest discoveries and perspectives including New early hominid fossils from Africa and Georgia and their implications New archaeological evidence from Africa on the origin of modern humans Updated coverage of prehistoric art including new sites New perspectives on molecular evidence and their implications for human population history An Instructor manual CD ROM for this title is available Please contact our Higher Education team at HigherEducation.wiley.com for more information

Human Evolution P. J. Andrews, C. B. Stringer, 1989-09-29 The development of our ancestors is traced by fossil evidence of various ancestral groups in a survey that expands from man's earliest beginnings through the emergence of modern humans

Becoming Human Ian Tattersall, 1999 Explores the evolution of humankind who we are where we came from and where we are going

Human Evolution Bernard Wood, 2019-06-27 The study of human evolution is advancing rapidly Newly discovered fossil evidence is adding ever more pieces to the puzzle of our past whilst revolutionary technological advances in the study of ancient DNA are completely reshaping theories of early human populations and migrations In this Very Short Introduction Bernard Wood traces the history of paleoanthropology from its beginnings in the eighteenth century to the very latest fossil finds In this new edition he discusses how Ancient DNA studies have revolutionized how we view the recent post 550 ka human evolution and the process of speciation The combination of ancient and modern human DNA has contributed to discoveries of new taxa as well as the suggestion of ghost taxa whose fossil records still remain to be discovered Considering the contributions of related sciences such as paleoclimatology geochronology systematics genetics and developmental biology Wood explores our latest understandings of our own evolution

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Principles of Human Evolution Robert Andrew Foley, Roger Lewin, 2013-05-03 Principles of Human Evolution presents an in depth introduction to paleoanthropology and the study of human evolution Focusing on the fundamentals of evolutionary theory and how these apply to ecological molecular genetic paleontological and archeological approaches to important questions in the field this timely textbook will help students gain a perspective on human evolution in the context of modern biological thinking The second edition of this successful text features the addition

of Robert Foley a leading researcher in Human Evolutionary Studies to the writing team Strong emphasis on evolutionary theory ecology and behavior and scores of new examples reflect the latest evolutionary theories and recent archaeological finds More than a simple update the new edition is organized by issue rather than chronology integrating behavior adaptation and anatomy A new design and new figure references make this edition more accessible for students and instructors New author Robert Foley leading figure in Human Evolutionary Studies joins the writing team Dedicated website www.blackwellpublishing.com/lewin provides study resources and artwork downloadable for Powerpoint presentations Beyond the Facts boxes explore key scientific debates in greater depth Margin Comments indicate the key points in each section Key Questions review and test students knowledge of central chapter concepts and help focus the way a student approaches reading the text New emphasis on ecological and behavioral evolution in keeping with modern research Fully up to date with recent fossil finds and interpretations integration of genetic and paleoanthropological approaches

Getting Here William White Howells, 1997 Three individuals left footprints in East Africa 3.7 million years ago Walking upright on human feet they had crossed a threshold in the long path of their evolution from vertebrates mammals and primates to enter and dominate a new world They were not alone Others related and descended in ways not entirely clear spread out flourished and disappeared some became the people of today Although we know a great deal of the story and new information is arriving ever more rapidly there is still more to be learned about where when and how our ancestors became us We do know that we arrived not because we were inevitable but by luck and happenstance along the way And we know there were other kinds of humans who co existed with each other and who might be here today but are not Now updated and revised to reflect the latest findings and their implications renowned anthropologist author and educator William Howells draws together here the latest from all today's sciences to tell the fascinating stories of our evolution

Theories of Human Evolution Peter J. Bowler, 1986 The question of human origin has always been disputed by evolution theorists This book provides a comprehensive survey of the debates over human evolution from the time of Darwin to the 1940s Part 1 discusses the early controversies noting that they focused on philosophical issues rather than causes or details of the evolutionary process A framework for the debate is outlined considering evolution theory with race culture and the progress of humankind Part 2 describes various theories including the Neanderthal Phase theory the Presapiens theory the Tarsioid theory and Polytypic theories Part 3 of the book deals with interpretations of the causes of human evolution Arguments are presented which relate to the factors of brain expansion upright posture and environment in the evolutionary process Trends in human evolution are discussed including convergence Lamarckism nonadaptive trends and orthogenesis The book ends with a review of arguments concerning Broom's 1933 question The coming of man was it accident or design An extensive listing of references is provided in a bibliography and note section TW

Human Evolution Bernard Campbell, 2017-09-04 In this new fourth edition Campbell has revised and updated his classic introduction to the field Human Evolution synthesizes the major

findings of modern research and theory and presents a complete and integrated account of the evolution of human beings. New developments in microbiology and recent fossil records are incorporated into the enormous range of this volume with the resulting text as lucid and comprehensive as earlier editions. The fourth edition retains the thematic structure and organization of the third with its cogent treatment of human variability and speciation, primate locomotion and nonverbal communication and the evolution of language supported by more than 150 detailed illustrations and an expanded and updated glossary and bibliography. As in prior editions the book treats evolution as a concomitant development of the main behavioral and functional complexes of the genus *Homo* among them motor control and locomotion, mastication and digestion, the senses and reproduction. It analyzes each complex in terms of its changing function and continually stresses how the separate complexes evolve interdependently over the long course of the human journey. All these aspects are placed within the context of contemporary evolutionary and genetic theory, analyses of the varied extensions of the fossil record and contemporary primatology and comparative morphology. The result is a primary text for undergraduate and graduate courses, one that will also serve as required reading for anthropologists, biologists and nonspecialists with an interest in human evolution.

Developmental Approaches to Human Evolution Julia C. Boughner, Campbell Rolian, 2016-01-22. Developmental Approaches to Human Evolution encapsulates the current state of evolutionary developmental anthropology. This emerging scientific field applies tools and approaches from modern developmental biology to understand the role of genetic and developmental processes in driving morphological and cognitive evolution in humans, non-human primates and in the laboratory organisms used to model these changes. Featuring contributions from well established pioneers and emerging leaders, this volume is designed to build research momentum and catalyze future innovation in this burgeoning field. The book's broad research scope encompasses soft and hard tissues of the head and body including the skeleton, special senses and the brain. Developmental Approaches to Human Evolution is an invaluable resource on the mechanisms of primate and vertebrate evolution for scholars across a wide array of intersecting disciplines including primatology, paleoanthropology, vertebrate morphology, evolutionary developmental biology and health sciences.

Tales of the Ex-Apes Jonathan Marks, 2015-09-08. This book is about the irreducibility of human evolution to purely biological properties and processes. For human evolution has incorporated the emergence of social relations and cultural histories that are unprecedented in the apes. Human evolution over the last few million years has involved the transformation from biological evolution into biocultural evolution. For several million years human intelligence, dexterity and technology all co-evolved with one another although the first two are organic properties and the last is inorganic. Over the last few tens of thousands of years the development of new social roles notably spouse, father, in-laws and grandparents have been combined with new technologies and symbolic meanings to produce the familiar human species. This leads to a fundamental evolutionary understanding of humans as biocultural, *ex-apes*, reducible neither to an imaginary cultureless biological core nor to our ancestry as apes. Consequently there can be no natural history

of the human condition or the human organism which is not a natural cultural history Provided by publisher **The Science of Human Evolution** John H. Langdon, 2016-10-25 This textbook provides a collection of case studies in paleoanthropology demonstrating the method and limitations of science These cases introduce the reader to various problems and illustrate how they have been addressed historically The various topics selected represent important corrections in the field some critical breakthroughs models of good reasoning and experimental design and important ideas emerging from normal science **A Story of Us** Lesley Newson, Peter Richerson, 2021-02-19 It's time for a story of human evolution that goes beyond describing ape men and talks about what women and children were doing In a few decades a torrent of new evidence and ideas about human evolution has allowed scientists to piece together a more detailed understanding of what went on thousands and even millions of years ago We now know much more about the problems our ancestors faced the solutions they found and the trade offs they made The drama of their experiences led to the humans we are today an animal that relies on a complex culture We are a species that can and does rapidly evolve cultural solutions as we face new problems but the intricacies of our cultures mean that this often creates new challenges Our species unique capacity for culture began to evolve millions of years ago but it only really took off in the last few hundred thousand years This capacity allowed our ancestors to survive and raise their difficult children during times of extreme climate chaos Understanding how this has evolved can help us understand the cultural change and diversity that we experience today Lesley Newson and Peter Richerson a husband and wife team based at the University of California Davis began their careers with training in biology The two have spent years together and individually researching and collaborating with scholars from a wide range of disciplines to produce a deep history of humankind In *A Story of Us* they present this rich narrative and explain how the evolution of our genes relates to the evolution of our cultures Newson and Richerson take readers through seven stages of human evolution beginning seven million years ago with the apes that were the ancestors of humans and today's chimps and bonobos The story ends in the present day and offers a glimpse into the future **Human Evolution** Rusty Huddle, 2016-12-15 Knowledge of ancestral species and of the places in which humans evolved provides context for an understanding of human genetic and evolutionary relationships with other species Knowing how early humans survived and how they used available resources offers insight into human instinct and behavior Readers are treated to a general overview of evolution Charles Darwin's theory of evolution and an introduction to the relevant fossil record They will also consider the likely beginnings of human evolution the fossil evidence relevant theories and refinements in human traits and culture and the emergence of *Homo sapiens* as a modern species **Basics in Human Evolution** Michael P Muehlenbein, 2015-07-24 *Basics in Human Evolution* offers a broad view of evolutionary biology and medicine The book is written for a non expert audience providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field From evolutionary theory to cultural evolution this book fills gaps in the readers knowledge from various backgrounds and introduces them to thought leaders in human

evolution research Offers comprehensive coverage of the wide ranging field of human evolution Written for a non expert audience providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field Provides expertise from leading minds in the field Allows the reader the ability to gain exposure to various topics in one publication

Evolution Scientific American Editors, 2017-08-21 The complex story of human evolution is a tale seven million years in the making Each new discovery adds to or revises our story and our understanding of how we came to be the way we are In this eBook The Human Odyssey we explore the evolution of those characteristics that make us human The first section Where We Came From looks at our family tree and why some branches survived and not others Swings in climate are emerging as a factor in what traits succeeded and failed as we see in Climate Shocks meanwhile in Human Hybrids DNA analyses show that Homo sapiens interbred with other human species which played a key role in our survival Section Two What Makes Us Special examines those traits that separate us from other primates Recent data indicate that our hairless skin was important to the rise of other human features and other research is getting closer to illuminating how humans became monogamous as shown in The Naked Truth and Powers of Two respectively In the final section Where We Are Going we speculate on the future of human evolution in a world where advances in technology medicine and other areas protect us from harmful factors like disease causing some scientists to claim that humans are no longer subject to natural selection and our evolution has ceased Far from that in Still Evolving author John Hawks discusses how humans have evolved rapidly over the past 30 000 years as seen in relatively recent traits like blue eyes or lactose tolerance why such rapid evolution has been possible and what future generations might look like Like us our story will continue to evolve

The Stages of Human Evolution C. Loring Brace, 1995 This book is intended as a core book in human evolution studies and been greatly expanded to reflect current research data

Human Evolution John H. Langdon, 2023-01-01 This is an introductory textbook for the study of human evolution and covers all major topics of human origins taught under paleoanthropology anthropology archaeology and evolutionary biology courses This book differs from the existing selection of textbooks in the following ways It incorporates the most recent fossil discoveries and interpretations It balances the discussion between descriptions of fossils and interpretations of behavior of hominins in different time periods It includes current findings of genomics into understanding the more recent stages of human evolution This important subdiscipline is badly underserved by current texts It consistently addresses the relationship of evidence to our current hypotheses and interpretations The book has an engaging and lucid style suitable for those entering the field Students will find ample case studies illustrations and examples helpful in understanding difficult concepts Tables timelines and maps in every chapter include data summaries and key points The book highlights peripheral points and background concepts in side boxes for easy reference and lists key ideas at the end of each chapter This up to date and easy to read text is suitable for both classroom study and self learning

Women in Human Evolution Lori D. Hager, 1997 This volume the first of its kind examines the role of women paleontologists and archaeologists in a field traditionally dominated by men Women researchers in this field have questioned many of the assumptions and developmental scenarios advanced by male scientists As a result of such efforts women have forged a more central role in models of human development and have radically altered the way in which human evolution is perceived This history of the feminist critique of science is of profound significance and will be of interest to all those who work in the fields of anthropology archaeology paleontology and human biology

Kinship and Human Evolution Steen Bergendorff, 2016-03-07 Kinship and Human Evolution Making Culture Becoming Human offers an exciting new explanation of human evolution Based on insights from anthropology it shows how humans became cultured beings capable of symbolic thought by developing kinship based exchange relationships Kinship was as an adaptive response to the harsh environment caused by the last major ice age In the extreme ice age conditions natural selection favored those groups that could forge and sustain such alliances and the resulting relationships enabled them to share different food resources between groups Kinship was a means of symbolically linking two or more groups to the mutual reproductive advantage of both From an evolutionary point of view kinship freed humans from their dependence on their immediate environment vastly expanding the niches they could occupy If we take kinship to be the major factor in human evolution networks and alliances must precede cultural units becoming the defining element of localized cultures Kinship and Human Evolution argues that it is living in networks that produces cultural differences and not culturally different groups that encounter one another it shows that kinship both saved and created humanity as we know it in all its cultural diversity
