Human Evolution Reproduction And Morality:

Human Evolution, Reproduction, and Morality Lewis F. Petrinovich, 1998 In the first volume of his ambitious trilogy Petrinovich brings concepts from evolutionary biology neurophysiology and cognitive science to bear on such controversial issues as contraception abortion infanticide new reproductive technologies and fetal tissues research Although he bases the discussion on extensive scholarly research he does not hesitate to take a strong position on moral issues Published in cloth by Plenum Press 1995

Human Evolution, Reproduction, and Morality Lewis Petrinovich, 2014-01-15 **Moral Psychology** Walter Sinnott-Armstrong, 2008 Since the 1990s many philosophers have drawn on recent advances in cognitive psychology brain science and evolutionary psychology to inform their work These three volumes bring together some of the most innovative work by both philosophers and psychologists in this emerging collaborative field Being in Conscience: A Theory of Ethics Lambros Philippou, 2023-01-31 This book aims to suggest a worldview departing from an articulation of a theory of conscience It analyses the constitutive parts of conscience a concept that has not been thoroughly examined and analysed in the discussions on ethics Having the mechanisms of production of conscience as a point of reference the book proceeds to discuss the concepts of subjective and collective evil The concept of being in enhanced conscience aims to position the subjective conscience in human historicity Based on the analysis of the roots of conscience the subject is placed in the public sphere from the point of view of its corporeal harmony and disharmony as the conditions for its binding with the institutions and the spirit of a worldsphere The book then expands its scope by addressing the question of what makes a worldsphere functional and dysfunctional This analysis is useful for scholars who are interested in the deep structural conditions that produce and sustain a liberal democratic state Through the analysis of inner worldly and inter worldly temporality the mode of the creative rhythm is depicted by underlining the creative divergence that occurs not only within distinct worlds but also between worldspheres The mediation of this analysis introduces the concept of planetary functionality whereby what is at stake is the islands of functionality that serve the survival of an interconnected world The theory of conscience is applied also to the analysis of the state and of the economy Conscience is also identified with the properties attributed to God suggesting a new understanding of the meaning of religion and its role in human historicity Finally it argues that we should understand the future as the future of conscience that can function as the only motor of historical evolution *The Palgrave Handbook of Affect Studies and Textual Criticism* Donald R. Wehrs, Thomas Blake, 2017-12-01 This volume provides a comprehensive account of how scholarship on affect and scholarship on texts have come to inform one another over the past few decades The result has been that explorations of how texts address elicited shape and dramatize affect have become central to contemporary work in literary film and art criticism as well as in critical theory rhetoric performance studies and aesthetics Guiding readers to the variety of topics themes interdisciplinary dialogues and sub disciplinary specialties that the study of interplay between affect and texts has either inaugurated or revitalized the

handbook showcases and engages the diversity of scholarly topics approaches and projects that thinking of affect in relation to texts and related media open up or enable These include but are not limited to investigations of what attention to affect brings to established methods of studying texts in terms of period genre cultural contexts rhetoric and individual authorship

The Mating Mind Geoffrey Miller, 2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience a book that offers the most convincing and radical explanation for how and why the human mind evolved Consciousness morality creativity language and art these are the traits that make us human Scientists have traditionally explained these qualities as merely a side effect of surplus brain size but Miller argues that they were sexual attractors not side effects He bases his argument on Darwin's theory of sexual selection which until now has played second fiddle to Darwin's theory of natural selection and draws on ideas and research from a wide range of fields including psychology economics history and pop culture Witty powerfully argued and continually thought provoking *The Mating Mind* is a landmark in our understanding of our own species

Moral Virtue and Nature Stephen R. Brown, 2008-04-10 What makes someone a good human being Is there an objective answer to this question an answer that can be given in naturalistic terms For ages philosophers have attempted to develop some sort of naturalistic ethics Against ethical naturalism however notable philosophers have contended that such projects are impossible due to the existence of some sort of gap between facts and values Others have suggested that teleology upon which many forms of ethical naturalism depend is an outdated metaphysical concept This book argues that a good human being is one who has those traits the possession of which enables someone to achieve those ends natural to beings like us Thus the answer to the question of what makes a good human being is given in terms both objective and naturalistic The author shows that neither is ought gaps nor objections concerning teleology pose insurmountable problems for naturalistic virtue ethics This work is a much needed contribution to the ongoing debate about ethical theory and ethical virtue

The Cannibal Within Lewis F. Petrinovich, *The Cannibal Within* offers an evolutionary account of the propensity of human beings in extreme circumstances to eat other human beings despite the strong Western taboo against such practices What sets this volume apart from the large body of literature on cannibalism both popular and anthropological is the underlying premise cannibalism as an alternative to starvation is tacitly condoned by the same biological morality that would condemn cannibalism of other sorts in non threatening situations Deep as the taboos may be the survival instinct runs even deeper The title of the book reflects the author's belief that cannibalism is not a pathology that erupts in psychotic individuals but is a universal adaptive strategy that is evolutionarily sound The cannibal is within all of us and cannibals are within all cultures should the circumstances demand cannibalism's appearance and usage Petrinovich's work is rich in historical detail and rises to a level of theoretical sophistication in addressing a subject too often dealt with in sensationalist terms The major instances in which survival cannibalism has occurred convinced the author that there is a consistent pattern and a uniform regularity of order in which different kinds of individuals are consumed In

considering who eats whom when and under what circumstances this regularity appears and it is consistent with what would be expected on the basis of evolutionary or Darwinian theory In short he concludes that starvation cannibalism is not a manifestation of the chaotic psychotic behavior of individuals who are driven to madness but reveals underlying characteristics of evolved human beings Lewis Petrinovich is professor emeritus in the Department of Psychology of the University of California Riverside and is currently a resident of Berkeley California

Was Hitler a Darwinian? Robert J. Richards, 2013-11-06 In tracing the history of Darwin's accomplishment and the trajectory of evolutionary theory during the late nineteenth and early twentieth centuries most scholars agree that Darwin introduced blind mechanism into biology thus banishing moral values from the understanding of nature According to the standard interpretation the principle of survival of the fittest has rendered human behavior including moral behavior ultimately selfish Few doubt that Darwinian theory especially as construed by the master's German disciple Ernst Haeckel inspired Hitler and led to Nazi atrocities In this collection of essays Robert J Richards argues that this orthodox view is wrongheaded A close historical examination reveals that Darwin in more traditional fashion constructed nature with a moral spine and provided it with a goal man as a moral creature The book takes up many other topics including the character of Darwin's chief principles of natural selection and divergence his dispute with Alfred Russel Wallace over man's big brain the role of language in human development his relationship to Herbert Spencer how much his views had in common with Haeckel's and the general problem of progress in evolution Moreover Richards takes a forceful stand on the timely issue of whether Darwin is to blame for Hitler's atrocities

Was Hitler a Darwinian is intellectual history at its boldest

Living and Dying Well Lewis Petrinovich, 2013-11-11 Living and Dying Well takes an informed interdisciplinary approach to the problems data theory and procedures that a just society must consider when establishing policies regarding human life and death Leading psychologist Lewis Petrinovich expands on the controversial arguments developed in his earlier work Human Evolution Reproduction and Morality and considers such contemporary issues as the morality of human genetic screening and of the Human Genome Project organ transplants the allowance of suicide and euthanasia and physicians assisting in the dying process

Cela-Conde, Francisco J. Ayala, 2007-09-27 Human Evolution provides a comprehensive overview of hominid evolution synthesising data and approaches from fields as diverse as physical anthropology evolutionary biology molecular biology genetics archaeology psychology and philosophy The book starts with chapters on evolution population genetics systematics and the methods for constructing evolutionary trees These are followed by a comprehensive review of the fossil history of human evolution since our divergence from the apes Subsequent chapters cover more recent data both fossil and molecular relating to the evolution of modern humans A final section describes the evolution of culture language art and morality The authors are leading experts in two complementary fields of scholarship physical anthropology and molecular evolution Throughout the book they successfully integrate their expertise in evolutionary theory phylogenetics genomics cultural evolution language aesthetics and morality to produce a cutting edge textbook copiously illustrated and with an extensive and up to date bibliography It will be suitable for both senior undergraduate and graduate level students taking courses on human evolution within departments of biology anthropology psychology and philosophy The book will also appeal to a more general audience seeking a readable up to date and inclusive treatment of human origins and evolution

Evolution and the Capacity for Commitment Randolph Nesse, 2001-11-29 Commitment is at the core of social life The social fabric is woven from promises and threats that are not always immediately advantageous to the parties involved Many commitments such as signing a contract are fairly straightforward deals in which both parties agree to give up certain options Other commitments such as the promise of life long love or a threat of murder are based on more intangible factors such as human emotions In Evolution and the Capacity for Commitment distinguished researchers from the fields of economics psychology ethology anthropology philosophy medicine and law offer a rich variety of perspectives on the nature of commitment and question whether the capacity for making assessing and keeping commitments has been shaped by natural selection Game theorists have shown that players who use commitment strategies by learning to convey subjective offers and to gauge commitments others are willing to make achieve greater success than those who rationally calculate every move for immediate reward Evolution and the Capacity for Commitment includes contributions from some of the pioneering students of commitment Their elegant analyses highlight the critical role of reputation building and show the importance of investigating how people can believe that others would carry out promises or threats that go against their own self interest Other contributors provide real world examples of commitment across cultures and suggest the evolutionary origins of the capacity for commitment Perhaps nowhere is the importance of commitment and reputation more evident than in the institutions of law medicine and religion Essays by professionals in each field explore why many practitioners remain

largely ethical in spite of manifest opportunities for client exploitation Finally Evolution and the Capacity for Commitment turns to leading animal behavior experts to explore whether non humans also use commitment strategies most notably through the transmission of threats or signs of non aggression Such examples illustrate how such tendencies in humans may have evolved Viewed as an adaptive evolutionary strategy commitment offers enormous potential for explaining complex and irrational emotional behaviors within a biological framework Evolution and the Capacity for Commitment presents compelling evidence for this view and offers a potential bridge across the current rift between biology and the social sciences A Volume in the Russell Sage Foundation Series on Trust Darwinian Dominion Lewis Petrinovich,1998-11-09 The controversial subject of this book is the permissible use of animals by humans Lewis Petrinovich argues that humans have a set of cognitive abilities developing from a suite of emotional attachments that make them unique among species Although other animals can think suffer and have needs the interests of members of the human species should triumph over comparable interests of members of other species This book is the third in a trilogy concerned with the morality of various actions that affect the birth life and death of organisms Using principles of moral philosophy biology evolutionary theory neurophysiology medicine and cognitive science Petrinovich discusses such topics as fetal and prenatal development development of the mind and brain animal liberation morality and animal research the eating of animals keeping animals in zoos and as pets and the importance of biodiversity In the epilogue he summarizes the main issues and discusses the moral principles governing their resolution Altruism and Christian Ethics Colin Grant,2000-11-16 Separated from its anchorage in religion ethics has followed the social sciences in seeing human beings as fundamentally characterised by self interest so that altruism is either naively idealistic or arrogantly self sufficient Colin Grant contends that as a modern secular concept altruism is a parody on the self giving love of Christianity so that its dismissal represents a social levelling that loses the depths that theology makes intelligible and religion makes possible The Christian affirmation is that God is characterised by self giving love agape then expected of Christians Lacking this theological background the focus on self interest in sociobiology and economics and on human realism in the political focus of John Rawls or the feminist sociability of Carol Gilligan finds altruism naive or a dangerous distraction from real possibilities of mutual support This book argues that to dispense with altruism is to dispense with God and with the divine transformation of human possibilities Journal of Moral Theology, Volume 1, Number 2 David M. Hochschild,2014-01-28 Love Volume 1 Number 2 June 2012 Edited by David Matzko McCarthy and Joshua P Hochschild Love A Thomistic Analysis Diane Fritz Cates Movements of Love A Thomistic Perspective on Eros and Agape William C Mattison III Love and Poverty Dorothy Day s Twofold Diakonia Margaret R Pfeil What s Love Got to Do With It Situating a Theological Virtue in the Practice of Medicine Brian E Volck Adoption and the Goods of Birth Holly Taylor Coolman Natural Law and the Language of Love Charles Pinchas and David Matzko McCarthy Review Essay Love and Recent Developments in Moral Theology Bernard V Brady *Evolution Science*

and Ethics in the Third Millennium Robert Cliquet, Dragana Avramov, 2018-01-10 The book aims to revitalise the interdisciplinary debate about evolutionary ethics and substantiate the idea that evolution science can provide a rational and robust framework for understanding morality It also traces pathways for knowledge based choices to be made about directions for future long term biological evolution and cultural development in view of adaptation to the expected probable and possible future and the ecological sustainability of our planetary environment The authors discuss ethical challenges associated with the major biosocial sources of human variation individual variation inter personal variation inter group variation and inter generational variation This book approaches the long term challenges of the human species in a holistic way Researchers will find an extensive discussion of the key theoretical scientific aspects of the relationship between evolution and morality Policy makers will find information that can help them better understand from where we are coming and inspire them to make choices and take actions in a longer term perspective The general public will find food for thoughts

Michigan Law Review, 2000 **Natural Ethical Facts** William D. Casebeer, 2001 Naturalizing ethics has been a problematic philosophic enterprise The author attempts a synoptic reconciliation of the sciences with a naturalized conception of morality beginning with a Quinean refutation of the naturalistic fallacy and the open question argument We can improve our understanding of the nature of moral theory and its place in moral judgment by treating morality as a natural phenomenon subject to constraints from and ultimately reduced to the cognitive and biological sciences Treating morality as a matter of proper biological function partially fixed by our evolutionary history and with an emphasis on skillful action in the world now sheds light on the underlying native connectionist architecture of moral cognition The author discusses practical implications regarding the nature and form of our collective character development institutions and our methods for moral reasoning that arise from this approach reaffirming Deweyian and Aristotelian points about the importance of sociability friendship and liberal democratic forms of social organization for human flourishing **Encyclopedia of Applied Ethics**, 2012-01-10 The Encyclopedia of Applied Ethics Second Edition Four Volume Set addresses both the physiological and the psychological aspects of human behavior Carefully crafted well written and thoroughly indexed the encyclopedia helps users whether they are students just beginning formal study of the broad field or specialists in a branch of psychology understand the field and how and why humans behave as we do The work is an all encompassing reference providing a comprehensive and definitive review of the field A broad and inclusive table of contents ensures detailed investigation of historical and theoretical material as well as in depth analysis of current issues Several disciplines may be involved in applied ethics one branch of applied ethics for example bioethics is commonly explicated in terms of ethical legal social and philosophical issues Editor in Chief Ruth Chadwick has put together a group of leading contributors ranging from philosophers to practitioners in the particular fields in question to academics from disciplines such as law and economics The 376 chapters are divided into 4 volumes each chapter falling into a subject category including Applied Ethics Bioethics
