Anthropology and the Human Subject Brian Morris, 2014-04-07 The German philosopher Immanuel Kant famously defined anthropology as the study of what it means to be a human being Following in his footsteps Anthropology and the Human Subject provides a critical comprehensive and wide ranging investigation of conceptions of the human subject within the Western intellectual tradition focusing specifically on the secular trends of the twentieth century Encyclopaedic in scope lucidly and engagingly written the book covers the man and varied currents of thought within this tradition Each chapter deals with a specific intellectual paradigm ranging from Marxs historical materialism and Darwins evolutionary naturalism and their various off shoots through to those currents of thought that were prominent in the late twentieth century such as for example existentialism hermeneutics phenomenology and poststructuralism With respect to each current of thought a focus is placed on their main exemplars outlining their biographical context their mode of social analysis and the ontology of the subject that emerges from their key texts The book will appeal not only to anthropologists but to students and scholars within the human sciences and philosophy as well as to any person interested in the question What does it mean to be human Ambitions in scope and encyclopaedic in execution his style is always lucid He makes difficult work accessible His prose conveys the unmistakable impression of a superb and meticulous lecturer at work Anthony P Cohen Journal Royal Anthropological Institute There is a very little I can add to the outstanding criticism Brian Morris levels at deep ecology Insightful as well as incisive I have found his writings an educational experience Murray Bookchin Institute of Social Ecology

Technology, Media Literacy, and the Human Subject Richard S. Lewis, 2021-06-03 Media literacy is often focused on evaluating the message rather than reflecting on the medium Bringing together postphenomenology media ecology posthumanism and complexity theory Richard Lewis s book offers a method for such a reflection and shows how our everyday media environments constitute us as post human subjects one that is becoming and constitutes through relations also with our media technologies An original interdisciplinary effort including for example the term intrasubjective mediation and a must read book for everyone interested in how we become with and through technologies Prof Mark Coeckelbergh University of Vienna Technology Media Literacy and the Human Subject is a clearly and concisely written book that employs a fruitful transdisciplinary approach It at once offers an excellent grounding in the literature whilst simultaneously developing a useful tool for students to reflect deeply and critically upon their own engagement with media Thoroughly recommended Alexander Thomas University of East London What does it mean to be media literate in today s world How are we transformed by the many media infrastructures around us We are immersed in a

world mediated by information and communication technologies ICTs From hardware like smartphones smartwatches and home assistants to software like Facebook Instagram Twitter and Snapchat our lives have become a complex interconnected network of relations Scholarship on media literacy has tended to focus on developing the skills to access analyze evaluate and create media messages without considering or weighing the impact of the technological medium how it enables and constrains both messages and media users Additionally there is often little attention paid to the broader context of interrelations which affect our engagement with media technologies This book addresses these issues by providing a transdisciplinary method that allows for both practical and theoretical analyses of media investigations Informed by postphenomenology media ecology philosophical posthumanism and complexity theory the author proposes both a framework and a pragmatic instrument for understanding the multiplicity of relations that all contribute to how we affect and are affected by our relations with media technology The author argues persuasively that the increased awareness provided by this posthuman approach affords us a greater chance for reclaiming some of our agency and provides a sound foundation upon which we can then judge our media relations This book will be an indispensable tool for educators in media literacy and media studies as well as academics in philosophy of technology media and communication studies and the post humanities

Research for Engineers Joost C.F. de Winter,Dimitra Dodou,2017-05-17 This Brief introduces engineers to the main principles in ethics research design statistics and publishing of human subject research In recent years engineering has become strongly connected to disciplines such as biology medicine and psychology Often engineers and engineering students are expected to perform human subject research Typical human subject research topics conducted by engineers include human computer interaction e g evaluating the usability of software exoskeletons virtual reality teleoperation modelling of human behaviour and decision making often within the framework of big data research product evaluation biometrics behavioural tracking e g of work and travel patterns or mobile phone use transport and planning e g an analysis of flows or safety issues etc Thus it can be said that knowledge on how to do human subject research is indispensable for a substantial portion of engineers Engineers are generally well trained in calculus and mechanics but may lack the appropriate knowledge on how to do research with human participants In order to do high quality human subject research in an ethical manner several guidelines have to be followed and pitfalls have to be avoided This book discusses these guidelines and pitfalls The aim is to prepare engineers and engineering students to carry out independent research in a responsible manner **Human**

Recovering the Human Subject James Laidlaw, Barbara Bodenhorn, Martin Holbraad, 2018-02-15 This volume responds to the often proclaimed death of the subject in post structuralist theorizing and to calls from across the social sciences for post humanist alternatives to liberal humanism in a distinctively anthropological manner It asks can we use the intellectual resources developed in those approaches and debates to reconstruct a new account of how individual human subjects are contingently put together in diverse historical and ethnographic contexts Anthropologists know that the people they work with think in terms of particular distinctive individual human personalities and that in times of change and crisis these individuals matter crucially to how things turn out The volume features a classic essay by Caroline Humphrey Reassembling individual subjects that provides a focus for the debate and it brings together a distinguished collection of essays which exhibit a range of theoretical approaches and rich and varied ethnography

Biomedical Research Ethics and the Protection of Human Research Subjects, Hearings Before ..., 93-1, September 27 and 28, 1973 United States. Congress. House. Committee on Interstate and Foreign Commerce, 1974 *Ethics of the Use of Human Subjects in Research* Adil Shamoo, Felix A. Khin-Maung-Gyi, 2021-03-05 Media headlines about research misconduct in American Universities have focused public attention on the dramatic ethical problems that can arise during the conduct of research In the current atmosphere of accountability scientific research on humans is now under increased scrutiny by the media Congress and the public *Ethics of the Use of Human Subjects in Research* fills the need for learning materials and strategies providing support for training programs related to the ethics of the use of human subjects in research It presents a practical introduction to the ethical issues at stake in the conduct of research with human subjects Beginning with a chapter on research ethics a total of 10 chapters range in scope from the development of a protocol for ethical decision making to how to obtain IRB approval with an emphasis on ethical factors underpinning the IRB process *Futures of the Human Subject* Sławomir Koziół, 2022-09-07 *Futures of the Human Subject* focuses on the representation of the effects of technology use on human subjectivity in several recent near future science fiction novels Sharing the idea that human subjects are constructed in the world in which they

exist this volume inscribes itself in the wider field of posthumanism which contests the liberal humanist notion of people as self contained autonomous agents At the same time it is the first substantial study of literary representations of the human subject carried out within the conceptual framework of Foucault inflected philosophy of technical mediation which examines the nature of the relation between people and specific technologies as well as the way in which this relation affects human subjectivity As such the book may help readers to exercise more effective control over the way in which they are constituted as subjects in this technologically saturated world

Protection of Human Research Subjects D.M. Maloney,2012-12-06 Regulations on human subjects research have evolved over a 20 year period and now provide a formal set of requirements for the conduct of federally sponsored studies Over time government regulations like taboos in primitive societies develop a life of their own seemingly dissociated from their origins and justifications When the investigator suffers the burdens of trying to comply with complex rules it is easy for him or her to lapse into a frustration that can be eased by being informed or reminded of why the rules were created in the first place and what they were designed to accomplish Dennis Maloney's work provides a handy historical record of the processes by which the regulations were created and modified He also recounts his own experience with research at Boys Town and provides instructions on how to cope with the system It is difficult to find in one place the current status and appropriate citations for regulations as well as the contacts and know how to obtain more information on the subject In this respect by providing a history and guide to interpretation and compliance Protection of Human Subjects is a reference of importance and utility to the investigator entering into or working in the field of biomedical or behavioral research involving human subjects

The Ethical Challenges of Human Research Franklin G. Miller,2012-06-01 The use of human beings as research subjects poses distinctive ethical issues Subjects of medical research are exposed to risks of harm for the sake of generating scientific knowledge that can benefit future patients and society Ethical analysis of the challenges posed by research involving human subjects requires careful attention to the contextual details of scientific experimentation This book contains 22 essays by Franklin G Miller on research ethics written over a 15 year period With the exception of the first essay all have been previously published in bioethics and medical journals The book is arranged into four parts Part One addresses a general ethical perspective on the protection of human subjects in clinical research including paternalism in research regulation and acceptable limits to research risks The essays in Part Two examine ethical issues in study design It includes ethical analyses of controversial types of medical experimentation studies that provoke psychiatric symptoms induce infections provide patients with placebos that withhold proven effective treatments or administer fake invasive procedures test experimental treatments in cancer patients who have exhausted all standard treatment options and employ the use of deception to generate scientifically valid data Part Three offers a systematic critique of the therapeutic orientation to clinical trials and

the principle of clinical equipoise which is widely regarded as a fundamental norm for randomized treatment studies Part Four takes up a range of ethical issues relating to informed consent for research participation including examination of the therapeutic misconception and presentation of a novel approach to the validity of consent the fair transaction model An abiding theme developed in many of the essays is that the ethics of clinical research is importantly different from the ethics of medical care
