**The Literature of Education** W. Kenneth Richmond,2019-01-15 Original blurb The volume of writing on educational topics has increased so prodigiously in recent years that the student is likely to lose himself in a sea of print This may lead him to opt for the first book that comes to hand or waste time rifling through half a dozen when a thorough grasp of one key text is all that is needed Reading lists commonly look impressive not to say daunting In fact the multifarious titles conceal an enormous amount of duplication an endless raking over of other people s research findings It is a safe bet writes W Kenneth Richmond that less than 5 percent of the contents of any new book on education will be in any way original This critical bibliography originally published in 1972 is concerned with the noteworthy books and major official reports that had appeared in the English language during the twenty five years prior to publication In his introduction and in the commentaries prefacing each section the author explains the background to the genuinely new departures of the period and describes successive changes in the climate of educational opinion

**Educational Psychology** D. N. Tutoo,1998 Hobbes and Human Nature Arnold W. Green,1993-01-01 Several excellent modern books about Hobbes either focus upon his life or analyze his ideas in a technical way Green s unique treatment of the English philosopher explores how his times helped shape his basic postulates which are then linked with his personal experiences an exercise in modern relativism that Hobbes and his generation would not have appreciated Hobbes s outlook still remains more relevant to the present time than to the two intervening centuries The faith that human nature has changed with time and circumstance has waned Hobbes and Human Nature is a study in applied social theory Green discusses those issues that Hobbes either stated or provoked individuals and society as metaphor religion and atheism sovereignty and the law intellectuals and the dominance of minorities over the majority the precedence of perceived interests over ideas and the failure of history to determine human fate The standard comparison with Rousseau is made with less emphasis upon character than upon revolution and Utopian hope This volume should be of interest to philosophers historians sociologists

and political scientists It may find some place as assigned reading for undergraduate and especially for graduate students

Ceci, 2009-07-01 Ceci argues that traditional conceptions of intelligence ignore the role of society in shaping intelligence and underestimate the intelligence of non Western societies He puts forth a bio ecological framework of individual differences in intellectual development that is intended to address some of the major deficiencies of extant theories of intelligence The focus is on alternative interpretations of phenomena that emerge when implicit assumptions of intelligence researchers are challenged      Human Intelligence Harold John Butcher, 1973      *The*

*Nature of Intelligence and Its Development in Childhood* Robert J. Sternberg, 2020-12-03 In this Element I first introduce intelligence in terms of historical definitions I show that intelligence as conceived even by the originators of the first intelligence tests Alfred Binet and David Wechsler is a much broader construct than just scores on narrow tests of intelligence and their proxies I then review the major approaches to understanding intelligence and its development the psychometric test based cognitive and neurocognitive intelligence as a set of brain based cognitive representations and processes systems cultural and developmental These approaches taken together present a much more complex portrait of intelligence and its development than the one that would be ascertained just from scores on intelligence tests Finally I draw some take away conclusions      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1969

First multi year cumulation covers six years 1965 70      **A Textbook of Human Psychology** Hans J. Eysenck, G.D. Wilson, 2012-12-06 There are so many good textbooks in the field of this sense the book is more comparable to modern human psychology that anyone producing a new one textbooks of harder sciences such as physics and must have a good excuse ready to explain his physiology Theories are considered important but temerity Our reason for bringing together the various only theories that are scientific in the sense that they authors who have contributed the chapters of this continuously interact with empirically derived facts book is a very simple one Most textbooks are written Theories which seldom make contact with facts e g just for future professional psychologists i e for Jung s theory of archetypes are generally ignored students who are going to adopt psychology as their There is one other point about which we would like to be explicit Textbooks often state different theories life s work and whose main area of concentration is psychology These students are of course a very im regarding a particular phenomenon or set of phenom portant group yet psychology is becoming more and ena without giving any opinion as to which of these more important to professionals in other fields as well theories might be judged superior to the others      Connecting Leadership to the Brain Michael H. Dickmann, Nancy Stanford-Blair, 2002
