

1 Explaining Humor: A Historical Overview

It is impossible to determine when human beings first began to puzzle over the nature and functions of humor. It is likely, though, that they have pondered over humor for as long as they have sought to understand their own nature. One longstanding approach to defining "human nature" has been to contrast human behavior and capacities with those of other animals. For example, human beings have always been thought to be unique because they possess language abilities, highly developed thought capacities, and a sense of humor. But these views have been undergoing radical changes in the past decade or so, especially as a result of recent efforts to teach some form of language to apes. It will be seen in Chapter 3 that the intellectual and language-learning capacities of chimpanzees and gorillas are far greater than has been believed. Most important, given the subject of this book, language-using apes seem to exhibit a sense of humor surprisingly similar to that of young preschool children. Thus, basic assumptions about capacities thought to be particularly human that have stood for centuries may soon need to be changed.

Explanations of humor by philosophers and other writers have been recorded at least as far back as the early Greeks. In many cases, in spite of differences in terminology, these early explanations emphasize qualities still thought to be of significance today. In fact, it is tempting, upon reading early philosophical writings about humor, to conclude that, just as there are really no new jokes (many comedians claim that there are no new jokes, arguing that each is simply a take-off on an old and familiar joke; the joke structure is the same, even though the specific content may vary), there are no completely new ideas when it comes to explaining humor. Has it all been said before? Actually, there are a few original breakthroughs in modern conceptions

McGhee, J.H. Goldstein, 2012-12-06 About a decade ago we edited The Psychology of Humor Besides the summary chapter and bibliography of about 400 items the book contained eleven original papers that represented the state of knowledge at that time We confess that it was not easy to fill that volume with first rate contributions In a few instances we invited contributors only on the basis of having heard through the grapevine that they were doing interesting work on humor Our sources proved reliable and we were pleased with the results We even made new friends as a result of these blind invitations But the fact remains that in the early 1970s there was only a handful of social scientists studying humor and laughter The history of humor research prior to the 1970s can also be characterized in terms of the short term commitment to investigating humor among those who did venture out and try their hand at designing humor studies For reasons that remain unclear many investigators published only one or

two humor studies before abandoning the area in favor of some other research domain We have the impression that for decades social scientists have been very intrigued by the idea of studying humor Psychologists have suspected for a long time that humor somehow is very important in the lives of people We find laughter and humor occurring almost wherever we find people engaged in social interaction

How Infants Know Minds Vasudevi Reddy, 2010-03-15 Most psychologists claim that we begin to develop a theory of mind some basic ideas about other people's minds at age two or three by inference deduction and logical reasoning But does this mean that small babies are unaware of minds That they see other people simply as another rather dynamic and noisy kind of object This is a common view in developmental psychology Yet as this book explains there is compelling evidence that babies in the first year of life can tease pretend feel self-conscious and joke with people Using observations from infants everyday interactions with their families Vasudevi Reddy argues that such early emotional engagements show infants growing awareness of other people's attention expectations and intentions Reddy deals with the persistent problem of other minds by proposing a second person solution we know other minds if we can respond to them And we respond most richly in engagement with them She challenges psychology's traditional detached stance toward understanding people arguing that the most fundamental way of knowing minds both for babies and for adults is through engagement with them According to this argument the starting point for understanding other minds is not isolation and ignorance but emotional relation
