Animated Model of the Foot Craig Nevin,2010-05-21 This thesis examines the anatomical locations of the dynamic pressures that create the first five footprints when a standing person starts to walk It is hypothesized that the primary activity starts with the dorsiflexion or lifting of the great toe Consequently the metatarsophalangeal region of the forefoot

was studied from three directions Viewed side on the great toe free body is found from a detailed post hoc analysis of previous kinematic data obtained from cadavers to operate as a cam The cam model also follows closely from Aristotle's ancient description of the hinged instrument of animate motion Viewed in coronal cross section the first metatarsal torsion strength was estimated in 13 humans 1 gorilla 3 chimpanzees 1 orangutan and 1 baboon set of dry bone specimens of the hands and feet The first metatarsal bone alone contributes 43% of the total strength of all the metatarsal bones A result unique amongst the hominids and apes studied Viewed in horizontal plan the dynamic components and principle axes of the footprints of 54 barefoot humans 32 male 22 female age 32 11 years were studied whilst standing on a 0.5m pressure plate and then immediately when walking over a 2m plate 4 sensors per cm² sampled at 100hz Two footprints were obtained during the initial stance posture and the first three footprints of the initial walk Three new principles of animate motion were deduced from the divergent results obtained from complete and dissected cadavers The metatarsal cam from the sagittal side view the ground reaction torque from the frontal coronal view and the amputation artifact The philosophy of experimenting on inanimate cadavers rather than living subjects was intensively researched Instead of assuming that gait is a uniform or regular motion as is usual the foot was analyzed rather as if it was a beam attached to the ground Engineering equations were used to determine the flexural properties of the foot every 0.01 seconds including the principle axes radius of gyration and the local shear stresses on the sensors spaced 5.7mm apart A sequence of these impressions creates a mathematically animated model of the footprint The local force under the foot was normalized against both the total force and contact duration The forces under the foot were each divided between 10 anatomical regions using individual masks for each foot strike Producing a 54 subject database from which the normal behavior of the foot could be quantified The group showed a surprisingly low right foot step off dominance of only 54% The combination of the radius of gyration and impulse in particular produces a succinct but powerful summary of the footprint during dynamic activity The initial angle and magnitudes of the loads that are applied and removed demonstrates that the body first rocks onto the heels after the instruction to walk is given The feet simultaneously invert and their arches rise off the ground as anticipated The principle axes were then animated in a mathematical four dimensional model The horizontal radius of gyration is on average 5 cm during heel strike but increases to 20 cm as the forefoot comes into contact with the ground finally rising to 25 cm at toe off Significantly the applied load during the fore foot loading phase is more widely distributed than the load being removed A new and unanticipated result that is believed to be a special characteristic of the animate foot The standard deviation of the force under the great toe is the first mechanical parameter to converge in the 54 subjects conclusively verifying the hypothesis that the great toe both initiates and controls gait

Handbook of Cognitive Science Paco Calvo, Antoni Gomila, 2008-08-15 The Handbook of Cognitive Science provides an overview of recent developments in cognition research relying upon non classical approaches Cognition is explained as the continuous interplay between brain body and environment without relying on classical notions

of computations and representation to explain cognition The handbook serves as a valuable companion for readers interested in foundational aspects of cognitive science and neuroscience and the philosophy of mind The handbook begins with an introduction to embodied cognitive science and then breaks up the chapters into separate sections on conceptual issues formal approaches embodiment in perception and action embodiment from an artificial perspective embodied meaning and emotion and consciousness Contributors to the book represent research overviews from around the globe including the US UK Spain Germany Switzerland France Sweden and the Netherlands The Electrical Journal ,1885 *Common School Education and Teachers World* ,1894 **Advanced Hybrid Information Processing** Guan Gui,Lin Yun,2019-11-28 This two volume set LNICST 301 302 constitutes the post conference proceedings of the Third EAI International Conference on Advanced Hybrid Information Processing ADHIP 2019 held in Nanjing China in September 2019 The 101 papers presented were selected from 237 submissions and focus on hybrid big data processing Since information processing has acted as an important research domain in science and technology today it is now to develop deeper and wider use of hybrid information processing especially information processing for big data There are more remaining issues waiting for solving such as classification and systemization of big data objective tracking and behavior understanding in big multimedia data encoding and compression of big data *Handbook of Pharmacology* Charles Wilson Greene,1914 **Conversational Informatics** Toyoaki Nishida,2008-03-11 Conversational informatics investigates human behaviour with a view to designing conversational artifacts capable of interacting with humans in a conversational fashion It spans a broad array of topics including linguistics psychology and human computer interaction Until recently research in such areas has been carried out in isolation with no attempt made to connect the various disciplines Advancements in science and technology have changed this Conversational Informatics provides an interdisciplinary introduction to conversational informatics and places emphasis upon the integration of scientific approaches to achieve engineering goals and to advance further understanding of conversation It features a collection of surveys structured around four prominent research areas conversational artifacts conversational contents conversation environment design and conversation measurement analysis and modelling Conversational artifacts shows how synthetic characters or intelligent robots use eye gaze gestures and other non verbal communicators to interact Conversational contents looks at developing techniques for acquiring editing distributing and utilising the contents that are produced and consumed in conversation Conversation environment design explains techniques for creating intelligent virtual environments and for representing individuals within a virtual environment by monitoring and reproducing their non verbal conversational behaviour Conversation measurement analysis and modelling demonstrate how conversational behaviour can be measured and analyzed Conversational Informatics will be an invaluable resource for postgraduate students and researchers in Computer Science and Electrical Engineering as well as engineers and developers working in the field of automation robotics and agents technology **Collective Agency and Cooperation in Natural and**

Artificial Systems Catrin Misselhorn, 2015-09-01 This book brings together philosophical approaches to cooperation and collective agency with research into human machine interaction and cooperation from engineering robotics computer science and AI Bringing these so far largely unrelated fields of study together leads to a better understanding of collective agency in natural and artificial systems and will help to improve the design and performance of hybrid systems involving human and artificial agents Modeling collective agency with the help of computer simulations promises also philosophical insights into the emergence of collective agency The volume consists of four sections The first section is dedicated to the concept of agency The second section of the book turns to human machine cooperation The focus of the third section is the transition from cooperation to collective agency The last section concerns the explanatory value of social simulations of collective agency in the broader framework of cultural evolution
