Philip Ball, 2019-10-16 Two summers ago scientists removed a tiny piece of flesh from Philip Ball's arm and turned it into a rudimentary mini brain The skin cells removed from his body did not die but were instead transformed into nerve cells that independently arranged themselves into a dense network and communicated with each other exchanging the raw signals of thought This was life but whose In his most mind bending book yet Ball makes that disconcerting question the focus of a tour through what scientists can now do in cell biology and tissue culture He shows how these technologies could lead to tailor made replacement organs for when ours fail to new medical advances for repairing damage and assisting conception and to new ways of growing a human For example it might prove possible to turn skin cells not into neurons but into eggs and sperm or even to turn oneself into the constituent cells of embryos Such methods would also create new options for gene editing with all the attendant moral dilemmas Ball argues that such advances can therefore never be about just the science because they come already surrounded by a host of social narratives preconceptions and prejudices But beyond even that these developments raise questions about identity and self birth and death and force us to ask how mutable the human body really is and what forms it might take in years to come *Student Study Guide/Solutions Manual for Essentials of General, Organic, and Biochemistry* Denise Guinn, Rebecca Brewer, Rachel C.
