Knowledge and Its Limits Timothy Williamson,2002 Knowledge and its Limits presents a systematic new conception of knowledge as a fundamental kind of mental state sensitive to the knower s environment It makes a major contribution to the debate between externalist and internalist philosophies of mind and breaks radically with the epistemological tradition of analysing knowledge in terms of true belief The theory casts light on a wide variety of philosophical issues the problem of scepticism the nature of evidence probability and assertion the dispute between realism and anti realism and the paradox of the surprise examination Williamson relates the new conception to structural limits on knowledge which imply that what can be known never exhausts what is true The arguments are illustrated by rigorous models based on epistemic logic and probability theory The result is a new way of doing epistemology for the twenty first century **The Science of Moral**

Nature Considered. Revised Edition. And an Introductory Discourse on Two Essays of Mr. David Hume, Viz. "Of the Idea of Necessary Connection," and "of a Providence and Future State." [Nos. 7 and 11 of Hume's "Philosophical Essays".] George Giles VINCENT, 1856 **Causality and Mind** Nicholas Jolley, 2013-11-28 Causality and Mind presents seventeen of Nicholas Jolley's essays on early modern philosophy which focus on two main themes. One theme is the continuing debate over the nature of causality in the period from Descartes to Hume. Jolley shows that despite his revolutionary stance, Descartes did no serious rethinking about causality; it was left to his unorthodox disciple Malebranche to argue that there is no place for natural causality in the new mechanistic picture of the physical world. Several essays explore critical reactions to Malebranche's occasionalism in the writings of Leibniz, Berkeley, and Hume, and show how in their different ways Leibniz and Hume respond to Malebranche by reinstating the traditional view that science is the search for causes. A second theme of the volume is the set of issues posed by Descartes' innovations in the philosophy of mind. It is argued that Malebranche is once again a pivotal figure. In opposition to Descartes, Malebranche insists that ideas, the objects of thought, are not psychological but abstract entities; he thus opposes Descartes' dustbin theory of the mind. Malebranche also challenges Descartes' assumption that intentionality is a mark of the mental and his commitment to the superiority of self-knowledge over knowledge of body. Other essays discuss the debate over innate ideas, Locke's polemics against Descartes' theory of mind, and the issue of Leibniz's phenomenalism. A major aim of the volume is to show that philosophers in the period are systematic critics of their contemporaries and predecessors.

From the Nature of the Mind to Personal Dignity Juan F. Franck, 2006 What Aristotle described as the light of the intellect, the *lumen intellectuale* for the Scholastics, is brought into play in the epistemological discussion not just to develop an innovative theory of knowledge but also to account for the constitution of the human mind as a foundation for ethical principles and as the starting point of a more comprehensive ontology where the person is given his due place. Rosmini links one subject with another, respecting each field at the same time, with a stunning example of an encyclopedic way of thinking. Philosophers aiming at renovation in continuity will also find in him a vigorous model and an unprecedented challenge.
