Knowledge As Design David N. Perkins, 2013-11-26 First published in 1986 We all play the roles of teacher or learner many times in life in school and home on the job and even at play How can we strengthen those roles striving for deep understanding and sound thinking Knowledge As Design demonstrates the strong but neglected unity between learning and critical and creative thinking Author David Perkins discloses how the concept of design opens a doorway into a deeper exploration of any topic academic or every day Knowledge As Design challenges the concept of knowledge as information Drawing from current philosophy and cognitive science the book shows how learners can attain a new level of insight when learning highlights the constructed and constructive character of knowledge Any individual involved in formal or informal learning or teaching can benefit from the general outlook and specific principles laid out in this book It offers a uniquely intelligent philosophy and psychology of understanding and critical and creative thinking

What Designers Know Bryan Lawson,2012-08-06 Each chapter deals with a different technique from which we can best represent and make explicit the forms of knowledge used by designers The book explores whether design knowledge is special and attempts to get to the root of where design knowledge comes from Crucially it focuses on how designers use drawings in communicating their ideas and how they converse with them as their designs develop It also shows how experienced designers use knowledge differently to novices suggesting that design expertise can be developed Overall this book builds a layout of the kinds of skill knowledge and understanding that make up what we call designing

Thoughtful Interaction Design Jonas Lowgren,Erik Stolterman,2007-01-26 The authors of Thoughtful Interaction Design go beyond the usual technical concerns of usability and usefulness to consider interaction design from a design perspective The shaping of digital artifacts is a design process that influences the form and functions of workplaces schools communication and culture the successful interaction designer must use both ethical and aesthetic judgment to create designs that are appropriate to a given environment This book is not a how to manual but a collection of tools for thought about interaction design Working with information technology called by the authors the material without qualities interaction designers create not a static object but a dynamic pattern of interactivity The design vision is closely linked to context and not simply focused on the technology The authors action oriented and context dependent design theory drawing on design theorist Donald Schön's concept of the reflective practitioner helps designers deal with complex design challenges created by new technology and new knowledge Their approach based on a foundation of thoughtfulness that acknowledges the designer's responsibility not only for the functional qualities of the design product but for the ethical and aesthetic qualities as well fills the need for a theory of interaction design that can increase and nurture design knowledge From this perspective they address the fundamental question of what kind of knowledge an aspiring designer needs discussing the process of design the designer design methods and techniques the design product and its qualities and conditions for interaction design

Maher, 2013-05-13 Over the last decade research into design processes utilizing ideas and models drawn from artificial intelligence has resulted in a better understanding of design particularly routine design as a process Indeed most of the current research activity directly or indirectly deals only with routine design Not surprisingly many practicing designers state that the level of understanding represented by these models is only of mild interest because they fail to embody any ideas about creativity This volume provides a set of chapters in the areas of modeling creativity and knowledge based creative design that examines the potential role and form of computer aided design which supports creativity It aims to define the state of the art of computational creativity in design as well as to identify research directions Published at a time when the field of computational creativity in design is still immature it should influence the directions of growth and assist the field in reaching maturity **At the Intersection of Indigenous and Traditional Knowledge and Technology**

Design Nicola Bidwell, Heike Winschiers-Theophilus, 2015 There is intensified interest in designing information and communication technologies ICTs that respond to ways of doing knowing and saying that differ from those that dominate in producing ICTs and in particular to traditional or indigenous knowledges ICT endeavours for indigenous or traditional knowledges ITK vary Some aim to extend ITK digitally and others use ICTs to improve the economic and or political situation of marginalised groups This book presents themes that arise in designing to respond to ITK in different cultural social physical and historical contexts Integration of Process Knowledge into Design Support Systems Hubert Kals, Fred van

Houten, 2013-04-17 Design is a fundamental creative human activity This certainly applies to the design of artefacts the realisation of which has to meet many constraints and ever raising criteria The world in which we live today is enormously influenced by the human race Over the last century these artefacts have dramatically changed the living conditions of humans The present wealth in very large parts of the world depends on it All the ideas for better and new artefacts brought forward by humans have gone through the minds of designers who have turned them into feasible concepts and subsequently transformed them into realistic product models The designers have been still are and will remain the leading change agents in the physical world Manufacturability of artefacts has always played a significant role in design In pre industrial manufacturing the blacksmith held the many design and realisation aspects of a product in one hand The synthesis of the design and manufacturing aspects took almost implicitly place in the head of the man All the knowledge and the skills were stored in one person Education and training took place along the line of many years of apprenticeship When the production volumes increased assembling to measure was no longer tolerated and production efficiency became essential design process planning production planning and fabrication became separated concerns The designers created their own world separated from the production world They argued that restrictions in the freedom of designing would badly influence their creativity in
