Human Cannon:

On the Trail of the Last Human Cannonball Byron Rogers, 2013-03-14 From a great journalist of the older school travel essays chronicling the author's search for incredible stories about extraordinary people The Guardian Byron Rogers latest collection of travel pieces follows the winning formula of his previous book *An Audience with an Elephant* as he goes in search of a remarkable array of quirky whimsical and singular individuals But in addition to meeting a pensioner on a holiday who decided to swim across the Amazon this book sees Rogers meeting a number of undeniably famous people But as one might expect Rogers encounters with celebrity have their own unexpected outcomes Burt Lancaster rants to him about transsexuality Rita Hayworth is most worried about her neighbor's TV aerial and a retired star of the silent screen turns out to live in Henley on Thames It is with the delicacy and determination of an archaeologist and the wit of a publican and far sightedness of a dreamer that Rogers excavates people and places Daily Telegraph A wonderful writer Droll poignant and dreamy New Statesman

Simulating Continuous Fuzzy Systems James J. Buckley, Leonard J. Jowers, 2008-01-25 1 1 Introduction This book is written in two major parts The first part includes the introductory chapters consisting of Chapters 1 through 6 In part two Chapters 7-26 we present the applications This book continues our research into simulating fuzzy systems We started with investigating simulating discrete event fuzzy systems 7-13-14 These systems can usually be described as queuing networks Items transactions arrive at various points in the system and go into a queue waiting for service The service stations preceded by a queue are connected forming a network of queues and service until the transaction finally exits the system Examples considered included Chinese shops emergency rooms project networks bus routes etc Analysis of all of these systems depends on parameters like arrival rates and service rates These parameters are usually estimated from historical data These estimators are generally point estimators The point estimators are put into the model to compute system descriptors like mean time an item spends in the system or the expected number of transactions leaving the system per unit time We argued that these point estimators contain uncertainty not shown in the calculations Our estimators of these parameters become fuzzy numbers constructed by placing a set of confidence intervals one on top of another Using fuzzy number parameters in the model makes it into a fuzzy system The system descriptors we want time in system number leaving per unit time will be fuzzy numbers
