Advance ,1987 **Participatory Development** ,1993 **Breeding for robustness in cattle**

Marija Klopčič, Reinhard Reents, Jan Philipsson, Abele Kuipers, 2023-09-04 The past decade has revealed unfavourable trends in e g fertility udder health and locomotion in some major dairy cattle breeds due to a large increase in production and insufficient consideration of functional traits in the breeding goals Such unfavourable trends in some functional traits increase costs Additionally the enlargement of herds leads to less available labour time per individual cow This asks for cows

that are easy to handle At the same time society is demanding a higher welfare standard of animals These contradicting developments have increased the desire for so called more robust animals Robustness can be defined as the ability to maintain homeostasis in commonly accepted and sustainable herds of the near future or the ability of the cow to function well in the environment she lives in as well as in a wide range of climates and production systems This book contains a series of articles 26 dealing with the concept of robustness including aspects like evolution genetics environment animal health and welfare and integrity Besides the major functional traits also the links to energy balance hot climatic conditions and the attitude and input of stakeholders towards robustness as part of the breeding program are discussed This book is the first attempt to summarise the available knowledge concerning this topic in cattle making this book unique The contributions are from authors of 16 countries from all over the world However the focus is presently on farm animal level while in future robustness of the whole production system may also require additional attention Participatory Development African

Development Foundation (U.S.),1997 **ADF-funded Projects** ,1989 The Art and Science of Animal Husbandry Harma Yknip,2025-02-04 Animal husbandry has evolved from early domestication to modern production balancing science and intuition This book explores its history principles and sustainability challenges It emphasizes humane practices environmental impact and efficient production methods while ensuring animal welfare As global demand for animal products rises sustainable and ethical practices are crucial Aimed at students producers and policymakers this book provides insights into the future of responsible animal agriculture **Information Resources on the Care and Welfare of Beef Cattle**

Cynthia Petrie Smith,2004 One of the main animal welfare concerns in beef cattle production is that of pain and distress Dehorning castration and branding are husbandry procedures which can cause pain and discomfort Less acute but still distressful are those issues related to the animal environment Extreme natural conditions can result in cattle that are heat and or cold stressed Drought and the resulting overstocking for available feed resources can also reduce body fatness These are important welfare issues in modern beef production The following bibliography explores these issues and more and should provide a useful resource for scientists veterinarians extension specialists students and others **Foreign**

Cattle husbandry in Eastern Europe and China Abele Kuipers,Andriy Rozstalnyy,Gerry Keane,2023-08-07 This book presents an analysis of the dairy and associated sector developments in Eastern Europe and China The transition in cattle husbandry in Eastern Europe resulting in enormous structural changes but not in an increased production volume is different from emerging countries like China where traditional small scale farming goes together with the remodelling or start of mega farms Capacity building by means of cooperation appears to be hindered by historical experience Farm development paths were studied in more depth in Poland Lithuania and Slovenia using detailed farmer surveys Farmers strategies

availability of resources and opportunities and threats were analysed and interactive group trainings in strategic management were part of the analysis The results are presented here Although farmers showed similar wishes concerning farm development the local environment and policies determines the degree of achievement Farm fragmentation the high percentage of rented land and availability of suitable labour are major constraints Future EU policies are a concern but new technologies are embraced This book is a must for those interested in the transition in Eastern Europe It is indispensable to consultants marketers companies farm leaders and government officials in agriculture

CSR and Sustainability Michael Hopkins, 2017-09-08 Corporate Social Responsibility CSR is steadily moving from the margins to the mainstream across the spectrum of private companies NGOs and the public sector It has grown from being a concept embraced by a small number of companies such as The Body Shop in the early 1990s to a widespread global movement At its weakest level it is represented by a few philanthropic gestures by organizations but when applied in its most complete form it can steer the organization or sector to deliver a fully fledged system wide multi stakeholder operation accompanied by multiple types of certification For the first time a book brings together key issues relating to CSR as they apply to different aspects of business it is not another generalist title about CSR Michael Hopkins a leading expert in the field is joined by a number of outstanding contributors to the book to explain how CSR has evolved since the 1990s and to offer ground breaking insights and practical and specific applications of the concept For example Mervyn King explains Integrating Reporting Deborah Leipziger looks at the laws and standards for CSR Branding and the Supply Chain George Starcher provides a framework for Socially Responsible Restructuring and Adrian Henriques explores Social Accounting and Stakeholder Dialogue

Livestock Genomics and Community-based Breeding Strategies in Low-and-Middle-Income Countries: Challenges, Opportunities and Future Perspectives Isidore Houaga, Maria Wurzinger, Ntanganedzeni Mapholi, 2024-07-17 Low and

Middle Income Countries LMICs are home to diverse populations of livestock species adapted to various agro ecological zones production systems and harsh environmental conditions However the livestock in LMICs have not been systematically improved and current low levels of productivity do not meet the demand for livestock products by a growing population Recent advances in next generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success Despite the low adoption of genomic breeding in LMICs livestock industry various studies and programs were initiated and some are still ongoing Furthermore community based breeding programs CBBP have been initiated in many LMICs with great benefits for smallholder livestock farmers CBBPs are based on the active participation of farmers from inception through to implementation and consider their needs views decisions breeding objectives and available infrastructure In Africa for instance small ruminants CBBPs have generated substantial genetic gains and socioeconomic benefits for rural poor farmers However the current challenges affecting the data recording and genetic evaluation of the CBBPs in LMICS are yet to be fully reported Furthermore the CBBPs are yet to integrate genomic selection in their breeding strategies For sustainable livestock breeding in LMICs there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans In this Research Topic we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives

Adaptation and Fitness in Animal Populations Julius van der Werf,Hans-Ulrich Graser,Richard Frankham,Cedric Gondro,2008-10-17 Fitness and adaptation are fundamental characteristics of plant and animal species enabling them to survive in their environment and to adapt to the inevitable changes in this environment This is true for both the genetic resources of natural ecosystems as well as those used in agricultural production Extensive genetic variation exists between varieties breeds in a species and amongst individuals within breeds This variation has developed over very long periods of time A major ongoing challenge is how to best utilize this variation to meet short term demands whilst also conserving it for longer term possible use Many animal breeding programs have led to increased performance for production traits but this has often been accompanied by reduced fitness In addition the global use of genetic resources prompts the question whether introduced genotypes are adapted to local production systems Understanding the genetic nature of fitness and adaptation will enable us to better manage genetic resources allowing us to make efficient and sustainable decisions for the improvement or breeding of these resources This book had an ambitious goal in bringing together a sample of the world s leading scientists in animal breeding and evolutionary genetics to exchange knowledge to advance our understanding of these vital issues The role of livestock in food security, poverty reduction and wealth creation in West Africa Food and Agriculture Organization of the United Nations ,2020-07-01 With the objective of gaining a better insight into the challenges and opportunities of the livestock sub sector in

West Africa FAO has conducted several studies and held various workshops in recent years The outcomes of these studies and workshops conducted between 2009 and 2014 were published and distributed as hard copy reports and disseminated as on line publications These reports included topics such as value chains cross border transhumance animal feed resources priority animal diseases among others were informative in their own right Still the fact that they targeted specific areas of livestock in a fragmented manner did not address the need of readers whose wish was to have a comprehensive understanding of the livestock sector in West Africa It is in response to this demand for a comprehensive outlook of the West African Livestock sub sector that different reports and studies have been compiled into this one book The book has twelve chapters covering almost all aspects of livestock in the region Attempts were made to enrich the information provided by including eight short case studies focusing on different aspects of the livestock sub sector in West Africa The book attempts to fill the gap of a need for comprehensive information on the potential performance challenges and prospects of the livestock sub sector in West Africa

The ethics of consumption Helena Röcklinsberg,Per Sandin,2013-11-05 We are all consumers What we consume how and how much has consequences of great moral importance for humans animals and the environment Great challenges lie ahead as we are facing population growth and climate change and reduced availability of fossil fuels It is often argued that key to meeting those challenges is changing consumption patterns among individual as well as institutions for instance through reducing meat consumption switching to organic or fair trade products boycotting or buycotting certain products or consuming less overall There is considerable disagreement regarding how to bring this about whose responsibility it is and even whether it is desirable Is it a question of political initiatives producer responsibility the virtues and vices of individual consumers in the developed world or something else Many of these issues pose profound intellectual challenges at the intersection of ethics

political philosophy economics and several other fields This publication brings together contributions from scholars in numerous disciplines including philosophy law economics sociology and animal welfare who explore the theme of the ethics of consumption from different angles *Animal Genetic Resources Information* Food and Agriculture Organization of the United Nations, 2007-07-30 This special issue reflects the efforts made by governments INGOs NGOs livestock keepers and FAO in the area of animal genetic resources It reviews the development of animal genetic resources related activities presents examples of breed improvement and conservation measures and discusses a number of policy issues Ce numero special refilete les efforts realises par les gouvernements les INGO et NGO les eleveurs et la FAO dans le domaine des ressources genetiques animales Il presente une revision du developpement des activites en relation avec les AnGR ainsi que des exemples sur l amelioration des races et sur les mesures de conservation et discute d un certain nombre de themes politiques Este numero especial refleja los esfuerzos realizados por los gobiernos las INGO y las NGO los ganaderos y la FAO en el terreno de los recursos zoogeneticos Se hace una revision del desarrollo de las actividades relacionadas con AnGR se presentan ejemplos de mejora de raza y medidas de conservacion y se discuten un cierto numero de temas politicos
