and mechanisms grant us the capacity to turn a blind eye with an air of detachment Heat A History shows how scientific methods of accounting for heat and modern forms of acclimatization have desensitized us to climate change Ubiquitous air conditioning shifts in urban planning and changes in mobility all served as temporary remedies for escaping the heat in hotspots such as the twentieth century Middle East However all these measures have ultimately fuelled not only greenhouse gas emissions but also a collective myopia regarding the impact of rising temperatures Identifying the scientific abstractions and economic and cultural forces that have numbed our responses this book charts a way forward out of short term thinking and towards meaningful action

Biomedical Engineering Science and Technology Bikesh Kumar Singh, G.R. Sinha, Rishikesh Pandey, 2024-03-14 This CCIS post conference volume constitutes the proceedings of the Second International Conference ICBEST 2023 in Raipur India in February 2023 The 32 full papers together in this volume were carefully reviewed and selected from 60 submissions The conference's fundamental theme was Computing in Biomedical Research They were organized in three tracks as follows Artificial Intelligence in Healthcare Computational Mechanics in Healthcare and Health Informatics Thermotherapy for Neoplasia, Inflammation, and Pain M. Kosaka, T. Sugahara, K.L. Schmidt, E. Simon, 2013-04-17 This book provides a comprehensive overview of the multitude of different forms of thermotherapy in connection with aspects of thermal physiology and cell biology The aim is to elucidate the scientific background of therapeutic actions and to promote effective new applications at the beginning of the 21st century Significant to these purposes is cooperation between experts in the fields of thermal biology hyperthermic oncology rheumatology and balneology as represented by the editors Emphasis has been placed on a balanced choice of contributions in the hope that this will enable the reader to draw helpful connections between the principles and practice of thermotherapy It is apparent that a wealth of published data exists concerning thermotherapy on the one hand and thermal physiology on the other However in the former field empirical aspects of therapeutic usefulness prevail while in the latter aspects of basic science are in the foreground Accordingly the sources where published data may be found are quite different and as a consequence many findings of potential mutual interest published in medical journals have gone unnoticed by readers of physiological journals and vice versa It is hoped that this
