INTRODUCTION TO SIMILARITY

Notes & Practice

As shown in the diagram of $\triangle ABC$ and $\triangle DEF$ below, $\angle A \cong \angle D$, $\angle B \cong \angle E$, and $\angle C \cong \angle F$.

Describe a sequence of transformations that would map $\triangle DEF$ onto $\triangle ABC$.

In the example above, $\triangle DEF$ and $\triangle ABC$ are said to be similar because we can use a sequence of rigid motions and a dilation to map the figures onto one another.

In Geometry, for figures to be similar, they must satisfy two conditions:

1. Corresponding Angles are Congruent
2. Corresponding Sides are Proportional

Even though $\triangle ABC$ and $\triangle DEF$ are different size triangles, they are similar because their corresponding angles are congruent, and their corresponding sides are proportional.

$\frac{C}{E} = \frac{B}{F} = \frac{A}{D}$
