Human Links To Coastal Disasters:

Human Links to Coastal Disasters, 2002 **Coastal and Marine Hazards, Risks, and Disasters** Jean Ellis, Douglas J. Sherman, 2014-11-11 Sea and Ocean Hazards Risks and Disasters provides a scientific approach to those hazards and disasters related to the Earth's coasts and oceans. This is the first book to integrate scientific, social, and economic issues related to disasters such as hazard identification, risk analysis, and planning; relevant hazard process mechanics; discussions of preparedness, response, and recovery; and the economics of loss and remediation. Throughout the book, case studies are presented of historically relevant hazards and disasters as well as the many recent catastrophes. Contains contributions from experts in the field selected by a world-renowned editorial board. Cutting edge discussion of natural hazard topics that affect the lives and livelihoods of millions of humans worldwide. Numerous full color tables, GIS maps, diagrams, illustrations, and photographs of hazardous processes in action will be included. *Coastal Heritage and Cultural Resilience* Lisa L. Price, Nemer E. Narchi, 2018-11-24 This book explores the knowledge, work, and life of Pacific coastal populations from the Pacific Northwest to Panama. Center stage in this volume is the knowledge people acquire on coastal and marine ecosystems. Material and aesthetic benefits from interacting with the environment contribute to the ongoing building of coastal cultures. The contributors are particularly interested in how local knowledge, either recently generated or transmitted along generations, interfaces with science, conservation policy, and artistic expression. Their observations exhibit a wide array of outcomes ranging from resource and human exploitation to the magnification of cultural resilience and coastal heritage. The interdisciplinary nature of ethnobiology allows the chapter authors to have a broad range of freedom when examining their subject matter. They build a multifaceted understanding of coastal heritage through the different lenses offered by the humanities, social sciences, oceanography, fisheries, and conservation science, and not surprisingly, the arts. *Coastal Heritage and Cultural Resilience* establishes an intimate bond between coastal communities and the audience in a time when resilience of coastal life needs to be celebrated and fortified. **Handbook of Disaster Research** Havidan Rodriguez, Enrico L. Quarantelli, Russell Dynes, 2009-11-14 This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept of disaster and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow. **Coastal Planning and Management** Robert Kay, Jaqueline Alder, 2005-06-09 The first comprehensive tool kit for coastal planners and those aiming to achieve effective coastal management worldwide. *Coastal Planning and Management* provides a link between planning and management tools and thus includes all stages in the process from development through evaluation to implementation.

Drawing on examples of successful coastal planning and management from around the world the authors provide clear and practical guidelines for the people who make daily decisions about the world's coastlines *Coastal Planning and Management* is an invaluable resource for professionals in environmental and planning consultancies international organizations and governmental departments as well as for academics and researchers in the local and international fields of geography marine and environmental science marine and coastal engineering and marine policy and planning *Hazards Vulnerability and Environmental Justice* Susan L. Cutter, 2012-05-04 From Hurricane Katrina and the south Asian tsunami to human induced atrocities terrorist attacks and the looming effects of climate change the world is assailed by both natural and unnatural hazards and disasters These expose not only human vulnerability particularly that of the poorest who are least able to respond and adapt but also the profound worldwide environmental injustices that result from the geographical distribution of risks hazards and disasters This collection of essays from one of the most renowned and experienced experts provides a timely assessment of these critical themes Presenting the top selections from Susan L Cutter's thirty years of scholarship on hazards vulnerability and environmental justice the volume tackles issues such as nuclear and toxic hazards risk assessment communication and planning and societal responses Cutter maps out the terrain and draws out the salient themes with a fresh powerful introduction written in the wake of her work in the aftermath of Katrina This essential collection is ideal for professionals researchers academics and students working on hazards risk disasters and environmental justice across a range of disciplines **Facing Hazards and Disasters** National Research Council, Division on Earth and Life

Studies, Committee on Disaster Research in the Social Sciences: Future Challenges and Opportunities, 2006-09-10 Social science research conducted since the late 1970's has contributed greatly to society's ability to mitigate and adapt to natural technological and willful disasters However as evidenced by Hurricane Katrina the Indian Ocean tsunami the September 11 2001 terrorist attacks on the United States and other recent events hazards and disaster research and its application could be improved greatly In particular more studies should be pursued that compare how the characteristics of different types of events including predictability forewarning magnitude and duration of impact affect societal vulnerability and response This book includes more than thirty recommendations for the hazards and disaster community **Mennonite Disaster Service** Brenda Phillips, 2013-11-05 In the aftermath of a traumatic disaster Mennonite Disaster Service arrives to help Established in 1950 associated volunteers have gone into devastated communities to pick up debris muck out homes and launch rebuilding efforts These volunteer efforts have succeeded in building more than homes however Called the therapeutic community by disaster researchers acts of volunteerism can generate healing moments Though most studies see such therapeutic effects happening right after disasters this ethnographic study looks at long term recovery assistance Such extensive commitment results in beneficial consequences for survivors and their communities For Mennonite Disaster Service volunteers serving others reflects deeply upon their historic roots cultural traditions and theological belief system In contrast to the corrosive

blaming that erupted after hurricane Katrina and feelings of neglect by those who experienced Rita and Ike the arrival and long term commitment of faith based volunteers restored hope This volume describes and explains how Mennonite Disaster Service organized efforts for the 2005 and 2008 Gulf Coast storms following a well established tradition of helping their neighbors Based on deeply ingrained religious beliefs volunteers went to the coast for weeks sometimes months and often returned year after year The quality of the construction work coupled with the meaningful relationships they sought to build generated trusting partnerships with communities struggling back from disaster Based on five years of volunteer work by Mennonite Disaster Service this volume demonstrates best practices for those who seek to do the same **Koenig and Schultz's Disaster Medicine** Kristi L. Koenig, Carl H. Schultz, 2016-04-18 This is the definitive reference on disaster medicine outlining areas of proficiency for health care professionals handling mass casualty crises Environmental Hazards and Resilience Dennis J. Parker, Edmund C. Penning-Rowsell, 2021-08-26 Building resilience to the world s increasingly damaging environmental hazards has become a priority This book considers the scientific advances which have been made around the world to enhance this resilience Although resilience is not new it is through the idea of resilience that governments organisations and communities around the world are now seeking to address the rapidly increasing losses that environmental hazards cause so that fewer lives are lost and damage is reduced Alternative ideas and approaches have been helpful in reducing loss but resilience offers a fresh and potentially effective means of reducing it further Adopting a scientific approach and scientific evidence is important in applying the resilience idea in hazard mitigation However the science of resilience is at an immature stage of development with much discussion about the concept and how it should be understood and interpreted Building useful theories remains a challenge although some of the building blocks of theory have been developed More attention has been given to developing indicators and frameworks of resilience which are subsequently applied to measure resilience to hazards such as flooding earthquake and climate change Environmental Hazards and Resilience Theory and Evidence considers the scientific and theoretical challenges of making progress in applying resilience to environmental hazard mitigation and provides examples from around the world including the USA New Zealand China Bangladesh and elsewhere The chapters in this book were originally published in the Environmental Hazards A Geospatial Framework for the Coastal Zone National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Mapping Science Committee, Committee on National Needs for Coastal Mapping and Charting, 2004-06-17 The coastal zone is of enormous importance to the well being of the nation as our lives and economy are inextricably linked to the features and activities that occur within this dynamic region In order to understand and address the effects of natural and anthropogenic forces in the coastal zone a holistic multidisciplinary framework is required to account for the interconnectivity of processes within the system The foundation of this framework is accurate geospatial information information that is depicted on maps and charts A Geospatial Framework for the Coastal Zone National Needs identifies and

suggests mechanisms for addressing national needs for spatial information in the coastal zone It identifies high priority needs evaluates the potential for meeting those needs based on the current level of effort and suggests steps to increase collaboration and ensure that the nation s need for spatial information in the coastal zone is met in an efficient and timely manner Mitigation of Natural Hazards and Disasters C. Emdad Haque,2005-11-07 Practitioners in natural hazards reduction and policy makers in climatic change and natural hazards management **Geophysical Hazards** Tom Beer,2010-06-25 The International Year of Planet Earth IYPE was established as a means of raising worldwide public and political awareness of the vast though frequently under used potential the Earth Sciences possess for improving the quality of life of the peoples of the world and safeguarding Earth s rich and diverse environments The International Year project was jointly initiated in 2000 by the International Union of Geological Sciences IUGS and the Earth Science Division of the United Nations Educational Scientific and Cultural Organisation UNESCO IUGS which is a Non Governmental Organisation and UNESCO an Inter Governmental Organisation already shared a long record of productive cooperation in the natural sciences and their application to societal problems including the International Geoscience Programme IGCP now in its fourth decade With its main goals of raising public awareness of and enhancing research in the Earth sciences on a global scale in both the developed and less developed countries of the world two operational programmes were demanded In 2002 and 2003 the Series Editors together with Dr Ted Nield and Dr Henk Schalke all four being core members of the Management Team at that time drew up outlines of a Science and an Outreach Programme In 2005 following the UN proclamation of 2008 as the United Nations International Year of Planet Earth the Year grew into a triennium 2007 2009 **Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises** National Research Council,Division of Behavioral and Social Sciences and Education,Committee on Population,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on the Effective Use of Data, Methodologies, and Technologies to Estimate Subnational Populations at Risk,2007-07-01 Worldwide millions of people are displaced annually because of natural or industrial disasters or social upheaval Reliable data on the numbers characteristics and locations of these populations can bolster humanitarian relief efforts and recovery programs Using sound methods for estimating population numbers and characteristics is important for both industrialized and developing nations Ensuring that the data are geographically referenced for projection onto maps is essential However good data alone are insufficient Adequate staff training and strong organizational and political desire to maintain and use the information are also required **Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises** reviews the main methods and tools for making estimates of subnational populations and makes several recommendations to improve the collection and the use of population data for emergency response and development Southeastern Geographer David M.
